## SECTION XXVI. LOCAL GOVERNMENT.

### § 1. Introduction.

1. **Early History of Local Government.**—In the previous issues of this book, a description was given of the systems of Local Government and their development in the several States of the Commonwealth, and at the same time a comparison was made between the Australian and Continental systems. The early history of Local Government in Australia was also dealt with. Owing, however, to considerations of space, these matters have been omitted from the present volume, and the reader is referred to Year Book No. 5, pages 972 to 975.

### § 2. Local Government Systems.

1. **New South Wales.**—(i.) *Development of Local Government.* The history of Local Government in New South Wales has been given in previous issues of this book (see No. 6, page 966). It is not intended to repeat the information in this issue.

(ii.) *Present System of Local Government.* The law relating to local government in New South Wales is now contained in the Acts of 1906, 1907, and 1908. Practically the whole of the State, with the exception of the Western Division, has been brought under the operation of these Acts.

(a) *Areas Incorporated.* Prior to the year 1907 the total area incorporated formed a very small part of the whole area of the State, as may be seen in the following statement:—

#### AREAS INCORPORATED IN NEW SOUTH WALES, 1860 to 1906.

|                             |     |     |       |       |       |       |       |       |

| Area incorporated—sq. miles | ... | ... | 409   | 649   | 1,482 | 2,387 | 2,763 | 2,830 |

*Total area of State (exclusive of Lord Howe Island), 310,367 square miles.*

The areas incorporated in 1906 in each of the three territorial divisions of the State were as follows:—

#### DISTRIBUTION OF INCORPORATED AREAS, 1906.

| Division. |     |           | Incorporated Area. | Unincorporated Area. | Total Area. |
|-----------|-----|-----------|--------------------|----------------------|-------------|
| Eastern   | ... | Sq. miles | 1,977              | 93,742               | 95,719      |
| Central   | ... | "         | 571                | 88,579               | 89,150      |
| Western   | ... | "         | 282                | 125,216              | 125,498     |
| Total     | ... | ...       | 2,830              | 307,537              | *310,367    |

\* Total area of State, exclusive of Lord Howe Island, the area of which is 5 square miles.

The total area incorporated under the Local Government Act 1906, to the end of the year 1912, was 183,569 square miles, of which 180,567 square miles were comprised within shires and 3002 within municipalities. The areas incorporated comprise the whole of the eastern and central divisions of the State, with the exception of Lord Howe Island, the islands in Port Jackson, and the quarantine station at Port Jackson.

(b) *General.* The above Act came into operation on the 1st January, 1907; it provided for the continuation of existing shires and municipalities, for the creation of new ones, and for their reconstitution by uniting, dividing, altering, or converting areas. Each shire is divided into three ridings, and each municipality may be divided into wards by petition of the council or a majority of the ratepayers to the Governor. The coun

consist, in the case of shires, of either six or nine councillors, and in the case of municipalities, of from six to twelve aldermen. A summary of the functions of councils, their powers and duties, together with a detailed statement of rates and ratable property, will be found in previous issues of the Year Book. (See Year Book No. 5, pages 977 to 979.)

(c) *Endowment.* Government endowments to shires are fixed every third year, and the amount is determined according to the extent of the shire, the probable revenue from a rate of 1d. in the £, the necessary expenditure, the extent of roads and other public works to be constructed and maintained, and other matters. The endowment in any year is paid on the basis of the amount of general rates collected in the preceding year. At the end of 1911 the endowments to be paid during the triennium 1912-15 were fixed. The classification for the period mentioned is as follows :—

#### NEW SOUTH WALES.—ENDOWMENT OF SHIRES, CLASSIFICATION, 1912-15.

| Class.   | 1st. | 1st. | 2nd. | 3rd. | 4th. | 5th. | 6th. |
|--|------|------|------|------|------|------|------|
| No. of Shires ... ..                                     | 54   | 59   | 7    | 5    | 3    | 5    | 1    |
| Endowment received in the £ on general rate ... .. Up to | *    | 10s. | 15s. | 20s. | 25s. | 30s. | †    |

\* No endowment. † Not less than 40s. in the £ on the general rate.

It is also provided that all municipalities not receiving statutory endowment under any Act repealed by the Act of 1906 shall, upon the result of investigations made into their administration and financial necessities, be entitled to a sum not exceeding three shillings and fourpence in the pound on the general rate collected; but if the revenues are sufficient to meet the reasonable requirements of the corporation under proper management no endowment will be paid.

(iii.) *Shires, 1912.*—The total area of the 134 shires constituted under the new system is 180,567 square miles, and the population on the 31st December, 1912, was 632,570.

The shires vary in area from 36 square miles in the case of Ku-ring-gai, immediately north of the metropolis, to 5730 square miles in the case of Lachlan in the Condonbolin district.

(a) *Valuation and Rates Levied.* The unimproved capital value of the shires in 1912 was £97,461,454, as against £94,189,939 in the preceding year. It is not possible to give the improved capital value or the assessed annual value, as the shires are not compelled to make these valuations, and in many cases do not make them. The total amount of all rates levied was £524,485.

(b) *Revenue.* The principal heads of revenue for the five years since the new Act came into force are shewn in the following table :—

#### NEW SOUTH WALES.—INCOME OF SHIRES, 1908 to 1912.

| Particulars.*                      | 1908.          | 1909.          | 1910.          | 1911.          | 1912.          |

| <b>Total ...</b>                   | <b>£455,420</b> | <b>Total ...</b>                   | <b>£455,420</b> |

\* Including saleyards, pounds, baths, public watering-places, ferries, wharves, etc.

(iv.) *Municipalities.* Including the City of Sydney there are 190 municipalities in New South Wales; of these forty are in the suburbs of Sydney and twelve in the district of Newcastle and suburbs. Since the 1st January, 1908, under the Local Government Act 1906, municipalities must levy a general rate on the unimproved capital value of all ratable land, and may levy additional general, special, local, or loan rates on either the unimproved or improved capital value. Municipal rates are therefore no longer charged on the annual value; the only rates based on that value are those charged by the Metropolitan and Hunter River Water Supply and Sewerage Boards.

(a) *Capital Value, Area, Population, and Rates Levied.* The following table shews the improved capital value, the area, population, number of buildings, and amount of rates levied in municipalities for the years 1901 and 1908 to 1912:—

**NEW SOUTH WALES.—MUNICIPALITIES, IMPROVED CAPITAL VALUE, AREA, POPULATION, NUMBER OF BUILDINGS, AND TOTAL RATES LEVIED, 1901 and 1908-12.**

(b) *Revenue.* The Local Government Act 1906 prescribed that there should be a general fund in each local government area (municipality and shire), and also special funds for specified purposes. The regulations under the Act prescribed the system of accounts to be kept. This system differs materially from the old "cash" system of receipts (cash actually received) and disbursements (cash actually expended).

Prior to 1908 the municipal year ended on the first Monday in February; now it ends on the 31st December. In all statements of municipal accounts for the year 1908, therefore, the period referred to is from the 4th February to the 31st December, except in the City of Sydney, which does not come under the provisions of the Act of 1906 and where the accounts are kept for the calendar year. The first complete year for which financial particulars are available for the municipalities is the year 1909. Particulars of revenue for the year 1912 are given in the following table :—

## NEW SOUTH WALES.—MUNICIPALITIES, REVENUE, 1912.

| Particulars.                        | Sydney.  | Suburbs. | Country. | Total.    |
|-------------------------------------|----------|----------|----------|-----------|

| Deduct transfers* ... ..            | ...      | 37,258   | 28,309   | 65,567    |
| Net revenue ... ..                  | 718,018† | 594,754  | 751,499  | 2,064,271 |

\* Transfers from various funds to loan funds for principal, interest, and capital expenditure. † The city of Sydney accounts are kept on a cash basis, i.e., they shew actual receipts and disbursements; the accounts of municipalities operating under the Local Government Act shew total revenue and expenditure for the year. Items of receipts and disbursements for the city of Sydney cannot be allocated to the different headings shewn for municipalities. † Exclusive of Sydney.

(c) *Expenditure.* Reference has already been made to the system of accounts prescribed by the Local Government Act 1906 (see paragraph (b) hereof). The following table gives particulars of expenditure of municipalities for the year 1912:—

## NEW SOUTH WALES.—MUNICIPALITIES, EXPENDITURE, 1912.

| Particulars.                        | Sydney.  | Suburbs. | Country. | Total.    |

† See note † to first table on this page. † See note † to first table on this page.

2. **Victoria.**—(i.) *Development of Local Government.* In Victoria there are now two types of municipal institutions, (a) boroughs, including cities and towns, and (b) shires, and although they are now dealt with by the same Act, their origin was distinct, and in the early days of their development they were provided for by independent enactments. Melbourne and Geelong, the latter of which was for many years the second largest town in the State, having been incorporated under special statutes prior to the establishment of a general system of local government, are not subject to the provisions of the Local Government Acts except in a few comparatively unimportant details. Melbourne was incorporated as a town in 1842, and as a city in 1847; Geelong was incorporated as a town in 1849, and proclaimed a city on 14th December, 1910.

The earlier history of legislation in Victoria relative to Local Government, more especially with reference to the institution of Road Districts, their displacement by Shires, and the constitution of Urban Municipal Districts and Boroughs, has been fully dealt with in previous issues. (See Year Book No. 5, p. 992.)

(ii.) *Present System of Local Government.* Local government is now administered under the Act of 1903 throughout the whole of the State, with the exception of about 6000 square miles in the mountainous parts of the county of Wonnangatta, and the whole of French Island.

(a) *Constitution of Municipalities.* Provision is made for the continuation of municipalities established under previous Acts and for the constitution of new ones.

Definitions of shires, boroughs, and townships have been given in previous issues of this book (see Year Book No. 6, page 978), together with the conditions necessary for their constitution.

(b) *Municipal Councils, etc.* Considerations of space prevent more than a passing reference to the following subjects, which were dealt with in previous issues of this book:—The constitution of municipal councils, their functions and powers, including the power of raising loans, the qualifications necessary for the exercise of the municipal franchise, and the definition of ratable and unratable property. (See Year Book No. 5, pp. 994 to 996.)

(c) *Endowment.* The legislation dealing with municipal endowment prior to 1907 is referred to in previous issues. (See Year Book No. 5, p. 996.) In 1907, under the Municipal Endowment and Reclassification of Shires Act of that year, a new classification was adopted under which the amount of the endowment is to be allocated. In addition to the endowment of £75,000 (increased to £100,000 from the 1st July, 1907), the municipalities received from the Government during the financial year 1912-13 a sum of £80,996 out of the Licensing Act Fund as the equivalent for (a) fees for licenses, (b) fees for the registration of brewers and spirit merchants, and (c) fines, penalties, and forfeitures incurred under the Licensing Act 1876. Under the Act of 1907 the endowment of £100,000 is payable in equal moieties in March and September of each year. No city or town is entitled to receive any part of the endowment. The distribution amongst the boroughs and shires is based on the amount of general and extra rates received in the twelve months ending on the preceding 30th September according to the following scale:—

#### VICTORIA.—ENDOWMENT OF BOROUGHS AND SHIRES, 1912-13.

|   |  |
|---|--|
| To every Borough or 1st Class Shire, 3s. in the £ | To every 4th Class Shire, 8s. in the £ |
| “ “ 2nd Class Shire 5s. “ “                       | “ 5th “ 10s. “ “                       |
| “ “ 3rd “ “ 6s. “ “                               | “ 6th “ 12s. “ “                       |

For the three financial years commencing the 1st July, 1907, however, the amounts were definitely fixed by Act No. 2129, and for the financial years 1910-11, 1911-12, and 1912-13 by Acts No. 2267, 2334, and 2404 respectively.

(iii.) *Boroughs and Shires.*—*Number, Population, and Value of Ratable Property.*—The following table shews the number of cities, towns, boroughs, and shires, their estimated

population, the number of ratepayers and dwellings, and the value of ratable property for the years 1901 and 1909-13 inclusive :—

**VICTORIA.—PARTICULARS OF MUNICIPALITIES, 1901 and 1909-13.**

| Financial Year.               | Number of Municipalities. | Estimated Population. | Number of Ratepayers (both sexes). | Estimated Number of Dwellings. | Estimated Value of Real Property. |             |
|-------------------------------|---------------------------|-----------------------|------------------------------------|--------------------------------|-----------------------------------|-------------|

| Other expenditure ... ..                  | 103,403   | 187,830   | 173,154   | 170,840   | 187,514   | 129,190   |
| Total ... ..                              | 1,330,004 | 1,677,836 | 1,678,760 | 1,785,616 | 1,870,466 | 2,051,106 |

3. *Queensland.*—(i.) *Development of Local Government.* The existing scheme of local government in the State of Queensland is regulated by the provisions of the Local Authorities Act 1902, with its amendments in 1903, 1905 and 1910. A summary of these Acts and of the earlier legislation under which the system of local government in Queensland was inaugurated and developed, will be found in previous issues of this book (see Year Book No. 5, p. 1013).

(ii.) *Present System of Local Government.*—The principal features of previous enactments as to the division of the State into local areas are retained in the Acts of 1902 and 1910, but such areas are in future to be of two classes—(a) towns and (b) shires. All municipalities formerly constituted as boroughs become towns, except Brisbane, Rockhampton, and Townsville, which are declared to be cities, and all shires and divisions become shires. The Governor-in-Council may, after giving notice in the *Gazette*, constitute, unite, divide, or abolish areas for the purpose of forming new areas, and may by proclamation constitute a town or city.

(a) *The Municipal Council.* All local areas are governed by councils, the members of which are called aldermen in the case of cities and towns, and councillors in the case of shires. *City and town councils* are composed of either seven, nine, or eleven members, as declared by Order-in-Council, but if the local authority has wards, three members are assigned to each ward. *Shire councils* are composed of five, seven, or nine members, as declared by Order-in-Council, but if the shire is divided the number cannot be more than three for each division, and need not be the same for every division.

In previous Year Books allusion has been made at some length to the powers and duties of municipal councils, as well as to loans, valuation, rates and tramway areas. It is not proposed to repeat this information in the present issue.

(b) *Qualification of Voters.* Generally, every person of either sex of the age of twenty-one, who is a natural-born or naturalised subject, and is rated as an occupier or owner of ratable land, is entitled to vote. The number of votes depends upon the value of the land in the following scale:—

#### QUEENSLAND MUNICIPALITIES.—PLURALITY OF VOTES.

|                 |     |                 |                     |                    |
|-----------------|-----|-----------------|---------------------|--------------------|
| Value of land   | ... | Less than £500. | From £500 to £1000. | £1000 and upwards. |
| Number of votes | ... | 1               | 2                   | 3                  |

In the case of joint owners or occupiers, each is to be considered the owner or occupier of land of a value equal to that of the whole divided by the number of owners or occupiers not exceeding three. If more than three persons are joint owners or occupiers, those whose names stand first on the rate book or valuation or return are to be taken. Companies may nominate their secretaries, managers, or directors for the purpose of voting.

(iii.) *Area, Population, Number of Dwellings, Rates, Assets and Liabilities of Cities, Towns and Shires.*—The following table gives particulars of the area, population, number of inhabited tenements, assets and liabilities of cities and towns, and of shires, for each year from 1908 to 1912:—

#### QUEENSLAND.—PARTICULARS OF CITIES AND TOWNS AND SHIRES, 1908 to 1912.

| Year. | Municipality.    | Area.         | Population. | Number of Inhabited Dwellings. | Capital Value. | Assets.   | Liabilities.      |         |           |
|-------|------------------|---------------|-------------|--------------------------------|----------------|-----------|-------------------|---------|-----------|
|       |                  |               |             |                                |                |           | Government Loans. | Other.  | Total.    |
|       |                  | Square Miles. | No.         | No.                            | £              | £         | £                 | £       | £         |
| 1908  | Cities and Towns | 354           | 236,388     | 45,430                         | 13,745,293     | 1,372,525 | 279,194           | 745,300 | 1,024,494 |

\* Including interest on loans.

4. *South Australia.*—(i.) *Development of Local Government.* In the latter part of 1839 the first municipal law was passed in South Australia, which was thus the birthplace of municipal government in the Commonwealth. On the 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council, consisting of nineteen members, and the system has since been extended throughout the settled parts of the State by the formation of district councils and municipal corporations, which are the two types of local authorities now in existence.

(ii.) *District Councils.* The first District Councils Act was passed in 1858, was amended in 1862, and was further amended and consolidated by the District Councils Act of 1876, which provided for the continuation of existing districts and for the establishment of new ones by proclamation on the petition of the ratepayers. The revenue of the councils consisted of rents, profits, and income from lands vested in the councils or over which the council had the control and management; fines and penalties enforced under the Act; fees for licenses; and general and special rates and loans. Provision was made for the election of councillors, their number, qualification, and retirement; for the election of auditors; the meetings, powers and functions of councils; the appointment of constables; revenue and expenditure; assessment of rates; and for making by-laws for various purposes. The Act of 1876 was amended from time to time, and was finally amended and consolidated by the Act which is now in force, namely, the District Councils Act 1887, which has in turn been amended in the years 1889, 1890, 1897, 1904, and 1905. These Acts were again amended by the Local Government Act 1910.

The powers and duties of district councils, together with the qualification necessary for councillors and electors, have been given *in extenso* in previous issues.

(iii.) *Municipalities.* Municipalities were first established under the Municipal Corporations Act of 1861, which, after providing for the extension of the powers and duties of the Corporation of the City of Adelaide, authorised the Governor, on petition of a majority of not less than two-thirds of the property-owners, to constitute any town, district, or place within the province, into a municipality. This Act and its amendments were consolidated in the Municipal Corporations Act 1880, which was amended from time to time until the year 1890, when it was repealed and its provisions consolidated by the existing Act, the Municipal Corporations Acts of 1890, which was in turn amended in 1893, 1896, and 1903. These Acts were again amended by the Local Government Act 1910.

A brief description of the Municipal Corporations Act of 1890, as well as the functions of municipal councils will be found in previous issues of this book.

(iv.) *Finances of District Councils and Corporations.* The subjoined tables shew the amounts of assessments and the revenue and expenditure of district councils and of corporations for the financial years 1901 and 1908 to 1912; the figures given are exclusive of the Main Roads Funds, particulars as to which may be found in the section of this book on "Roads and Bridges."

\* Up to and including the year 1903, the financial year for Corporations ended on the 31st December, but after that date ends on the 30th November. The financial year for district councils ends on the 30th June.

5. *Western Australia.*—(i.) *Types of Local Authorities.* In this State there are three forms of local authorities, namely :—(i.) Municipalities, (ii.) Road Districts, and (iii.) Local Boards of Health. The first Municipalities Act was passed in 1871, but only a few districts were incorporated under it. In 1895 a more comprehensive measure, the Municipal Institutions Act, was passed, and after being amended from time to time was consolidated by the Municipal Institutions Acts 1902 and 1904. In 1906 the most recent enactment, the Municipal Corporations Act, was passed, repealing and consolidating previous enactments. The whole area of the State outside incorporated municipalities is divided into road districts, which are administered under the Roads Act 1902 and 1904. In municipalities the councils act as Health Boards for the purpose of administering the Public Health Act, while outside municipalities local Boards of Health may

be formed. In 1904, another local government measure, the Water Boards Act, was passed, under which Boards may be appointed for the control of waterworks, and rates may be levied for the purpose, the maximum being fixed at two shillings in the pound of ratable value.

(ii.) *Municipalities.* These are now regulated by the Municipal Corporations Act, which came into force on the 1st January, 1907. Provision is made for the continuation of existing municipalities, and the Governor is authorised to constitute new municipalities on petition signed by at least fifty property-holders of the district proposed to be incorporated; to unite adjoining municipalities on petition under their common seals; to sever any portion from a municipality on petition signed by a majority of the ratepayers, and to annex such portion to a contiguous municipality or road district.

(a) *Municipal Councils* consist of a mayor and councillors, the number of which depends upon the population of the municipality; if the population is less than 1000 there are six councillors, if from 1000 to 5000 there are nine councillors, and if the population is over 5000 there are twelve councillors, or three for each ward. Any male ratepayer of the age of twenty-one years, if a natural born or naturalised subject, is eligible for election as mayor or councillor, except ministers of religion, uncertificated bankrupts, prisoners, and certain other persons who may be disqualified on the ground of interest.

The duties and powers of municipal councils, the levying of rates, the qualification of voters and the classification of municipalities in Western Australia are fully referred to in previous issues. (Year Book No. 5, p. 1025.) Consideration of space prevents their inclusion in this edition.

(b) *Government Subsidies.* Grants are made annually to municipalities by way of subsidies on the amounts of rates collected. To entitle any council to participate in the allocation of the annual Parliamentary vote the council must have levied a minimum general rate of one shilling in the pound, and must have collected not less than £300 from such rate. Newly-constituted municipalities are, during the first year of existence, dealt with apart from the provisions of the general scheme, and are allowed a subsidy of £2 for every £1 of general rate collected; in subsequent years they participate according to the general provisions. No subsidy is paid on income from general rates exceeding £3000.

(iii.) *Area, Population, etc. of Municipalities.* Returns regarding the area, population, and valuation of municipalities are defective. They are shewn in the table hereunder:—

\* Including bank balance, cash in hand, and fixed deposit. † Incomplete.

(vi.) *Road Districts.* The whole area of the State, outside incorporated municipalities, is divided into districts, the executive powers being vested in elective boards. These districts were originally formed solely for the purpose of controlling roads and bridges, but their powers and duties have been extended, so that at the present time they correspond closely to the shires of the other States of the Commonwealth. The enactments at present governing the administration of the Road Boards are the Roads Act 1911, the Parks and Reserves Act, the Cattle Trespassing Act, the Width of Tyres Act, the Cart and Carriage Licenses Act, and the Dog Act. The general powers and duties of the Boards are described in previous issues of this book.

(vii.) *Boards of Health.* These may be established under the Public Health Act 1911, which came into force on the 1st June, 1911, either within or outside of municipal boundaries. In the former case the Act is administered by the municipal councils, while in the latter case districts whose borders are conterminous with road districts are administered by the local authorities. Those not conterminous with road districts are administered by special Boards. The revenue of these Boards consists chiefly of moneys received

from health rates and sanitary fees, and the largest item of expenditure is directly connected with the sanitary service. The following table shews particulars of the receipts and expenditure of the various Boards—both municipal and extra-municipal—during the years 1901 and 1908 to 1912 :—

**WESTERN AUSTRALIA.—RECEIPTS AND EXPENDITURE OF LOCAL HEALTH  
BOARDS, 1901 and 1908-12.**

1. Exclusive of 10 boards which did not furnish returns, and 14 boards which were non-active.  
 2. Exclusive of 1 board which furnished no returns and 22 boards which were inactive. 3. Exclusive of 15 non-active boards and 1 that sent in no return. 4. Including sanitary rates, £17,707.  
 5. Including sanitary rates, £16,804. 6. Including sanitary rates, £17,986. 7. Including sanitary rates, £17,427. 8. Including sanitary rates, £18,342. 9. Including sanitary fees and charges, £13,341. 10. Including sanitary fees and charges, £50,617. 11. Including sanitary fees and charges, £53,790. 12. Exclusive of expenditure of one extra-municipal board.

On the 31st October, 1912, there were thirty-eight Local Boards of Health within municipalities, and on the 30th June, 1912, eighty-seven extra-municipal Boards. In and after 1911, the financial year of Municipal Local Health Boards ended 31st October, and that of extra-municipal Boards, 30th June.

6. *Tasmania.*—(i.) *Development of Local Areas.* In this State the city of Hobart was incorporated by special Act in the year 1852, but it was not until 1858, when the Rural Municipalities Act was passed, that a general scheme for the establishment of municipalities was extended throughout the State. This Act was amended from time to time without, however, altering its chief characteristics. In 1869 a Roads Act was passed, and after being amended at various times was consolidated in 1884. Under the provisions of these Acts parts of the State were placed under the control of Town Boards and Road Trusts. The general rate under the Municipalities Act was limited to one shilling and sixpence in the pound of annual value, while special rates could be levied in rural districts, provided that the general and special rates together did not exceed one shilling and sixpence in the pound.

(ii.) *Acts now in Force.* In 1906 the whole of the Acts dealing with local authorities were amended and consolidated by the Local Government Act of that year. The whole State, with the exception of the urban municipalities of Hobart and Launceston, is divided into municipal districts, and every Rural Municipality, Town Board, Main Road District, Road District, Local Health District, Fruit District, Rabbit District, School District, and Public Recreation Ground District included in any municipality established by the Act is abolished. Each district is incorporated and is under the control of a warden and councillors, who, in addition to the specific duties and powers imposed and conferred by the Act of 1906, are vested with powers and authorities under the following Acts :—The Codlin Moth Act 1888, the Rabbits Destruction Act 1889, the Public Health Act 1903, the Education Act 1885, the Roads Act 1884, the Rural Municipalities Act 1865, the Police Act 1905, the Town Boards Act 1896, the Public Recreation Grounds Act 1888, the Cemeteries Act 1865, and the Californian Thistle Act 1883. The Governor is authorised to unite, subdivide, or abolish municipalities or wards on petition, and may

do so without petition if in any municipality there is at any time no council or an insufficient number of councillors to form a quorum. The Act of 1906 was amended in 1908, and again in 1911.

(a) *Formation of Councils.* In the case of municipalities not divided into wards the council is to consist of the number of members, being a multiple of three, assigned to it by the Governor, while the councils of municipalities which are subdivided consist of three councillors for each ward. Any resident elector is eligible to act as a councillor unless he is disqualified as being an interested person, a bankrupt or convict, or as undergoing a sentence of imprisonment, or as insane. The warden is elected by the councillors from their own body.

The functions of councils, their borrowing powers, the levying of rates, and the constitution of local and water districts have been referred to in detail in previous issues.

(b) *Qualification of Electors.* Both owners and occupiers of property within a municipality are allowed plurality of votes according to the following scale:—

|                          |            |             |              |               |               |                   |
|--------------------------|------------|-------------|--------------|---------------|---------------|-------------------|
| Annual Value of Property | Under £30. | £30 to £80. | £80 to £160. | £160 to £240. | £240 to £360. | £360 and upwards. |
| Number of Votes          | 1          | 2           | 3            | 4             | 5             | 6                 |

In the case of joint owners or occupiers the number of votes according to the above scale is equally divided as far as possible, and the vote or votes which cannot be so divided may be given by such one of the joint owners or occupiers as may be appointed by the others. The provisions of the Acts relating to voting by post at parliamentary elections may be made applicable to any municipal election on the petition of the council to the Governor.

(iii.) *Annual Value, Revenue, and Expenditure of Municipalities.*—The following table shews the annual value, total receipts, and expenditure of municipalities for the years 1908 to 1912 inclusive:—

**TASMANIA.—ANNUAL VALUE, REVENUE, AND EXPENDITURE OF MUNICIPALITIES,  
1908 to 1912.**

| Year. | Number of Municipalities. | Annual Value of Ratable Property. | Revenue     |            |                      |         | Expenditure.† |
|-------|---------------------------|-----------------------------------|-------------|------------|----------------------|---------|---------------|
|       |                           |                                   | From Rates. | From Govt. | From other Sources.* | Total.  |               |
|       |                           | £                                 | £           | £          | £                    | £       | £             |
| 1908  | ...                       | 51, 1,340,243                     | 142,466     | 40,254     | 186,466              | 369,186 | 353,699       |
| 1909  | ...                       | 51, 1,404,328                     | 173,453     | 44,293     | 92,244               | 309,990 | 318,501       |
| 1910  | ...                       | 51, 1,459,917                     | 147,750     | 35,616     | 87,994               | 271,360 | 266,108       |
| 1911  | ...                       | 51, 1,492,533                     | 150,233     | 35,215     | 88,365               | 280,165 | 307,334       |
| 1912  | ...                       | 51, 1,524,789                     | 159,290     | 26,051     | 107,935              | 293,276 | 276,794       |

\* Including sums derived from loans. † Including repayments of loans.

According to the latest estimate made by the Commissioner of Taxes the capital value of ratable property in 1911 was £30,924,993.

(iv.) *Total Revenue and Expenditure of Local Bodies.*—Particulars as to Road Boards and Road Trusts are given in the chapter of this book on "Roads and Bridges." In addition to the local authorities already mentioned, Marine Boards have been established at seven ports in Tasmania for the purposes of constructing and maintaining wharves and jetties and of controlling all matters relating to the shipping in the respective ports. Twenty water trusts and forty cemetery trusts have also been established in connection with municipal bodies. The subjoined statement shews the total revenue and expenditure for all local bodies, exclusive of all amounts contributed by the General Government, during each financial year from 1910 to 1913 inclusive:—

**TASMANIA.—REVENUE AND EXPENDITURE OF ALL LOCAL BODIES, EXCLUSIVE OF AMOUNTS CONTRIBUTED BY THE GENERAL GOVERNMENT, 1910 to 1913.**

| Particulars.                  |     |     |     |     | 1909-10. | 1910-11. | 1911-12. | 1912-13. |

\* Exclusive of amounts contributed by the general Government. † Exclusive of expenditure from Government contributions. ‡ Included in municipalities under the new Local Government Act. § Exclusive of a number of cemetery trusts incorporated in the newly organised municipalities.

### § 3. Water Supply, Sewerage and Drainage.

1. **New South Wales.**—(i.) *Sydney Metropolitan Board of Water Supply and Sewerage.* Prior to the year 1888 the main water supply and sewerage systems of Sydney and suburbs were under the control of the City Corporation, while several of the suburban councils had constructed local systems, but in that year the Government, with the object of placing the administration of both water supply and sewerage systems throughout the County of Cumberland under the control of an independent body, passed an Act authorising the establishment of the Metropolitan Board of Water Supply and Sewerage. This Board consists of seven members, three of whom are appointed by the Government, two by the City Council, and two by the suburban and country municipalities in the County of Cumberland. The Board is under the general supervision of the Minister for Works—a provision considered necessary since the loan expenditure of the Board forms part of the public debt of the State.

(a) *Present System.* In the year 1850 authority was given by the Legislative Council to the City Corporation to construct water and sewerage works. Under this authority a water supply scheme was adopted and carried out, at a cost of nearly £1,750,000, by which the waters of the streams draining into Botany Bay were intercepted and pumped into three reservoirs. This system has now been superseded, the metropolitan water supply being at present obtained from the watersheds of the Nepean, Cataract, and Cordeaux Rivers. The principal reservoirs in connection with the scheme are the “Cataract” and “Prospect” dams. A fuller description of these dams will be found in previous issues of this book (see Year Book No. 5, p. 984), but their dimensions are here given :—

## SYDNEY WATER SUPPLY.—CATARACT AND PROSPECT DAMS.

| Dam.         | Height above Foundation. | Width at Top. | Thickness at Bottom. | Length. | Area of Reservoir. | Capacity of Reservoir. |
|--------------|--------------------------|---------------|----------------------|---------|--------------------|------------------------|
|              | Feet.                    | Feet.         | Feet.                | Feet.   | Acres.             | Gallons.               |
| Cataract ... | 192                      | 16½           | 150                  | 811     | 2,104              | 20,743,200,000         |
| Prospect ... | 85½                      | 30            | 523                  | 7,300   | 1,266½             | 11,029,200,000*        |

\* Of which 5,527,000,000 gallons are available by gravitation.

(b) *Aqueducts and Mains.* The water is drawn off from the Prospect reservoir by a canal, five miles in length, to the Pipe Head Basin, situated 16½ miles from Sydney. It is then conveyed for a further distance of five miles to Potts' Hill reservoir, which has a capacity of 100,000,000 gallons, covers twenty-four and a half acres, and is designed to tide the city over any interruption of supply from Prospect, and to prevent fluctuation of pressure. Thence the water passes through a screening tank, and proceeds towards the city in two 48-inch cast-iron mains. A fuller description of the system of reticulation adopted will be found in previous issues.

(c) *Storage Reservoirs.* In connection with the water supply there are in all thirty-five service reservoirs, with a total maximum capacity of 55,693,000 gallons.

(d) *Revenue, Expenditure, and Capital Cost of Sydney Waterworks.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan waterworks for 1901 and 1909-13.

## SYDNEY WATERWORKS.—REVENUE, EXPENDITURE, AND CAPITAL COST, 1901 and 1909-13.

| Year Ended 30th June. | Revenue. | Working Expenses. | Capital Cost exclusive of Items on which Interest is not charged. | Percentage of Working Expenses to Revenue. | Percentage of Revenue to Capital Cost. | Interest Payable on Capital Cost. | Net Profit after paying Working Expenses and Interest. |

(f) *Other Water Supply Systems under the Metropolitan Board.* In addition to the main metropolitan water supply system there are certain other systems within the County of Cumberland managed by the Metropolitan Board. (a) The Richmond waterworks are entirely unconnected with the Sydney supply. Water is supplied to the town by a small pumping station on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean. (b) The Wollongong waterworks are also unconnected with the Sydney supply. The source of supply is the Cordeaux River and the catchment area is 2400 acres in extent. The total capacity of the reservoir is 173,000,000 gallons and the total length of the main about nineteen miles, exclusive of the extension to Port Kembla and Unanderra. (c) The Manly waterworks are supplied by a special catchment area of about 1300 acres, and are also connected with the metropolitan system by a 10-inch main from Mosman. (d) The water-supply for the districts of Campbelltown, Camden and Narellan, and Liverpool is not drawn from the main Sydney supply through Potts' Hill, but is received by gravitation from the upper canal at Prospect. For further details of these water-supply systems see previous issues.

(ii.) *Metropolitan Sewerage System.* The system which is now under the control of the Metropolitan Board of Water Supply and Sewerage will be found fully described in previous issues. (See Year Book No. 5, p. 986).

(a) *Revenue, Expenditure, and Capital Cost of Sydney Sewerage Systems.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan sewerage systems for 1901 and 1909-13:—

(iii.) *The Hunter District Water Supply and Sewerage Board.* The waterworks of the Lower Hunter were constructed by the Government under the provisions of the Country Towns Water Supply and Sewerage Act of 1880. In 1892 a special Act was passed establishing an independent Board to control the water-supply works. Fuller reference is made to the constitution of this Board and to the municipalities and incorporated areas under its jurisdiction in previous issues of the Year Book. (See Year Book No. 5, p. 988.)

(a) *Description of Waterworks.* The water supply is pumped from the Hunter River about a mile and a half up stream from West Maitland into a settling-tank of 1,390,500 gallons capacity, thence through filter beds into a clear water tank holding 589,500 gallons. It is then pumped from the clear water tank into two summit reservoirs, one of which supplies East and West Maitland, Morpeth, and Maitland, while the other supplies the other districts under the control of the Board. There is also a storage reservoir of 172,408,100 gallons capacity, which is resorted to when the river water is too turbid. In these districts there are nine service reservoirs, having a total capacity of nearly 4,000,000 gallons supplied by gravitation. On the hill at Newcastle there is also a high-level iron tank with a capacity of 20,000 gallons, which is supplied by a small pumping engine on the roof of the Newcastle reservoir. The total length of water mains is 354 miles.

(b) *Water Supply, Capital Cost, Revenue, and Expenditure.* By the Act of 1892 referred to above and an Amending Act of 1894 the capital debt of the Board was to be liquidated by annual instalments distributed over 100 years with interest at 3½ per cent. By a further amending Act of 1897 the repayment of expenditure on permanent works was abrogated, and the annual instalments were to be paid in liquidation of the cost of renewable works to be fixed by the Government from year to year. The capital debt of the Board to the Government at 30th June, 1913, was in respect of water supply £512,862, and £292,390 in respect of sewerage. In the subjoined table particulars are given as to the revenue and expenditure, and also as to the number of houses and population supplied in 1901 and 1909 to 1913:—

**PARTICULARS OF THE HUNTER DISTRICT WATER SUPPLY, 1901 and 1909 to 1913.**

| 1913 ... ..           | 53,673   | 49,043                                 | 18,405           | 92,025                       | 2,366          | 863,692       |

\* Inclusive of an instalment of £10,574 to the sinking fund for reconstruction of renewable works.

The average daily consumption of water for all purposes per inhabitant was 25.71 gallons during the year 1913, as against 22.77 gallons during the previous year.

(c) *Sewerage Works.*—Considerable progress has been made by the Department of Public Works with the construction of the sewerage works for Newcastle and suburbs. The scheme is designed on the separate system, and will deal with the sewage partly by gravitation and partly by pumping. Up to the 30th June, 1913, about 51 miles of sewers, connecting with 3457 separate properties, were under the control of the Board. For the financial year 1912-13 the revenue was £12,472 and the expenditure £16,960, the latter amount including a £2231 instalment to the Sinking Fund for the reconstruction of renewable works.

(iv.) *Water Supply and Sewerage in Country Towns.* With the object of assisting municipalities to construct systems of water supply and sewerage, the Country Towns Water Supply and Sewerage Act of 1880 was passed, but has since been amended by the

Acts of 1887, 1894 and 1905. The principal provisions of these Acts are more fully dealt with in previous issues of this book. (See Year Book No. 5, p. 989.)

(a) *Waterworks.* Up to the 30th June, 1913, forty-nine country municipalities had availed themselves of the privileges of the Acts as regards waterworks, all of which at that date had been completed and handed over by the Government. The total amount expended on these works was £900,454, and the total of the sums payable annually for a period of 100 years was £34,351, including interest at the rate of  $3\frac{1}{2}$  per cent., the first repayments having become due at various dates, starting from the end of the year 1893. In the calculation of these repayments the interest on the expenditure has been added, and any payments by the councils, as well as sums remitted under the authority of the Act, have been deducted. Other schemes of water supply and extensions of existing works are in course of construction. A number of other municipalities have constructed works out of their own resources.

(b) *Sewerage Works.* Only eleven municipal councils have taken advantage of the Act providing for the construction of sewerage works in country towns. On the 30th June, 1913, the capital debt of these systems was £169,393, the amount payable annually to the Government being £6479. Other sewerage systems, as well as extensions to existing systems, are in course of construction.

2. *Victoria.*—(i.) *The Melbourne and Metropolitan Board of Works.* This Board was established by an Act of 1890, and entered upon its duties in March, 1891. The Board consists of forty members, one of whom is a chairman elected every four years by the other members. Nine members are elected by the Melbourne City Council, four by the South Melbourne Council, three by the Prahran, two each by the Fitzroy, Richmond, St. Kilda, and Collingwood, and one each by the other suburban municipal councils returning a representative. The district over which the Board exercises control consists of fifteen cities, five towns, two shires, and parts of three others, or twenty-five municipalities in all, comprising a total area of 109,009 acres, and containing an estimated population on the 31st December, 1913, of 639,700 (including those supplied with water outside the Board's area). The waterworks for the supply of Melbourne and suburbs were originally carried out by the Government, which had for that purpose contracted loans amounting to £2,389,934; these works were vested in the Board in 1891. The primary object of the creation of the Board was not, however, to take over these works, but was to supply the long called for and pressing want of a sewerage system for the metropolis. To carry out its work the Board is authorised to borrow £9,750,000, exclusive of the loans contracted by the Government for the purpose of waterworks and taken over by the Board. The liability on Government loans on the 30th June, 1913, was £1,559,786, and for loans raised by the Board was £9,603,500. The Board is still empowered to borrow £976,648 before reaching the limit of its borrowing powers.

(a) *Total Cost of Water Supply and Sewerage.* The subjoined table shews the total cost of construction and maintenance of water supply and sewerage from 1853 to 1913.

**MELBOURNE AND METROPOLITAN BOARD OF WORKS.—TOTAL COST OF CONSTRUCTION AND MAINTENANCE OF WATER SUPPLY AND SEWERAGE, 1853 to 1913.**

\* Excess of stock distribution (£7020) over purchases (£2727).

(ii.) *Melbourne Metropolitan Water Supply.*—In December, 1857, the construction of the Yan Yean Reservoir system was completed. A description of the conditions that prevailed in Melbourne prior to that date is given in previous issues of the Year Book.

(a) *Development of System.* The following statement shews the development which has taken place in the water supply system of Melbourne during the fifty-six years since its inception :—

**MELBOURNE WATER SUPPLY SYSTEM, 1857 to 1913.**

| Year.    | Population* Served. | Capital Cost. | Charge per 1000 Gallons. | Rate in £ | Reticulation, Mains, &c., Mileage. | Supply in Gallons, Average daily. |
|----------|---------------------|---------------|--------------------------|-----------|------------------------------------|-----------------------------------|
|          |                     | £             |                          |           |                                    |                                   |
| 1857 ... | 95,442              | 748,974       | 10/- and 6/-             | 1/-       | 104                                | 3,250,000                         |
| 1913 ... | 639,700             | 4,463,657     | 1/-                      | 7d.       | 1,509                              | 39,380,167                        |

\* On the 31st December.

(b) *Description of Water Supply Systems.* The water supply of Melbourne consists of two main systems—the Yan Yean and the Maroondah, together with the high level system.

A full description of these systems has been given in previous issues of this book (see No. 6, p. 983).

The three reservoirs at Preston, which are the main distributors of the central city supply, contain 13,500,000, 24,500,000, and 26,300,000 gallons respectively, the third and last being built during 1912-13.

The work is approaching completion of diverting the waters of the O'Shanassy River, a tributary of the Yarra, by an open aqueduct and pipe line of an aggregate length of about 49½ miles, delivering water to the eastern portion of the metropolis by way of Mitcham and Surrey Hills. The total capacity of the scheme is to be 20,000,000 gallons per day, but capable of enlargement to 60,000,000 gallons. The scheme is estimated to cost £450,000. The watershed of the O'Shanassy River, containing 33,000 acres, has been excised from the permanent forests area, and a Crown grant was issued to the Board on the 28th January, 1910.

(c) *Catchment Areas, Reservoirs, and Aqueducts.* (i.) *Drainage Areas.* The whole of the catchment areas are absolutely free from population, cultivation, or stock grazing, and are under the complete control of the Metropolitan Board of Works. The present drainage areas from which the water is delivered are as follows:—

**MELBOURNE WATER SUPPLY.—CATCHMENT AREA IN ACRES, 1913.**

| Silver and Wallaby Creeks. | Plenty River and Jack's Ck. | Yan Yean Reservoir Catchment. | Maroondah Catchment. | O'Shanassy Catchment. | Total.  |
|----------------------------|-----------------------------|-------------------------------|----------------------|-----------------------|---------|
| 12,000                     | 12,000                      | 5,000                         | 40,000               | 33,000                | 102,000 |

All the water is delivered by gravitation, no pumping being required in any portion of the area supplied.

(ii.) *Storage Reservoirs.* In connection with distribution there are twelve service reservoirs having a total capacity of 120,300,000 gallons. The total daily quantity of water which can be sent into Melbourne is as follows:—

| System          | Yan Yean.  | Maroondah. | High Level Main. | Total Supply. |
|-----------------|------------|------------|------------------|---------------|
| Gallons per day | 33,000,000 | 28,000,000 | 9,000,000        | 70,000,000    |

(d) *Quantity of Water, Number of Houses, and Population Supplied.* The following table gives various particulars for the years 1901 and 1909-13, shewing the increase in the supply of water in Melbourne and suburbs:—

**MELBOURNE WATERWORKS.—NUMBER OF HOUSES, POPULATION, AND WATER SUPPLIED, 1901 and 1909-13.**

| Year Ended 30th June. | Number of Houses Supplied. | Estimated Population Supplied. | Average Daily Supply. | Total Supply for the Year ended 30th June. | Average Daily Supply. |                                   | Rate Levied. | Assessments of Tenements Served by Metropolitan Water Supply. |

\* Works commenced in 1853. † Revenue commenced in 1854. ‡ Returns for expenditure commenced in 1859. § First interest paid in 1856.

(iii.) *Melbourne Sewerage.*—As stated above, the chief object of the creation of the Melbourne and Metropolitan Board was to carry out an efficient system of sewerage. Old Melbourne used to be a city of cesspits, and it was not until the latter sixties that these were abolished, filled up, and the movable pan system gradually adopted throughout the whole metropolitan area, with night removal. The cost of removal in 1894 was about £90,000, equal to a capital expenditure of £1,750,000. This objectionable system has been displaced by the water carriage system throughout the greater portion of the metropolis, and in other parts the work of reticulation is now proceeding.

(a) *Description of Sewerage Systems.* The whole of the sewage of the metropolis is being gradually collected by means of two principal main sewers and a subsidiary main leading to the pumping station at Spotswood. A description of the scheme may be found in previous issues. (See Year Book No. 5, p. 1007.) On the 30th June, 1913, the sewerage system had been practically completed in the following districts:—Port Melbourne, South Melbourne, Melbourne (except very small portions of Flemington and Kensington), Richmond, Prahran, Collingwood, Fitzroy, St. Kilda, Essendon, and nearly the whole of Brighton, Malvern, and Williamstown. The greater part of Caulfield, Footscray, Kew, Brunswick, and Hawthorn had also been dealt with, together with the thickly populated portions of Camberwell, Northcote, Coburg, Preston, and Moorabbin, besides small portions of Nunawading and Heidelberg.

(b) *Metropolitan Sewage Farm.* The farm originally contained 8847 acres, situated on the western side of the Werribee River. The price paid for the land was £17 10s. per acre (including compensation for severance), which in its virgin unimproved state cost the Board in 1892, £159,573. This sum included the purchase of a strip of land 11½ miles long (168½ acres) on which the greater portion of the outfall sewer is constructed. Since 1911, 1370 acres have been purchased, making the total area of the farm 10,217 acres at 30th June, 1913, its total cost to that date being £489,740. About 31,770,274 gallons of sewage had to be disposed of every twenty-four hours during the year in irrigating the fields. It is spread over properly-prepared and sown blocks of land by a series of mains and lateral carriers. The blocks are laid down with grass and lucerne, on which sheep and cattle are depastured. During the financial year 1912-13, 32,395 sheep were bought, the profit from that source being £10,893. Cattle to the number of 2846 were purchased, the profit for the year on cattle being £4539.

(c) *House Connections.* The work of house connections with the sewerage system is carried out under a carefully prepared by-law. Under the Amending Act of 1897, after a property has been declared to be a sewered property, the owner has several options. (a) He may submit a plan of his house connections for approval, and on approval being given, may agree to carry out the work within one month. (b) He may submit a plan, for which, if approved of, he may ask for an estimate of the cost of carrying out. This the

Board is bound to supply, and then the owner may either carry out the work himself or ask the Board to carry out the work, which it must do for the estimated price, whether the work costs less or more. (c) On default of the owner the Board may carry out the work, and at the request of the owner accept payment by forty quarterly instalments, bearing interest on such portion as from time to time remains unpaid at the rate of 5 per cent.

(a) *Number of Houses Connected, Capital Cost, Revenue and Expenditure.* The following table gives particulars as to the number of houses connected to the sewerage system, the total capital cost, and the receipts and disbursements during 1901 and 1908-13:—

**MELBOURNE SEWERAGE WORKS.—TENEMENTS CONNECTED, CAPITAL COST, REVENUE, MAINTENANCE AND WORKING EXPENSES, 1901-2 and 1908-13.**

(iv.) *Water Supply in Country Towns and Districts.* By the Water Act 1905, which came into operation on the 1st May, 1906, the control and management of all Irrigation Trusts, with one exception, and of a number of waterworks and water supply districts were centralised, and their works and property vested in the State Rivers and Water Supply Commission. The powers and duties of this Commission were extended by the Water Act 1909, the whole of the Water Supply Department being now merged in the Commission. Further information with regard to this Commission and to the works and districts under its control are given in the section in this book dealing with Water Conservation and Irrigation. There are, however, in different parts of Victoria a number of other waterworks which are concerned chiefly with domestic supply, and which are controlled by local authorities, i.e., by Waterworks Trusts or by municipal corporations. These works are constructed out of moneys either granted or lent by the State Government. The following table gives particulars as to the waterworks under the control of Trusts and municipal corporations for the years 1901 and 1909-13:—

**VICTORIA.—COUNTRY WATERWORKS UNDER TRUSTS AND MUNICIPAL CORPORATIONS, 1901 and 1909-13.**

| Year.   | Waterworks Trusts. |               |                       |                       |           |              | Municipal Corporations.* |               |                       |                       |

\* Particulars as to the receipts and expenditure in respect of waterworks under the control of municipal corporations are not available. † Returns not available.

Under the provisions of the Local Government Act 1903, municipal councils are authorised to construct and maintain tanks, dams, and reservoirs, and must maintain existing works for the gratuitous supply of water. They are also empowered to accept the management and control of new waterworks within their respective localities, and may, with the consent of the Governor, construct or purchase new works within or without their locality. Councils are also authorised to enter into contracts for the supply of water for any period not exceeding ten years with the owner of any waterworks. Every municipality may levy a special water rate for water supplied, or for the purpose of constructing waterworks or paying the interest on any loan contracted by the council for such purpose, but the amount of the rate must not exceed in any year the sum of two shillings in the pound, provided that a minimum sum of ten shillings may be fixed by the council to be paid in respect of any property at which water is supplied.

(v.) *Geelong Waterworks Trust.* This trust was constituted under The Geelong Municipal Waterworks Act 1907, with borrowing power up to £300,000, afterwards increased by Act No. 2322, 1911, to £350,000. It was reconstituted under Geelong Waterworks and Sewerage Act 1910, with power to borrow an additional £250,000 for the purpose of installing a sewerage system for Geelong and suburbs. The available storage capacity of the reservoirs is 1468 million gallons, and the Trust is authorised to supply water to (a) City of Geelong; (b) the suburbs thereof, and all places within a radius of five miles of the Geelong Post Office; and (c) any place within ten miles on either side of the main pipe from Stoney Creek to Geelong. The sewerage scheme provides for a main outfall sewer 4 ft. 3 in. x 3 ft. 3 in. to the ocean at Black Rock—a distance of about nine miles. The scheme will embrace an area of 8081 acres, including the City of Geelong, Boroughs of Newton and Chilwell, and Geelong West, and the suburban areas situated in Corio and South Barwon Shires.

3. *Queensland.*—(i.) *The Metropolitan Water and Sewerage Board.* This Board was constituted by the Metropolitan Water and Sewerage Act 1909, which divested the then existing Water Board of its powers and duties and vested them in an extended form in the new Board. The Act further empowers the Board to carry out a sewerage and drainage system, and relieves the Local Authorities of their responsibilities in that matter. The district of the new Board comprises the cities of Brisbane and South Brisbane, the towns of Hamilton, Ithaca, Toowong, and Windsor, and the shires of Balmoral (except division 3), Coorparoo, Enoggera (except division 3), Sherwood (except division 1), Stephens, Taringa, Toombul, and a portion of Kedron.

The Board consists of nine members, viz., the president and eight elected colleagues.

(a) *Brisbane Water Supply.* The supply is derived from the upper reaches of the Brisbane River, and from two storage reservoirs, known respectively as the Enoggera and the Gold Creek reservoirs.

(1) *The Brisbane River Supply.* Of these the principal source of supply is the Brisbane River, about 75 per cent. of the water used being taken from it. The catchment area above the pumping station is about 4000 square miles. The Mount Crosby service reservoir, into which the water is pumped from the river, is built in cement concrete, and is 267 feet long, 100 feet wide, and 15 feet deep from high-water line, which is 455 feet above high-water mark at Brisbane. The capacity is about 2,500,000 gallons. The existing pumping plant is being considerably augmented, and new reservoirs and sedimentation basins are in course of construction.

(2) *The Enoggera Reservoir.* The Enoggera works are distant from Brisbane about eight miles by road. The catchment area is nearly thirteen square miles in extent, and the reservoir, which is formed by an earthen dam,

holds 1,000,000,000 gallons, of which 600,000,000 are available by gravitation. The greatest length of the reservoir is 2600 yards, and its greatest breadth 700 yards. The supply from Enoggera is filtered through an intermittent sand filtration plant, comprising half an acre of sand beds, and a pure water reservoir with a capacity of 750,000 gallons.

(3) *The Gold Creek Reservoir.* This reservoir is situated in the upper waters of Gold Creek, a branch of Moggil Creek, distant from Brisbane by road about thirteen miles. The supply is drawn from a catchment area adjoining that of Enoggera, and comprising an area of nearly four square miles. The total capacity is about 406,000,000 gallons, of which 400,000,000 gallons are available.

(4) *Service Reservoirs.* Certain portions of the metropolitan area are supplied with water from service reservoirs, which are connected with one or other of the main reservoirs alluded to above. These service reservoirs are constructed at Highgate Hill, Wickham Terrace, and Bartley's Hill, and have a total capacity of over 4,000,000 gallons. A fuller description of the Brisbane water supply scheme may be found in previous issues.

(b) *Brisbane Waterworks: Cost, Revenue, Expenditure, and Interest.* The subjoined table gives particulars as to the cost, the revenue and expenditure, and the amount of interest and loan redemption during 1901 and each of the years 1909 to 1913:—

**BRISBANE WATERWORKS.—COST, REVENUE, EXPENDITURE, INTEREST, AND REDEMPTION OF LOANS, 1901 and 1909-13.**

| Year.    | Capital Cost. | Revenue from Rates and Sales of Water. | Working Expenses. | New Work Construction. | Interest and Redemption of Loans. |
|----------|---------------|--|-------------------|------------------------|-----------------------------------|
|          | £             | £                                      | £                 | £                      | £                                 |
| 1901 ... | 694,973       | 60,120                                 | 17,462            | 7,535                  | 42,426                            |
| 1909 ... | 825,812       | 69,736                                 | 25,246            | 14,756                 | 26,716                            |

| 1910 ... | 317                           | 22,830                         | 114,150                        | 1,776,734          | 4,867,766             | 42½  |
| 1911 ... | 333½                          | 24,153                         | 120,765                        | 1,870,767          | 5,125,390             | 42.44  |
| 1912 ... | 347                           | 27,678                         | 129,575                        | 2,020,404          | 5,520,231             | 42.60  |
| 1913 ... | 370½                          | 28,301                         | 139,925                        | 2,099,590          | 5,752,302             | 41.05  |

The total length of the trunk mains is 69½ miles.

A scheme of sewerage has been devised for Brisbane and its suburbs. It is intended to construct works for the provision of a population of 275,000, and tenders have been invited for the construction of the first three sections of the main sewer.

(ii.) *Country Towns Water Supply.*—In addition to the city of Brisbane there were at the end of the year 1912 twenty-eight towns in Queensland provided with water supply systems, constructed by municipalities chiefly from Government loans. The sub-joined statement gives particulars of all the water supply systems—exclusive of Brisbane—for the year 1912 :—

#### QUEENSLAND.—PARTICULARS OF COUNTRY WATER SUPPLY SYSTEMS, 1912.

\* Including £42,534 from Government loans.

4. *South Australia.*—(i.) *Adelaide Water Supply System.* The water supply system of Adelaide is under the control of the Public Works Department. The supply is obtained partly from the catchment areas of the rivers Onkaparinga, Torrens, and Sixth Creek, and partly from springs and pumping stations. There are three storage reservoirs, situated at Happy Valley, Hope Valley, and Thorndon Park, having an aggregate capacity of 3,895,000,000 gallons, while the tanks used in connection with the springs and pumping stations have a further capacity of 4,824,000 gallons. The total capital cost up to the 30th June, 1913, was £1,883,450, the total revenue being £2,712,750 and the area served approximately 106,000 acres.

The following table gives various particulars relating to the water supply of Adelaide for the years 1908 to 1913 inclusive:—

#### ADELAIDE WATER SUPPLY.—LENGTH OF MAINS, REVENUE, EXPENDITURE, AND CONSUMPTION OF WATER, 1908 to 1913.

| Year Ended 30th June. | Length of Mains. | Gross Revenue. | Working Expenses. | Net Revenue. | Percentage of Net Revenue on Capital Cost. | Total Consumption of Water.* |
|-----------------------|------------------|----------------|-------------------|--------------|--|------------------------------|
|                       | Miles.           | £              | £                 | £            | %  | Million of Gals.             |
| 1908 ...              | 673              | 76,707         | 21,233            | 55,474       | 3.26                                       | 4,000                        |
| 1909 ...              | 684              | 81,412         | 20,762            | 60,650       | 3.53                                       | 4,000                        |
| 1910 ...              | 704              | 82,290         | 22,709            | 59,581       | 3.31                                       | 4,000                        |
| 1911 ...              | 732              | 89,902         | 28,032            | 61,870       | 3.40                                       | 4,000                        |
| 1912 ...              | 763½             | 94,280         | 26,384            | 67,896       | 3.68                                       | 4,600                        |
| 1913 ...              | 802½             | 105,590        | 27,982            | 77,608       | 4.12                                       | 4,700                        |

\* In the Adelaide Water District there are no governing meters. The quantities shewn above are as recorded by gaugings taken at the reservoirs, and include evaporation and absorption.

(ii.) *Adelaide Sewerage System.* In connection with the sewerage system of Adelaide, which is also under the control of the Public Works Department, about 322 miles of sewers had been laid in the city and suburbs up to the 30th June, 1913. The sewage is disposed of on a farm and filter-beds, the latter being used only during the winter months. A scheme of sewerage extension is now nearing completion, which includes a pumping station, to deliver the sewage to the existing sewage farm.

The following table gives particulars relating to the Adelaide sewerage system for the years 1908 to 1913 inclusive:—

**ADELAIDE SEWERAGE SYSTEM.—REVENUE AND EXPENDITURE, 1908 to 1913.**

| Year Ended the 30th June. | Revenue.            |                                     |        | Expenditure. |                                |        | Net Revenue. |                             |
|---------------------------|---------------------|-------------------------------------|--------|--------------|--------------------------------|--------|--------------|-----------------------------|
|                           | Rates and Interest. | Sewage Farm. Sales of Produce, etc. | Total. | Maintenance. | Sewage Farm. Working Expenses. | Total. | Total.       | Percentage on Capital Cost. |
|                           | £                   | £                                   | £      | £            | £                              | £      | £            | %                           |
| 1908 ...                  | 32,678              | 7,436                               | 40,114 | 6,294        | 5,081                          | 11,375 | 28,739       | 4.49                        |
| 1909 ...                  | 34,701              | 8,284                               | 42,985 | 7,161        | 5,917                          | 13,078 | 29,907       | 4.56                        |
| 1910 ...                  | 36,322              | 7,213                               | 43,535 | 7,184        | 6,088                          | 13,272 | 30,263       | 4.41                        |
| 1911 ...                  | 37,938              | 7,189                               | 45,127 | 8,462        | 7,681                          | 16,143 | 28,984       | 4.26                        |
| 1912 ...                  | 41,449              | 6,934                               | 48,383 | 9,376        | 5,039                          | 14,415 | 33,968       | 4.88                        |
| 1913 ...                  | 45,373              | 8,392                               | 53,765 | 9,803        | 6,392                          | 16,195 | 37,570       | 5.01                        |

The seaside town of Glenelg is served by a separate sewerage disposal works, including a pumping station, septic tank, lucerne plots, and filter beds. The net revenue for the year ended 30th June, 1913, was £1475, being 3.61 per cent. on the capital cost. Up to the same date 13½ miles of sewers had been laid.

(iii.) *Water Supply in Country Towns.* In South Australia there is a number of country waterworks under the control of the Public Works Department. There are three large reservoirs at Barossa, Beetaloo, and Bundaleer, which supply fifty-three townships with water for domestic and stock purposes. The principal towns thus supplied are Gawler, Wallaroo, Moonta, Kadina, Port Pirie, Port Wakefield, and Balaklava. The following table shews the capacity of these reservoirs, together with particulars as to the townships supplied and the country lands reticulated:—

**PRINCIPAL COUNTRY WATERWORKS, SOUTH AUSTRALIA, 1913.**

| Reservoirs.   | Townships Supplied. |               |                | Country Lands Reticulated. |                | Capacity in Million Gallons. |                     |
|---------------|---------------------|---------------|----------------|----------------------------|----------------|------------------------------|---------------------|
|               | Number.             | Square Miles. | Miles of Main. | Square Miles.              | Miles of Main. | Head-works.                  | Service Reservoirs. |
| Barossa ...   | 23                  | 40            | 64             | 1,001                      | 505            | 993½                         | 10                  |
| Beetaloo ...  | 19                  | 43            | 138            | 1,648                      | 790            | 800                          | 68                  |
| Bundaleer ... | 13                  | 8             | 31             | 1,040                      | 453            | 1,319                        | 16                  |

Fifteen township districts are supplied from smaller local reservoirs, the most important town served being Port Augusta. New water supply schemes are in course of construction for the supply of townships and farming lands on Eyre Peninsula, near Cowell, Arno Bay, and Cleve.

**5. Western Australia.**—(i.) *Water Supply, Sewerage and Drainage Department.*—Prior to 1912, water supply, sewerage and drainage, in Western Australia, although under Governmental control, were nevertheless under the management of several distinct departments. In that year, however, the Government decided that this divided control should

be concentrated in one department with the Minister of Works as administrator, and on the 1st August, 1912, a new department with the above title assumed the management of the undermentioned water supplies:—(a) The Metropolitan Water Supply Sewerage and Drainage Department. (b) The Goldfields Water Supply Administration. (c) The branch of the Mines Department dealing with the Mines Water Supply, boring and well-sinking in mining districts, the North-west, etc. (d) The branch of the Public Works Department dealing with water supply, sewerage, drainage, well-sinking, boring, etc., in agricultural districts, the North-west, etc.

The Acts of Parliament administered by the new department are:—“The Metropolitan Water Supply, Sewerage and Drainage Act 1909;” “The Goldfields Water Supply Act 1902” and amendment; “The Water Boards Act 1904;” “The Lands Drainage Act 1900” and amendment, and “The Water Supply Act 1893.” The number of water areas, apart from the metropolitan and Mundaring undertakings, existing when the Department took over this branch of work was 12, of which 11 were controlled by Boards and one by the Minister. Since that date four new areas have been declared, while two Boards have been dissolved. Of the 16 water areas, nine are now controlled by local Boards and seven by the Department.

(ii.) *The Perth Metropolitan Water Supply, Sewerage, and Drainage.* The Perth Metropolitan Water Supply Works were first opened by a private company in October, 1890. Under the provisions of the Metropolitan Waterworks Act 1896, however, the works were purchased by the Government at a cost of £220,000, and were placed under the control of a Board, the functions of which have been exercised since the year 1904 by the Minister for Works. By the Metropolitan Water Supply, Sewerage, and Drainage Act 1909, all water and sewerage works formerly vested in the Metropolitan Board were transferred to a Minister of Water Supply, Sewerage, and Drainage. In August 1912 the administration was transferred to the new Water Supply Department (see preceding paragraph).

(a) *Water Supply.* The supply of water is derived from four sources—(i.) the Victoria reservoir, (ii.) Bickley Brook reservoir, (iii.) the Mundaring reservoir, and (iv.) from six artesian bores.

(a) *The Victoria Reservoir.* This is the main source of supply. The reservoir has a capacity of 220,000,000 gallons, and has a catchment area of 10,000 acres on the Darling Ranges. During the year 1912-13, 327 million gallons were obtained from this reservoir.

(b) *Bickley Brook Reservoir.* This is supplementary to the Victoria reservoir, being connected to it by an eight-inch pipe. It has a catchment of 1780 acres, and a supply of 136 million gallons was drawn from this source during the year ending 30th June, 1913.

(c) *The Mundaring Reservoir.* This reservoir is used as an emergency supply. It has a capacity of 4,650,000,000 gallons, but is only connected by an eight-inch main. This reservoir has a catchment area of 569 square miles, and was constructed in connection with the goldfields water supply. Nearly 6 million gallons were drawn from this source during the year for metropolitan use, the goldfields consumption for the same period being 1,205 million gallons.

(d) *Artesian Bores.* There are in all six artesian bores, the flow from which augments the main supply from the Victoria reservoir. The total bore water pumped during 1912-13 was 484,796,000 gallons.

(b) *Financial Operations of Water Supply Department.* The following table gives particulars of the financial operations of the Metropolitan Water Supply Branch for each year ending the 30th June from 1909 to 1913 inclusive:—

**PERTH METROPOLITAN WATER SUPPLY BRANCH.—PARTICULARS OF FINANCIAL  
OPERATIONS, 1909 to 1913.**

| Year ended the 30th June. | Capital Cost of Works. | Depreciation. | Net Capital Cost. | Gross Revenue. | Cost of Maintenance and Management. | Interest Earned on Gross Capital Cost. | Ratio of Working Expenses to Revenue. |
|---------------------------|------------------------|---------------|-------------------|----------------|-------------------------------------|--|---------------------------------------|

(d) *Sewerage and Drainage in Perth and Fremantle.* The work of providing a sewerage system for Perth and Fremantle was commenced in 1906, and has proceeded without interruption up to the present time. House connections in Perth are making rapid progress, there being upwards of 2800 premises connected to the sewers, while in Fremantle 309 houses had been connected up to 30th June, 1913. The net financial

result of operations of the Metropolitan Water Supply, Sewerage and Drainage Department for 1912-13 is a deficit of £4438, as against a surplus of £17,964 for the preceding year, the difference being accounted for by the fact that in 1912-13, capital charges on the sewerage account were for the first time charges against revenue. A description of the method of sewage disposal adopted may be found in previous issues. (See Year Book No. 5, p. 1031.)

(iii.) *The Goldfields Water Supply Branch.*—This scheme by which the Government of Western Australia undertook to provide a permanent supply of water for the population of the eastern goldfields of that State has already been described in previous issues of the Year Book (see No. 5, page 582). The main source of supply is the Helena River in the Darling Ranges, whence by a system of reservoirs, the water is conveyed to Kalgoorlie and the surrounding district. Up to the 30th June, 1912, the total cost of construction was £3,373,168. The total consumption for the financial year 1912-13 was 1,204,757,000 gallons, an increase on the previous year of 69,957,000 gallons. The gross revenue for the year was £254,920, and the working expenses £89,388, leaving a surplus available towards interest and sinking fund of £165,532. The outlay for interest and sinking fund charges in respect of supplementary capital borrowed on debentures absorbed £28,671, leaving £136,861 payable to the State Treasury. During the financial year the State Treasury paid £168,813 interest and sinking fund on State loans in respect of these works, leaving a net deficiency of £31,952.

(iv.) *Mines Water Supply Branch.*—On the 1st of August, 1912, the administration of this branch was transferred to the new Water Supply, Sewerage and Drainage Department. While the statistics of this branch of the Department do not properly belong to the section dealing with "Local Government," nevertheless, as the functions exercised by the Department are similar to those delegated to local authorities in most of the other States of the Commonwealth, it is considered advisable to include them in the section under review.

At the present time the water stations under the control of the engineer number about 1400, and are spread over an area of nearly 500,000 square miles, extending from the Phillips River in the south to the Kimberley district in the far north. The principal works carried out by the branch are as follows:—(a) Domestic supplies for mining towns and the supply of water for battery and general mining purposes. (b) Opening up the very remote portions of the State by means of tracks, of which there are nearly 4000 miles. (c) The sinking of wells and bore-wells, also testing the country by means of boring to locate water, and thus enabling the mineral resources of the State to be systematically prospected. (d) Diamond drilling has also been carried out for the purpose of testing the country for minerals at depths unattainable with the ordinary boring plants. (e) Nearly 2000 miles of stock routes have been opened up, and wells have been sunk at easy stages, capable of watering mobs of 400 head of cattle. In addition to these works the Wiluna-East Kimberley route (890 miles) has been constructed. Tanks, dams, and reservoirs have been made on the goldfields for the conservation of surface water, their total storage capacity being 200,000,000 gallons, and their cost over £400,000.

Boring to locate water for domestic, stock, battery and other purposes has been carried out, the total depth being nearly 120,000 feet, and where good water has been found, a bore has been equipped with casing and pump, or a well sunk, according to requirements. The water shafts, of which there are about 300, are equipped according to the supply and demand, in some cases with only windlass and bucket, in others with a pump, storage tank, etc., while some which supply towns and batteries are equipped with powerful pumps and engines.

A very important adjunct of the Branch is the camel farm established at Coolgardie, where the breeding of camels is undertaken, the number at present being about 350. These camels are used by parties from the Water Supply Branch in the arid regions of

the interior, where water is scarce and the stages are long, and occasionally they are used by the other Government Departments engaged on such works as the Rabbit-Proof Fence and Transcontinental Railway Survey.

(v.) *Water Supplies in Agricultural Areas.*—When, in 1910, the Government decided to open up the unexplored agricultural districts, it was recognised that, to ensure the success of the undertaking, water supplies and access thereto were necessary. At first it was decided to rely wholly on conservation by dams. The system of zonation was inaugurated, that is, dams were constructed at a distance of about eight miles apart. At the end of 1911, however, it was decided to further exploit the country by boring for well water in conjunction with further dam construction, and up to the close of 1913, 256 tanks have been constructed and 225 wells have been sunk. The former have a total holding capacity of 86,000,000 gallons, and the water conserved approximates 40,000,000 gallons. The capital expenditure on this branch of water supply for the year ending 30th June, 1913, was £74,300.

6. *Tasmania.*—(i.) *Hobart Water Supply.*—The original water supply of Hobart was obtained from a stream known as the Hobart Rivulet, flowing from Mount Wellington, the works being carried out in 1831 by the Imperial Government. These works consisted of an aqueduct and a line of cast-iron pipes, the water being distributed to several points known as “wells.” By an Act of the State Parliament passed in 1860 the works were transferred to the municipality. Under this Act certain additional streams flowing from Mount Wellington were acquired as sources of supply, and a storage reservoir containing 45,000,000 gallons was constructed. The catchment area on Mount Wellington at present comprises an area of 4200 acres, the sources of supply having been extended at various times as far as the North West Bay River, fifteen miles from Hobart.

(a) *Storage Reservoirs.* There are two storage reservoirs about 2½ miles from the city. One contains 68,000,000 gallons and is 502 feet above sea-level, while the other contains 45,000,000 gallons and is 447 feet above sea-level. The whole of the supply is by gravitation. The water is brought from the various streams by means of stone aqueducts and cast-iron pipes to the reservoirs, and thence by four 10-inch cast-iron mains, of which three lead to the distributing reservoirs and one direct to the shipping and southern portion of the city.

(b) *Capital Cost, Tenements Connected, Length of Mains, Revenue and Expenditure.* The total capital cost to the end of 1913 was £235,450, but a considerable amount of reticulation work has been done out of revenue and not charged to capital account. The outstanding loans at the end of 1913 amounted to £188,175. At the same date the number of tenements supplied in the city and suburbs was 8200, the population 39,107, and the length of reticulation mains 86½ miles. The revenue and expenditure for the last six years were as follows:—

#### HOBART WATERWORKS.—REVENUE AND EXPENDITURE, 1908 to 1913.

| Particulars.       | 1908.  | 1909.  | 1910.  | 1911.  | 1912.  | 1913.  |
|--------------------|--------|--------|--------|--------|--------|--------|
|                    | £      | £      | £      | £      | £      | £      |
| Revenue ... ..     | 19,719 | 20,091 | 20,643 | 31,207 | 23,858 | 21,982 |
| Expenditure ... .. | 22,901 | 23,729 | 22,238 | 20,381 | 20,584 | 21,336 |

(c) *Proposed Extensions.* Parliamentary sanction to borrow £93,000 has been obtained for the purpose of improving the water supply of the city and suburbs of Hobart; £75,000 of this amount is to be spent on a new storage reservoir, and a contract for the construction of the dam for £56,500 has been let, the balance being retained for expenditure on other works connected with the scheme.

(ii.) *Hobart Sewerage System*.—A scheme for the construction of a sewerage system in Hobart was adopted in 1903. The sewage is discharged into the estuary of the River Derwent. Up to the end of the year 1913 about 70½ miles of sewers had been laid at a cost of about £188,235, and 6751 tenements (out of a total of 6845) had been connected. The revenue for the year was £12,662. The scheme, which is intended to sewer over 2000 acres so as to serve an estimated population of about 30,000 people, is almost completed. The suburb of Queenborough has recently become incorporated with the city, and arrangements are now being made to extend the system to this district.

#### § 4. Harbour Trusts.

1. *Introduction*.—In the chief ports and harbours of the Commonwealth, administrative bodies have been created, in whom is vested the control and management of the port with respect to dredging, wharf and harbour accommodation, pilotage, harbour dues, etc.

Of these Trusts or Boards some are purely departmental, some are nominated by Government, while others are comprised of members appointed by the municipal and other associations connected with the port. In the latter case, the Government is usually represented on the Board by one or more nominated members. The Boards and Trusts mentioned hereunder are the only ones for which information is at present available.

2. *Sydney Harbour Trust*.—The establishment of this Trust was the direct outcome of the outbreak of bubonic plague in the port of Sydney in the early part of the year 1900. It was proved that this disease was due to the introduction of plague-stricken rats in vessels arriving from ports in which the disease had made its appearance. As a consequence the whole of the foreshores of the harbour, together with certain adjoining wharves, stores, dwelling houses, and other properties, were vested in a body of trustees. The Trust was established by an Act which came into force on the 11th February, 1901. The powers and duties of the Trust have been dealt with in previous issues of this book, together with some of the more important improvements carried out by the Commissioners. (See Year Book No. 5, p. 990.)

(i.) *Revenue, Expenditure, and Capital Cost*. The subjoined table gives particulars of the revenue and expenditure of the Trust, and also shews the total capital debt for properties, etc., vested in the Commissioners, the amount of interest payable on the debt, and the balance of revenue after deducting expenditure, interest, and the amount of the Commissioners' salaries :—

#### SYDNEY HARBOUR TRUST.—REVENUE, EXPENDITURE, CAPITAL DEBT, INTEREST AND BALANCE, 1901 and 1909-13.

| Year ended the 30th June— | Revenue.                  |                                 |                     |         | Expenditure. | Total Capital Debt. | Interest.† | Balance. |

| 1912 ...                  | 234,731                   | 18,163                          | 158,755             | 411,649 | 143,170†     | 6,136,671           | 212,842    | \$56,898 |
| 1913 ...                  | 258,703                   | 18,417                          | 173,162             | 450,282 | 154,540†     | 6,535,853           | 221,049    | 74,693   |

\* For the period from 11th February to the 30th June, 1901. † The rate of interest charged each year is the average rate on the total capital debt of the State, which varies. ‡ Including expenditure for the renewal, replacement or reconstruction of wharves or buildings. § Including £761 repaid to previous revenue votes.

— Represents a loss.

The revenue for the year 1912-13 shows an increase of £38,635 on that for the previous year, and is the highest attained since the formation of the Trust. The working expenses for the year shewed an increase of £10,206 on the previous year, while the expenditure on renewals, etc., increased by £1164, making a total increased expenditure of £11,370.

(ii.) *Dredging and Towing.* The subjoined statement gives particulars of the dredging and towing done by the dredges and tug-boats owned by the Trust:—

**SYDNEY HARBOUR TRUST.—PARTICULARS OF DREDGING AND TOWING,  
1901 and 1909-13.**

| Year.    | Dredging.     |                    |                      | Towing Dredged Material. |                              |                              |

3. **The Melbourne Harbour Trust.**—This Trust was constituted under an Act passed in 1876, as a result of public agitation and demands extending over a period of thirty-four years, to the effect that the cost of landing goods should be reduced, and the delays in receiving goods should be abolished. Both demands arose from the fact that vessels of a draught greater than twelve feet had to discharge in the bay into lighters.

(i.) *Constitution of the Trust.* The Harbour Trust Act was originally drafted on the lines of similar institutions in Great Britain, such as the Thames Conservancy, the Mersey Harbour Board, and the Clyde Trust. Under the Act of 1876, as amended in 1883, the number of Commissioners was fixed at seventeen.

(ii.) *Works Undertaken by Trust in the River and in the Port.* In 1890 a Consolidating Act was passed, and the borrowing powers of the Trust were increased to £2,000,000, and subsequently by the Act of 1913 to £3,000,000. The river was widened from Queen's Bridge to the bay to about 300 feet, while the depth has been gradually increased until at the present time it is twenty-six feet at low water. Five and three-quarter miles of wharves carrying sheds which measure a total length of 14,515 feet, and cover an area of 705,780 square feet, have been constructed along the river and at the Victoria Dock, Melbourne.

(a) *The Coode Canal.* In 1886 the canal across the flats below Fishermen's Bend was completed at a cost of £96,000. The length of the canal is 2002 yards, the distance from Queen's Bridge to the river entrance being thereby reduced from seven miles to five and three-quarter miles, and the navigation being greatly facilitated. This channel, which is called the Coode Canal, has been widened 164 feet, which will make its total width 487 feet, and its width at low water 430 feet. At the present time there is a depth of 26 feet at low water for a width of 250 feet.

(b) *The Victoria Dock.* This dock, four miles up the river and opened in 1892, has an area of ninety-one acres and a depth of twenty-six feet at low water. The entrance to the dock is 160 feet wide. There are 8750 feet of wharfage, and the total cost, including wharves, sheds, and approaches thereto, was, to 31st December, 1913, £522,100. The sheds have a total length of 4868 feet, and cover an area of 265,600 square feet.

(iii.) *Works in the Bay.* Prior to 1889 all the mail steamers and vessels of heavy draught had to lie at anchor in the bay, and there discharge into lighters. One of the first works undertaken by the Commissioners was to make the railway piers at Williams-town available to these vessels. This work was completed at a cost of £256,160. In 1893 a channel over 8000 feet long and 600 feet wide was constructed, running in a southerly direction from Port Melbourne Railway Pier and having a navigable depth of thirty feet o.l.w. The cost of this work was £218,379.

(iv.) *Dredging.* The total quantity of material raised by the dredging and excavation done in the improvement of the river and bay amounts to nearly 46 million cubic yards.

During the ten years ending 31st December, 1913, the average cost of dredging per cubic yard was 2.86 pence and the cost of towing and depositing 6.29 pence, not allowing for depreciation of plant. The Trust has expended £225,458 in reclaiming land within its jurisdiction. The amount of material raised annually is now about 2,500,000 cubic yards.

(v.) *Financial Operations.* The revenue of the Trust is obtained from wharfages, and quayage rates, rents and license fees from lands and ferries, and other license fees. One-fifth\* of the revenue of the Trust is paid to the consolidated revenue of Victoria. The following table gives particulars of the revenue and expenditure of the Trust from 1908 to 1913 inclusive:—

#### MELBOURNE HARBOUR TRUST.—REVENUE AND EXPENDITURE, 1908 to 1913.

| Particulars.                     | 1908.   | 1909.   | 1910.   | 1911.   | 1912.   | 1913.   |

| Surplus ... ..                   | 37,490  | 39,806  | 86,662  | 67,252  | 88,698  | 163,392 |

\* Limited by Act 2449 to £60,000 per annum for five years from 1st January, 1913.

† Signifies a deficit.

4. **Fremantle Harbour Trust.**—Under the provisions of an Act passed in 1902, a Harbour Trust was constituted for the general administration of Fremantle harbour, and since January, 1903, the Trust has had full control of all the affairs of the harbour, and undertakes the duties of wharfingers, and the receiving, sorting, storing, delivering, and handling of all cargo, between vessels and the owners of the goods. The works, which were commenced in 1892, were designed with the object of forming a safe and commodious harbour within the mouth of the Swan River, so as to admit vessels at all states of the tide, and thus enable cargo to be loaded and discharged at the quays and goods-sheds on the river banks. Two ocean moles have been thrown out from the north and south heads, the former being 3450 feet and the latter 2040 feet long. A channel, 450 feet wide and 30 feet deep at low water, has been blasted and dredged through the rock which formerly crossed the estuary to the river, and wharves and goods-sheds have been constructed along the reclaimed foreshore on both sides of the harbour. The port possesses up-to-date-electrically operated grain storage and shipping appliances and the quays are well equipped with electric cranes and elevators, all wharves and stores being in direct communication with the State railway system. At the present time all the European mail boats, which make Fremantle the first and last port of call in Australia, are able to enter and leave the harbour in all weather and at all tides. For the year ended 30th June, 1913, the total revenue of the Trust was £99,768, and the expenditure £76,198. The gross amount paid to the Treasury for the year was £123,570, being interest £54,613, sinking fund £15,604, and surplus revenue account £39,000.

5. **Hobart Marine Board.**—The Hobart Marine Board was established in 1858, and consists of nine wardens, elected by the shipowners, importers and exporters of the port. To meet the requirements of the large steamers now visiting the Commonwealth, extensive harbour improvements were commenced in 1912. The ocean wharf and pier has now a length of 1150 feet, with a depth of water from 36 feet at the inner to 60 feet at the outer end.

The total capital debt on properties in connection with the Harbour Trust vested in the Board is £96,000. The interest paid thereon in 1913 amounted to £3865. The Marine Board also guarantees the interest on the cost of Tasman Island Lighthouse, £22,202. The revenue and expenditure of the Board for the years 1912 and 1913 were as follows :—

#### HOBART MARINE BOARD.—REVENUE AND EXPENDITURE.

| REVENUE. |          |                       |                   |        | EXPENDITURE. |                       |                   |        |
|----------|----------|-----------------------|-------------------|--------|--------------|-----------------------|-------------------|--------|
| Year.    | General. | Harbour Improvements. | Light-house Fund. | Total. | General.     | Harbour Improvements. | Light-house Fund. | Total. |
|          | £        | £                     | £                 | £      | £            | £                     | £                 | £      |
| 1912 ..  | 19,281   | 35,000                | 10,804            | 65,085 | 20,293       | 32,490                | 11,590            | 64,373 |
| 1913 ..  | 21,343   | *38,000               | 10,634            | 69,977 | *20,453      | 35,917                | 11,948            | 68,318 |

\* Including £8000 transferred from the General account to the Harbour Improvements account.

6. **Launceston Marine Board.**—The Board was formed in 1858 and consists of nine members, elected on the State Parliamentary franchise, with special residential conditions. The principal work of the Board is in connection with the straightening, deepening, and widening of the River Tamar, the distance from the wharves to the open sea being 40 miles.

Wharves to the length of 3758 feet have been constructed, the depth at some of them being 40 feet S.L.W. The total capital debt on 31st December, 1913, was £75,758, of which £27,250 was incurred on the Tamar Improvements Scheme. The revenue for 1913 was £19,469 and the expenditure £17,249.

**7. Geelong Harbour Trust.**—This Trust was appointed in 1905, and consists of three Commissioners appointed by the Government of Victoria. To the 31st December, 1912, the Trust had borrowed £240,000. The sinking fund at the same date stood at £6794. The revenue for the year 1912 was £34,695 and the expenditure £36,263. Under the Act appointing the Trust, one-fifth of a certain portion of the revenue is paid into the Consolidated Revenue of Victoria. In 1912, this amounted to £2985, making a total of £17,267 paid to the State since the inception of the Trust. At Sparrovale the Trust has established an experimental and model farm, confined almost entirely to dairy farming and the growing of lucerne. The revenue from this source for the year 1912 was £5191.

**8. Bundaberg Harbour Board.**—The principal port in Queensland for the shipment of sugar is Bundaberg, more than 55,000 tons of that commodity having been shipped from the port during 1913. The Harbour Board consists of nine members, representing the district shire councils and the shipowners and exporters, with one Government nominee.

The revenue for the year amounted to £8963 and the expenditure to £8067. The total Port Improvements Loans and Government Endowment amounted on the 31st December, 1913, to £31,147. During the year 1913, 256,850 tons were dredged at a cost of £3047.

**9. Bunbury (Western Australia) Harbour Board.**—The Bunbury Harbour Board was constituted in 1909, and consists of five members appointed by the Government.

The capital expenditure for the year ending 30th June, 1913, was £5776, making the total capital expenditure to that date £227,132. The revenue for the year was £27,231 and the expenditure £7941, the balance being paid into Consolidated Revenue. The timber trade is the principal industry of the port, the shipments of timber for the year ending 30th June, 1913, amounting to 217,068 loads.

**10. Burnie and Table Cape (Tasmania) Marine Board.**—While the existing works accommodate steamers of 4000 to 5000 tons, which visit the port regularly, they are insufficient for the rapidly increasing traffic in produce and ores from the north-west and west coast districts of Tasmania. A scheme is, therefore, being carried out by which the port will eventually be capable of taking any shipping trade in the Commonwealth. A breakwater is being constructed 1200 feet in length and with a depth of 40 feet at low water. It is intended later on to increase the length to 4000 feet and to enclose 300 acres of deep water space, of which 100 acres will have a depth of nearly 45 feet. The expenditure on that portion of the scheme at present under construction will be £150,000.

## § 5. Fire Brigades.\*

**1. New South Wales.**—Reference has been made in the section of this book dealing with the subject of *Private Finance* (see page 758) to the constitution of the Board of Fire Commissioners of New South Wales, which has now superseded the Metropolitan and all other Fire Brigade Boards in that State.

(i.) *Receipts and Disbursements of Board of Fire Commissioners of New South Wales.* The subjoined table shows the actual receipts and disbursements of the Board, for the years 1911, 1912 and 1913:—

---

\* See § 7, Fire Insurance, p 758.

**NEW SOUTH WALES BOARD OF FIRE COMMISSIONERS.—RECEIPTS AND DISBURSEMENTS FOR SYDNEY FIRE DISTRICT, 1911, 1912 and 1913.**

| Year.    | Receipts.        |                      |                                |             |                     |        | Disbursements. |
|----------|------------------|----------------------|--------------------------------|-------------|---------------------|--------|----------------|
|          | From Government. | From Municipalities. | From Fire Insurance Companies. | From Firms. | From other Sources. | Total. |                |
|          | £                | £                    | £                              | £           | £                   | £      | £              |
| 1911 ... | 21,643           | 21,643               | 21,198                         | 444         | 1,145               | 66,073 | 60,667         |
| 1912 ... | 20,100           | 20,100               | 19,896                         | 204         | 1,874               | 62,174 | 65,713         |
| 1913 ... | 25,586           | 25,586               | 25,404                         | 182         | 2,270               | 79,028 | 76,853         |

With reference to the preceding table, under the "Fire Brigades Act 1909," by which the New South Wales Board of Fire Commissioners was constituted and which came into operation on 1st January, 1910, insurance companies do not now, as formerly, return the amount of their risks, but give in lieu thereof the amount of premiums received, which forms the basis of their contribution towards the revenue of the Board. By this Act also, firms which effect insurances with companies not registered in New South Wales are likewise required to make contributions on account of the premiums paid to such companies, which is the first instance of this class of insurer being compelled to share the expense of local advantages, which had hitherto been available free of cost. A fuller description of the principal provisions of this Act will be found in previous issues of this book (see Year Book No. 5, page 990). The Sydney fire district includes the City of Sydney and suburbs, comprising a total area of 168 square miles.

**2. Victoria.**—Under the Fire Brigades Act of 1890 a metropolitan fire district and nine country fire districts were established, the former being placed under the control of a Metropolitan Fire Brigades Board, and the latter under the control of a Country Fire Brigades Board.

(i.) *Metropolitan Fire Brigades Board.* The metropolitan fire district originally comprised the area included in the several municipalities within a radius of ten miles from the Melbourne General Post Office, but this area has since being extended in certain directions so as to include the greater part of the Shire of Moorabbin and also the township of Mordialloc. The Board is composed of nine members, of whom three are appointed by the Governor-in-Council, three by the municipal councils, and three by the insurance companies. On the 31st December, 1913, the Board had under its control 49 stations, 231 permanent men, 150 auxiliary firemen, 28 special service firemen, 10 steam fire engines, 5 gasoline engines, 2 chemical engines (1 motor), 2 petrol motor fire engines, 104,127 feet of hose, and 251 fire-alarm circuits having 827 street fire-alarms, of which 755 contained telephones. The total length of wire in use outside stations for fire alarms and telephones is about 556 miles.

(ii.) *The Country Fire Brigades Board.* This Board consists of nine members, of whom three are appointed by the Governor-in-Council, two are elected by the municipal councils of the districts where there are brigades registered under the Board, two by the fire insurance companies, and two by the registered fire brigades. At the end of the year 1913 there were 103 municipal councils, and sixty-five insurance companies included in the operations of the Act. All the brigades are volunteer brigades, but in the large towns permanent station-keepers and watchmen are employed. There were 121 registered brigades and 2396 registered firemen at the end of the year 1913.

(iii.) *Financial Operations of both Boards.* The Government, the insurance companies and the municipalities in which the Boards operate contribute equally to the cost and maintenance of the brigades. The following table gives particulars as to the financial operations of the Melbourne Board during each year from 1909 to 1913 inclusive :—

**VICTORIA.—REVENUE AND EXPENDITURE OF METROPOLITAN FIRE BRIGADES BOARD, 1909 to 1913.**

| Particulars.                  | 1909.         | 1910.         | 1911.         | 1912.         | 1913.         |

| <b>Total ...</b>              | <b>58,531</b> | <b>62,938</b> | <b>64,132</b> | <b>76,751</b> | <b>75,848</b> |
| <b>ORDINARY EXPENDITURE.</b>  |               |               |               |               |               |
| Salaries ...                  | 31,759        | 33,742        | 37,913        | 45,613        | 47,210        |
| Interest and sinking fund ... | 8,425         | 11,009        | 9,588         | 9,681         | 8,357         |
| Other expenditure ...         | 18,347        | 18,187        | 16,631        | 21,457        | 20,281        |
| <b>Total ...</b>              | <b>58,531</b> | <b>62,938</b> | <b>64,132</b> | <b>76,751</b> | <b>75,848</b> |

For the year 1913 the receipts of the Country Fire Brigades Board amounted to £16,359, and the expenditure to £16,528.

3. **Queensland.**—In the year 1911 there were twenty-six fire brigades organised in various towns in Queensland. The revenue of these brigades is derived chiefly from grants from the Government, from municipalities, and from the insurance companies, generally in equal proportions, and the following table gives these particulars for the year 1911 :—

**QUEENSLAND.—FIRE BRIGADES.**

| Receipts.                 | Amount.       | Expenditure.                  | Amount.       |
|---------------------------|---------------|-------------------------------|---------------|
|                           | £             |                               | £             |
| From Government ...       | 4,722         | Salaries and wages ...        | 8,248         |
| „ Local authorities ...   | 4,805         | Building, repairs, etc....    | 870           |
| „ Insurance companies ... | 4,711         | Plant, stores, clothing, etc. | 2,008         |
| „ Other sources ...       | 787           | Other ...                     | 2,799         |
| <b>Total ...</b>          | <b>15,025</b> | <b>Total ...</b>              | <b>13,925</b> |

At the end of the year 1911 the fire brigades staffs comprised 54 permanent men, 294 partly paid, and 72 volunteers. The Metropolitan brigade at Brisbane and the South Brisbane brigade protect an area of  $9\frac{1}{4}$  square miles; their joint staffs comprise 55 men. They have three steam engines, one motor turbine, one chemical motor, eight hose reels, and 17,210 feet of hose. There are 38 telephone fire alarms and 35 call points.

4. **South Australia.**—The fire brigades of South Australia are managed by a Board consisting of five members, one being nominated by the Government, one by the Adelaide city council, one by the other metropolitan and country municipalities, and the other two by the contributing insurance companies. The Board is incorporated under the Fire Brigades Act 1913. The revenue of the Board is derived by contributions of three-ninths by the Government, four-ninths by the insurance companies, and two-ninths by the city of Adelaide and the other municipalities subject to the Act, the contributions for 1913 amounting to £22,340. Brigades are established in the following municipalities, viz., Adelaide, Kensington and Norwood, including St. Peter's, Unley, Port Adelaide,

Glenelg, Gawler, Kapunda, Moonta, Kadina, Port Pirie and Port Augusta. The strength of the brigades consists of 87 permanent firemen and 22 auxiliary firemen. The number of calls received during the year 1913 was 307, of which 10 were to fires of a serious nature.

5. **Western Australia.**—Under the Fire Brigades Act 1898, fire brigades were established in a number of the more important centres of population in the State. These brigades were under the control of local boards, and were in some cases municipal and in others volunteer.

An Act to make further provision for the protection of life and property from fire was passed in 1909 and came into operation on the 1st January, 1910. It is called the District Fire Brigades Act, and divides Western Australia into two fire districts under the control of the Western Australian Fire Brigades Board. The Board is constituted as follows:—Two members nominated by the Government; one member nominated by the Perth City Council; one member elected by the Municipalities of Kalgoorlie, Boulder, Coolgardie, and the Kalgoorlie Road Board; one member elected by the Municipalities and Road Boards other than those above-mentioned; three members elected by the Insurance Companies; and one member elected by the Volunteer Fire Brigades. The election of the Board takes place bi-annually, and its income is provided as follows:—Two-eighths by the Government, three-eighths by the Municipalities and Road Boards, and three-eighths by the Insurance Companies. The receipts for the year 1913 amounted to £30,270, and the expenditure to £30,530. The value of buildings and plant belonging to the Board is £46,715.

The whole of the Brigades throughout the State are now controlled by this Board, and number three purely permanent, twelve permanent and partially paid, four partly permanent and partly volunteer, two purely partially paid, and twenty-five purely volunteer brigades; making a total of forty-six. The staff includes a chief officer, deputy-chief officer, third officer, 16 other officers, 86 permanent firemen, 70 partially-paid firemen, and 477 volunteer firemen.

6. **Tasmania.**—Under the present system, the Government, the City Council, and the Fire Insurance Companies contribute equally to the annual expenditure of the Hobart Fire Brigade. It is intended to increase the scope of operations so as to include in the metropolitan district the suburbs of Queenborough, New Town and Glenorchy. Under the new scheme, the estimated annual cost is £2700. There are volunteer brigades under the control of local boards in most of the larger centres of population.

## § 6. Local Government Finance.

1. **Introduction.**—In the preceding parts of this section certain particulars have been given regarding local authorities in each individual State. It is proposed to here give in a comparable form for each State particulars regarding the financial operations of local governing bodies. The areas controlled by these bodies are variously known in the several States as cities, towns, boroughs, shires, municipalities, municipal districts, and road districts. The particulars given in the tables in the two next paragraphs relate to financial years ending as follow:—New South Wales: for the calendar year 1912. Victoria: 30th September, 1912, except Melbourne, 31st December, and Geelong, 31st August, 1912. Queensland: Calendar year, 1912. South Australia: Corporations, 30th November, and district councils, 30th June, 1912. Western Australia: 31st October, 1911, except road districts, 30th June, 1912. Tasmania: Calendar year, 1912.

2. **Number, Revenue, Expenditure and Valuation of Local Authorities.**—The following table gives particulars of the number, revenue, expenditure, and valuation of local authorities in each State and in the Commonwealth during the year 1912. It may be noted that, excepting in Tasmania, the metropolitan water supply systems are not under municipal control; the particulars given of revenue and expenditure for the five States other than Tasmania do not, therefore, include revenue and expenditure on account of these systems.

**NUMBER, REVENUE, EXPENDITURE, AND VALUATION OF LOCAL AUTHORITIES (a)  
IN EACH STATE, 1912.**

| Particulars.                          | N.S.W.        | Victoria.   | Q'land.    | S. Aust.   | W. Aust.       | Tas.       | C'with.     |

| Other ...                             | (e) 161,865   | 173,577     | 114,148    | 59,124     | 597,172        | 32,910     | 1,138,796   |
| Total ...                             | 2,751,939     | 2,051,106   | 924,799    | 416,330    | 1,115,534      | 296,794    | 7,556,502   |
| <b>VALUATIONS.</b>                    |               |             |            |            |                |            |             |
| Capital value of property             | f169,737,901  | 287,872,434 | 54,991,920 | 78,640,713 | (h) 21,339,483 | 31,146,771 | 643,729,222 |
| Annual value of property              | (d) 2,582,788 | 15,423,445  | (g)        | 3,750,186  | h1,381,751     | 1,534,789  | (g)         |

(a) Including particulars for all areas controlled by local governing bodies responsible for the construction and maintenance of roads and streets, such areas being variously known in the several States as cities, towns, boroughs, shires, municipalities, road districts, etc. (b) Exclusive of rates for water-supply and sewerage in metropolitan and most other principal towns, such rates being collected by special boards or general Government. (c) Exclusive of loans in connection with extraordinary works of construction. (d) City of Sydney only. (e) Including redemptions, sinking funds, etc., for municipalities other than Sydney. (f) Unimproved capital value. (g) Not available. (h) Exclusive of District Road Boards.

**3. Local Government Loans, 1912.**—The following table gives particulars for each State of loans raised by local authorities during the year 1912, of loans current at the end of that year, of liability on account of interest and sinking fund, and of loans maturing during 1912:—

**PARTICULARS OF LOANS RAISED BY LOCAL AUTHORITIES, 1912.**

| Particulars.   | N.S.W.    | Victoria. | Q'land.   | S.A.    | W.A.      | Tas.    | C'wealth.  |
|--|-----------|-----------|-----------|---------|-----------|---------|------------|
|  | £         | £         | £         | £       | £         | £       | £          |
| Loans from general Government—   |           |           |           |         |           |         |            |
| Raised during year ...   | ...       | ...       | 52,335    | ...     | 6,700     | 15,425  | 74,460     |

| Loans from other sources—  |           |           |           |         |           |         |            |
| Raised during year ...   | 1,005,155 | 284,234   | (a)       | 41,544  | 589,050   | 82,043  | (a)        |
| Current at end of year ...   | 6,463,696 | 4,808,915 | (a)       | 223,234 | 1,385,777 | 681,739 | (a)        |
| Total—   |           |           |           |         |           |         |            |
| Raised during year ...   | 1,005,155 | 284,234   | (a)       | 41,544  | 595,750   | 97,468  | (a)        |
| Current at end of year ...   | 6,463,696 | 5,011,950 | 1,295,162 | 223,234 | 1,477,782 | 975,421 | 15,447,245 |
| Current loans, exclusive of those obtained from general Government, raised within the C'wealth | 5,323,781 | 4,808,915 | (a)       | 223,234 | 861,044   | 266,263 | (a)        |
| Annual liability on account interest   | 253,162   | 214,634   | 16,632    | 8,502   | 65,365    | 40,794  | 599,089    |
| Total sinking fund at end of year  | 387,118   | 897,944   | 45,617    | 21,462  | 220,867   | 111,956 | 1,684,964  |
| Amount loans maturing during year  |           |           |           |         |           |         |            |
| Redeemed ...   | ...       | (a)       | (b)       | 15,162  | 12,632    | 59,444  | (a)        |
| Renewed ...  | 120,535   | (a)       | (a)       | 1,900   | ...       | 5,875   | (a)        |

(a) Not available. (b) In the case of loans from Government the periodical payments include interest and sinking funds. (c) Excluding £841 credited to three municipalities, but which was not in the hands of the Sinking Fund Trustees on 31st October, 1912.

## SECTION XXVII.

### INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

#### § 1. Development of Trades Unions in Australia.

1. **General.**—In Australia, industrial unionism paved the way for industrial legislation. Conditions of employment were on the whole favourable to the investigation of industrial problems; and experimental legislation was possible because of the simplicity and directness of the aim of those engaged in industrial occupations. Moreover, the fact of the non-existence of the complex problems and organisations of older countries rendered initial legislation comparatively easy. Hence rapid changes in laws regulating industry occur and are likely to occur. To a great extent the trades unions were responsible for these laws. They steadily and continuously urged an amelioration of the condition of the working man, and by organisation and discipline they presented a united front to opposing forces, and attained many advantages by a recognition of the principle that unity is strength. Their efforts have resulted in improved conditions, particularly short hours, a healthier mode of life, and safeguarding against accident. One great aim of present-day industrial legislation has been said to be to extend "the reasonable comforts of a civilised community" to those engaged in every branch of industry. The standard of wages must therefore be maintained at a satisfactory level. Large organisations have been able to attain their ends by force of numbers, and, in the case of the great bulk of the artisan and similar classes, through the solidarity of their unions. The smaller and less perfectly organised industries, unable to maintain an effectual struggle with hope of success, are now receiving, by legislative enactment, the benefits already gained by the trades unions. Industrial organisation by means of unions now tends to embrace all classes of wage-earners.

While the demands of the early unionists have almost in their entirety been conceded by the employer, unionism nevertheless continues. Industrial legislation aims at restricting industrial warfare by a satisfactory adjustment of industrial differences, without derangement of the economic system, but it has not yet reached the stage when conflicts between employer and employees cease.

Each State of the Commonwealth has enacted, with considerable elaboration, legislation respecting trade unions and respecting the regulation of the conditions of industrial life, particularly those of factory and shop employment. Machinery for the regulation of wages and other matters connected with employment has also been established by legislation.

At the present time there is an obvious tendency to adjust such matters throughout Australia on uniform lines. The industrial condition of any State of the Commonwealth naturally reacts quickly on any other State. This is one of the consequences of a unified tariff, and of the fact that the general economic conditions of one part of the Commonwealth must necessarily affect very intimately every other part. An expression

of the intimacy of these economic and industrial relations of different parts was seen, for example, when the Arbitration Court in New South Wales refused to fix wages in the boot trade in that State at a higher rate than that fixed by the Wages Board in Victoria, because of the additional burden which such a rate would place on local manufacturers. Collective bargaining is encouraged, through the medium of legal tribunals where necessary, argument and diplomacy taking the place of open strife. Legislation gives legal form and status to the unions, and allots to them legal responsibility. The workman is encouraged, and in some cases compelled, to treat with his employer through his union, and in some cases the industrial courts are authorised to direct that preference be given to unionists.

**2. History of Unionism in Australasia.**—(1.) *Commencement of Unionism : the Eight Hours' System.* The first trade union in Australia was the "Operative Masons' Society," established in Melbourne in 1850. In 1851 a branch of the "English Amalgamated Society of Engineers" was founded in Sydney. For many years the only unions existing were practically those formed by the several branches of the building trades. They were all subject to the English law prohibiting conspiracies and combinations in restraint of trade, though it does not appear that such law was ever put in force in Australia. The main object of the early unions in Australia was the limitation of the working week to forty-eight hours. The minor and friendly society benefits that were usual amongst the unions of older countries were also desired ; but the chief aim was the establishment of the eight hours' principle, and that aim for many years was the chief link between the unions. It is difficult to obtain detailed information concerning the unions prior to trade union legislation, but their early history generally resolves itself into an account of the early efforts put forth by metropolitan operatives to secure the limitation of the working day to eight hours. The desire to restrict Chinese immigration operated as a further incentive to combined effort. For the restriction to be effective, co-operation between the colonies was necessary. The question therefore promoted enlargement of view, and fostered amongst the workmen of Australia the sense of community of interest.

(ii.) *New Zealand.* The system was first put into practice in Australasia in 1848 by the "Otago Association," which purchased an area of land upon Port Chalmers, N.Z., and proceeded to build the town of Dunedin, under a system which recognised the eight hours day, thus instituting, in the New World of the south, that period of toil as the limit of the working day. Thus the system began voluntarily in New Zealand long before the unions that demanded and acquired it in Australia had come into existence. But many years elapsed in the Dominion before trades unionism became an established fact. The first Congress of New Zealand Trades was held in 1885. In that year, too, the general celebration of the eight hours' principle by the combined trades was inaugurated.

(iii.) *New South Wales.* In New South Wales, the operative masons obtained the eight hours' concession in 1855, after a strike ; but little development of the movement was noticeable until 1871, in which year four eight-hour trades—the brickmakers, stonemasons, labourers, and carpenters—inaugurated the annual celebration.

(iv.) *Victoria.* The first Melbourne Eight Hours' procession was held in 1856, the trades taking part being the masons, bricklayers, carpenters and joiners, plasterers, painters, and slaters. In the following year nine trades and about 700 men took part in the function ; but the principle of the Eight Hours' Day had been recognised, and new unions were quickly established under the influence and guidance of the pioneers of the movement.

(v.) *Queensland.* After the fever of the gold rush to the Fitzroy River had subsided, settled conditions prevailed in the building industry, and the trades, being well established and organised in Queensland, celebrated their inaugural festival of the eight hours in 1866. In Brisbane, as in Melbourne, the pioneer trade was the stonemasons.

(vi.) *South Australia.* In South Australia, the establishment of the eight hours' system by the unions was accomplished in 1873, the building trades, represented by the stone-cutters, painters, and carpenters, again being the leaders.

(vii.) *Western Australia.* The discovery of gold in Western Australia caused rapid development in the infant cities and towns of that State, and mechanics found abundant employment in the building trades. Unions were soon formed, and the eight hours became an established system in 1896.

(viii.) *Tasmania.* Trade Unions were established in Tasmania in 1874, the shipwrights of Hobart being the pioneer society. Here, as on the mainland, the eight hours' day was the chief aim of the operatives, and here, as in Sydney, it was conceded only after a strike. Within a few years, the general system of trades unions was instituted. The inaugural celebration of the system was celebrated in 1890.

(ix.) *The System Universal throughout Australasia.* No provision for eight hours was made in the original documents which set out the conditions of labour under which the members of the Otago (N.Z.) Association were to work in 1848. It was intended to insert a clause embodying the principle, but it was found that such a clause would be inoperative, as contracts to bind free settlers to serve under any conditions of labour beyond the seas were not provided for by any Imperial Statute. The system, however, was tacitly agreed to by both parties, and quietly and voluntarily the eight hours' day was established. Not so amicable were the methods by which it was acquired in the other colonies. There had to be unions of men and unions of trades, before the requisite forces were available to overbear opposition to the system, and, at any rate in two cases, the tradesmen resorted to strikes before the concession was granted. Generally it may be said that trades unions in the Commonwealth sprang out of the desire for an eight hours' day; and with the Western Australian celebration of 1896, trades unionism, with its eight hours' charter, completed its circuit of the Commonwealth. From 1880 to 1890 there was, in the States where industry was systematised, great activity in the organisation of labour, more particularly at the end of that period. In sympathy with the widespread industrial unrest in England the occurrence of similar unrest in Australia drew the wage-earners into the unions in large numbers.

(x.) *Organisation of Unions.* The first regular association of unions in Australia was the Trades Committee in Melbourne, formed in 1859, which afterwards became the present Trades and Labour Council. Similar councils now exist in all the States. Composed of delegates from the unions, they exercise a general care over the interests of their members.

(xi.) *Union Acts.* The Trade Union Acts of England and the collateral Conspiracy and Protection of Property Act were copied by the States, the Acts also providing for unions of employers. Except in Western Australia, the latter provision has been but slightly utilised, as apparently it offers no well-defined inducement. South Australia adopted the Acts in 1876, New South Wales in 1881, Victoria in 1894, Queensland in 1886, Tasmania in 1889, and Western Australia in 1902.

The Acts referred to provide for the legal recognition of combinations which come under the definition of trade unions; the registration of unions of seven or more persons, the registration of councils or other bodies to which registered trade unions are affiliated, the vesting of union property in registered trustees, with penal provisions in respect of defaulting officers. The registered unions are required to furnish annual returns of members and funds to a special department.

**3. Operations and Organisation of Unions subsequent to the Acts.—(i.) Unions.** Except as hereinafter mentioned, the Unions do not avail themselves of the Trade Union Acts to any large extent, in many cases neglecting to register.

In some States there is a considerable difference between the numbers of registered and unregistered unions, as, for instance, in Victoria, where there are 151 unions and only thirteen are registered.

The failure to register under the Trade Union Acts does not deprive the unions of the privileges conferred by the Conspiracy Acts.

(ii.) *Membership of Unions.* At the end of the year 1912, there were, in Australia, 433,224 members of trade unions.

(iii.) *Concerted Action.* The consummation of the eight hours' system, at which the early unions had aimed, was followed by demands for further concessions and privileges. An intercolonial congress of delegates of trades unions, modelled upon a similar conference of labour organisations in Great Britain, was first held in Sydney in 1879. At the second congress in Melbourne, in 1884, sixty-nine delegates from New South Wales, Victoria, and South Australia were present, representing forty-one unions, branches, or societies. Following the methods of European associations the Australian unions sought to achieve an improved condition for their members by the establishment of rules concerning minimum wage, limited hours of toil, the restriction of the number of apprentices and improvers, and the prohibition of the employment of non-union labour; political reforms, such as payment of Members of Parliament, "one man one vote," were also agitated. Some of the unions refuse to admit to membership any but skilled journeymen, on the ground that their object is to encourage the attainment of proper skill.

(iv.) *Representation in Parliament.* It was during the decade 1880-1890 that the trade unions of Australia espoused direct legislative representation and advocated State intervention between employer and employee. This policy has been called "new unionism." In New South Wales, trade unions obtained direct representation in Parliament in 1881, and again in 1883. A resolution affirming the desirability of Parliamentary representation of labour being carried at the congress of 1884, members representing the special interests of the wage-earners were elected to the Legislatures of some of the States, but little action was taken by the unions to obtain representation by men chosen from among their own ranks until after the great labour troubles of 1890-1892. In that period serious strikes occurred in the maritime, shearing and mining industries, and it was then that the Labour Party proper was formed. One direct result of the outbreak was the recognition of the desirability of peaceful settlement of disputes. The Political Labour Party was accordingly organised, and has since held considerable power in most of the States, frequently occupying the Treasury benches. In 1904, 1908-9, and 1910-13 Labour Governments occupied the Commonwealth Treasury Benches, the elections held in April, 1910, having resulted in the Labour party gaining an absolute majority in both of the Federal Houses of Parliament. The present Governments in

New South Wales, Western Australia and Tasmania are Labour. South Australia and Queensland have also had Labour Governments; and in Victoria the Labour party is an important element in Parliament.

Triennial federal conferences laid down a policy for the party. The Political Labour Council controls political and the Trades Hall Council trade union matters. The former consists of delegates from both unions and "branches." The branches are coterminous with State electoral districts, and nominate candidates for those districts. Candidates for the Commonwealth Senate are balloted for by all league members in the State, and for the Commonwealth House of Representatives by the branches in the constituency.

4. **Registration under Trade Union Acts.**—The benefits conferred by registering Trade Unions are not, in some of the States, held in much repute; consequently the statistics of registered trade unions of employees not only do not represent the position of unionism, but, in addition, the statistics themselves for past years are so defective as to be practically valueless. The particulars furnish no reliable indication of the numerical and financial position of Trade Unions. It will be seen that some of the registered unions fail to supply returns; this non-supply may lead to cancellation of the registration. Some of the unions have obtained the cancellation of their certificates of registration, the apparent reason being that they proposed registering under the Commonwealth Conciliation and Arbitration Act. In some States considerable activity has been displayed in the formation of new unions. In others the benefits sought are obtained by other means. In Queensland, some of the largest labour unions withdrew from registration during 1911, mainly on account of the necessity for closer restriction of their objects as set forth in their rules, consequent on legal decisions affecting trade unions. The following table shews the number of trade unions registered under Trade Union Acts at the end of 1912, together with their financial condition:—

**TRADE UNIONS REGISTERED UNDER TRADE UNION ACTS, NUMBER, MEMBERSHIP AND FINANCIAL POSITION, 1912.**

| State.              | Number of Unions. |             |        | Membership of Unions. |             |         | Receipts, 1912. | Expenditure, 1912 | Funds at end of 1912. |

\* Information regarding seven of these Unions not available, † Not available.

5. **Registration under Industrial Arbitration Acts.**—Western Australia and New South Wales up to 30th June, 1908, were the only States with Industrial Arbitration Acts under which industrial associations could be, and actually were, registered. The number of registered unions in New South Wales shewed a gradual increase from 1902 to 1907, the figures in the latter year being 109 unions of employers, with 3165 members, and 119 unions of employees, with 88,075 members. Under the Industrial Disputes Act, which succeeded the Arbitration Act of 1901, the information is not required to be furnished. Since the Act of 1908 has operated, industrial organisation has proceeded rapidly, owing to a very evident general desire on the part of the workers to obtain the status necessary to entitle them to the advantages offered by the Act. The Act of

1908 was repealed by that of 1912, and in 1912 there were 117 industrial unions of employers and 192 industrial unions of employees on the register. Of the former, 25 have ceased to exist, but have not been formally removed from the departmental register, and of the latter, 36, having permitted their registration in trade unions to be cancelled, may be regarded as having ceased to exist as industrial unions. In Western Australia, the employers' unions numbered 45, with 441 members, in 1904; 59 unions, with 520 members, in 1905; 57 unions, with 534 members, in 1906; 56 unions, with 552 members, in 1907; 48, with 409 members, in 1908; 47, with 408 members, in 1909; 46, with 444 members, in 1910; 46, with 554 members, in 1911; and 49, with 749 members in 1912. From 1904 to 1908 unions of employees were in a fairly stationary condition. Since 1909, however, there has been a rapid expansion. At the end of 1904 and 1905 there were 140 unions, with 15,743 and 15,461 members respectively; in 1906 there were 130 unions, with 16,015 members; in 1907, 121 unions, with 14,544 members; in 1908, 121 unions, with 15,187 members; in 1909, 122 unions, with 17,282 members; in 1910, 130 unions, with 20,429 members; in 1911, 152 unions, with 28,934 members; and in 1912, 158 unions, with 30,453 members. These figures include councils and associations. Registration under Commonwealth legislation began in 1906. In that and the four following years, there was but one union of employers; another was registered in 1911. The unions of employees registered were 20 in 1906, with 41,413 members; 24, with 57,306 members, in 1907; 37, with 69,536 members, in 1908; 7, with 14,161 members, in 1909; 10, with 3760 members, in 1910. Twenty-four unions of employees were registered in 1911. The membership given above is that at time of registration. At the end of 1912 there were 3 employers' organisations, with 351 members, and 96 employees' organisations, with 245,735 members, on the register under the Commonwealth Conciliation and Arbitration Act.

6. **Total Number of Unions, 1912.**—As already stated, the figures for trade unions registered under the Acts do not represent the position of unionism in Australia. In 1912 the Labour and Industrial Branch of the Commonwealth Bureau of Census and Statistics was established, and by the cordial co-operation of the officials of the labour organisations, comprehensive figures relating to the development of organised labour are now available. The following table gives particulars of the number of trade unions, the number of branch unions, and the number of members in each State and the Commonwealth at the end of 1912:—

**TRADE UNIONS, BRANCH UNIONS, AND MEMBERS, STATES AND  
COMMONWEALTH, 1912.**

| State.                      | Number of<br>Separate Unions. | No. of Branches. | No. of Members. |
|-----------------------------|-------------------------------|------------------|-----------------|
| New South Wales ... ..      | 177                           | 453              | 192,626         |
| Victoria ... ..             | 151                           | 241              | 116,557         |
| Queensland ... ..           | 67                            | 226              | 44,768          |

| <b>Total ... ..</b>         | <b>621</b>                    | <b>1,192</b>     | <b>433,224</b>  |
| <b>Commonwealth* ... ..</b> | <b>408†</b>                   | <b>1,405</b>     | <b>433,224</b>  |

\* Allowing for interstate excess. † Number of distinct organisations and interstate groups of organisations in the Commonwealth—not the total number of organisations, which are practically independent and self-governing. (See next page.)

In the preceding table the number of separate unions in each State furnishes the number of unions which are represented in each State, exclusive of branches within a State. That is to say, each union represented in a State is only counted once, regardless of the number of branches in that State.

Except in the last line, the number of branches indicates the number of branches of State head offices, which may, of course, themselves be branches of an interstate or larger organisation. In taking the total number of separate unions in the Commonwealth (see last line), it is obvious that, in the case of interstate and similar unions, there will be duplication, since each such union is counted once in each State in which it has any branches. In the figures given in the last line allowance has been made for this duplication. State branches of interstate or federated unions, as well as sub-branches within a State, are included under the heading "Branches" in the third column—last line. It should be observed, however, that the scheme of organisation of these interstate or federated unions varies greatly in character, and the number of separate Commonwealth unions does not fairly represent the number of practically independent organisations in Australia. In some of these unions the State organisations are bound together under a system of unification with centralised control, while in others the State units are practically independent and self-governing, the federal bond being loose and existing only for one or two specified purposes. It may be seen, therefore, that there are 408 distinct organisations and interstate groups of organisations in the Commonwealth, having 1405 State branches and sub-branches, and a total of 433,224 members.

**7. Development of Trade Unions in Australia, 1891 to 1912.**—The following table shews for the years specified the total number of trade unions in the Commonwealth, and the number and membership of those unions for which returns are available. The estimated total membership of all unions is shewn in the last line. The number of unions specified is the sum of the number of separate unions represented in the several States, no deduction having been made for interstate excess.

The figures given do not include particulars of comparatively small and unimportant unions which were in existence prior to the year 1912, but which, by that year, had either become amalgamated with other unions or had been disbanded or become defunct. Particulars for the more important unions in existence prior to 1912, but not in existence in that year, have, however, been included in all cases where possible. The actual returns received at this Bureau from trade unions have, in some instances, where memberships for past years were not given, been supplemented from particulars published by the State Registrars of Trade Unions.

#### NUMBER AND MEMBERSHIP OF TRADE UNIONS IN COMMONWEALTH, 1891 to 1912.

| Particulars.                                 | 1891.  | 1896.  | 1901.  | 1906.   | 1907.   | 1908.   | 1909.   | 1910.   | 1911.   | 1912.   |
|--|--------|--------|--------|---------|---------|---------|---------|---------|---------|---------|
| Total number of unions                       | 124    | 134    | 198    | 302     | 323     | 378     | 419     | 482     | 573     | 621     |
| No. of unions for which membership available | 72     | 83     | 139    | 253     | 286     | 334     | 375     | 442     | 542     | 621     |
| Membership of these unions                   | 31,871 | 34,108 | 68,218 | 147,049 | 172,310 | 212,483 | 244,747 | 277,047 | 344,999 | 433,224 |
| Estimated total membership of all unions     | 54,888 | 55,066 | 97,174 | 175,529 | 194,602 | 240,475 | 273,464 | 302,119 | 364,732 | 433,224 |

These figures shew that while the number of unions in 1912 was just over five times the number in 1891, the estimated membership during the same period increased nearly eight times. During the last six years the estimated annual increase in membership was greatest in the year 1912, when it amounted to no less than 68,492.

The present tendency of the trade union movement in Australia is towards "closer unionism," generally by the organisation of the workers in two or more States into interstate or federated unions, and by the grouping together of trades or industries more or less closely allied. Particulars are not available for past years as to the number of separate organisations in the Commonwealth, that is, allowing for interstate excess in

the enumeration of unions within each State. It appears certain, however, that the number of separate organisations and interstate groups of organisations in the Commonwealth has, owing to the tendency referred to, increased to a less extent than the figures in the preceding table indicate.\* It is expected that in future this tendency will be clearly reflected in the returns, in which deductions will be made for interstate excess.

**8. Interstate or Federated Unions, 1912.**—The following table gives particulars as to the number and membership of interstate or federated unions in 1912 :—

**NUMBER AND MEMBERSHIP OF INTERSTATE OR FEDERATED UNIONS  
IN THE COMMONWEALTH, 1912.**

| Particulars.          | Unions Operating in— |           |           |           |           | Total.  |
|-----------------------|----------------------|-----------|-----------|-----------|-----------|---------|
|                       | 2 States.            | 3 States. | 4 States. | 5 States. | 6 States. |         |
| Number of Unions ...  | 20                   | 11        | 17        | 14        | 10        | 72      |
| Number of Members ... | 31,358               | 18,147    | 55,517    | 43,548    | 131,201   | 279,771 |

It appears, therefore, that 72 out of the 408 separate associations and groups of associations in the Commonwealth are organised on an interstate basis. The membership of these 72 unions amounts to 279,771, or no less than 64.6 per cent. on the total membership (433,224) of all unions.

**9. Central Labour Organisations.**—In each of the metropolitan towns, as well as in a number of other industrial centres, delegate organisations, consisting of representatives from a group of trade unions, have been established. Their revenue is raised by means of a per capita tax on the members of each affiliated union. In most of the towns where such central organisations exist, the majority of the local unions are affiliated with the central organisation, which is usually known as the Labour or the Trades Hall Council or the Labour Federation. In Queensland and Western Australia a unified system of organisation extends over the industrial centres throughout each State. In each of these States there is a provincial branch of the Australian Labour Federation, having a central council and executive, a metropolitan and branch district councils, to which the local bodies are affiliated. The central council, on which all district councils are represented, meets periodically. In the other four States, however, the organisation is not so close, and though provision usually exists in the rules of the central council at the capital town of each State for the organisation of district councils or for the representation on the central council of the local councils in the smaller industrial centres of the State, the councils in each State are, as a matter of fact, independent bodies.

The table below shows the number of metropolitan and district or local labour councils, together with the number of unions and branches of unions affiliated therewith, in each State in February, 1913 :—

**CENTRAL LABOUR ORGANISATIONS—NUMBER AND UNIONS AFFILIATED,\* 1913.**

| Particulars.   | N.S.W. | Vic. | Q'land. | S.A. | W.A. | Tas. | C'w'th. |
|--|--------|------|---------|------|------|------|---------|
| No. of Councils ...  | 3      | 4    | 2†      | 4    | 11   | 1    | 25      |
| Approximate No. of<br>Unions and Branch<br>Unions Affiliated ... | 151    | 186  | 21      | 73   | 130  | 23   | 584     |

\* On page 905 it is shown that the number of separate organisations and interstate groups of organisations in the Commonwealth in 1912 was 408, compared with 621, the sum of the separate unions in the several States.

† In addition, two important unions are directly affiliated to the Provincial Council of the Australian Labour Federation.

The figures given in the preceding table as to number of unions do not necessarily represent separate unions, since the branches of a large union may be affiliated to the local trades councils in the several towns in which they are represented.

Between the trade union and the central organisation of unions may be classed certain State or district councils, organised on trade lines and composed of delegates from separate unions, the interests of the members of which are closely connected by reason of the occupations of their members, such, for example, as delegate councils of bakers, bread carters and mill employees, or of unions connected directly or indirectly with the iron, steel or brass trades, or with the building trades.

## § 2. Laws Relating to Conditions of Labour.

1. **Tabular Statement of Statutes affecting Labour.**—The statutes in force at the beginning of 1914 in the several States of the Commonwealth, which, more or less directly, affect the general conditions of labour, are shewn in the table below. Where merely an incidental reference to labour conditions is made in a statute, as is the case with, *e.g.*, the Hawkers and Pedlars Act 1892 of Western Australia, or the Firms Registration Act 1899 of South Australia, or the Health Act sgenerally, the statute is not included in the table.

LABOUR LAWS—TABLE OF STATUTES IN FORCE IN AUSTRALIAN STATES, 1913.

\* The "Truck" system, as applied to labour, was one by which the master obtained the labour of his servants in exchange for goods or commodities on which it is stated he generally secured a profit. The system is now almost entirely suppressed by the various statutes enacted. † New South Wales Acts unrepealed in Queensland after Separation in 1859.

**2. Benefits sought to be Conferred by the Acts.**—(i.) *General Provisions.* The legislation enacted has generally had for its object the shortening of hours, improving and fixing standard rates of wages, provision of sanitary accommodation, ventilation and cleansing of premises, safeguarding from accident, and general amelioration of the conditions of labour, particularly that of females and children, in factories. The principal provisions of these statutes are set out in the table hereinafter.

(ii.) *Historical.* The first Australian Factories Act was passed in 1873 in Victoria, and became law on 1st January, 1874. It was entitled "The Supervision of Workrooms and Factories Statute," and contained only six sections. Its principal provisions were (a) that any place in which not less than ten persons were engaged for hire in manufacturing goods should be constituted a factory; (b) that such factories, as to building, sanitation, etc., should be subject to regulations made by the Central Board of Health; and (c) that no female should be employed for more than eight hours in any one day without the permission of the Chief Secretary. The administration of the Act was entrusted entirely to the local Boards of Health, and the system was found to be less effective than was hoped. The conditions which have given rise to trouble in the old world tended to reproduce themselves in the young and growing industries of the States. Factory workers had to contend with the absence of security for a living wage, unsatisfactory sanitary surroundings, and unchecked and unscrupulous competition of Chinese in certain trades. The advocacy of legislation to control the conditions of employment became pronounced in Victoria in 1880, and a strike of tailoresses in Melbourne in 1882 led to a recognition of the real state of affairs. As a result of unsatisfactory working under the local governing bodies, and on account of agitation of the operatives, a commission was appointed in 1883, and reported the necessity of legislation for the regulation of factories, and in particular pointed out the fact that men were compelled to toil for as many as eighteen hours and women sixteen hours a day. It also shewed that the condition of out-workers was very undesirable, and that the apprenticeship system was frequently used to obtain labour without remuneration, apprentices being dismissed upon asking for payment at the end of their time. The Factories and Shops Act 1884, while providing for the suppression of many evils in respect of accommodation and lengthy hours, did not touch the two last mentioned. It provided for Government inspection, and also that six persons should constitute a factory if the premises were situated in a city, town or borough. In 1887 a short amending Act was brought in to remedy some defects that were found to exist. Its principal provision was that any place in which two or more Chinese were engaged should be deemed a factory. In 1893 a further enactment reduced the number of persons constituting a factory to four. Another Royal Commission sat in 1895, resulting in the Act of 1896, which dealt with matters previously untouched, and the system of regulation was carried on by the Act of 1900 and the complete codification of the law in 1905, and again in 1912.

Similar conditions to those which existed in Victoria were found to prevail in other States. New South Wales and Queensland first adopted regulative measures in 1896, South Australia in 1894, and Western Australia in 1902. Tasmania adopted the Victorian Act of 1873 in 1884.

The same remarks apply in a general way to the condition of employees in shops.

**3. Limitation of Hours.**—(i.) *Factories.* As already remarked, the adoption of the eight hours' system for adult males has generally been the outcome of the representations made by the trade unions. Except in New Zealand, there is no general legislation to enforce the principle, although there is now a general recognition of it. A week of forty-eight hours is the usual working week. The larger unions, however, have lately moved for a *net* day of eight hours, with Saturday half-holiday, no loading of other week days being permitted by way of compensating for the Saturday afternoon. Under this scheme there are, for five days, equal divisions for periods of labour, recreation, and rest, and four hours' work on Saturday, making a working week of forty-four hours. In the majority of occupations, forty-eight hours weekly is the recognised limit of work. On

the establishment of Wages Boards and Arbitration Courts, in the States where those institutions exist, the authorities thus created adopted the rule as part of their determinations and awards wherever it seemed reasonably practicable. In some of the larger classes of building trades, the hours have been reduced to forty-four a week, and in some technical and specialist trades, a lower maximum has been fixed, such for example, as the type-setting machine operators in Victoria, for whom the maximum has been fixed by the Wages Board at forty-two hours weekly. Reasonable provision is made by statute or award for work performed outside the scheduled hours. Organisations of employees, however, oppose overtime in any industry until all the operatives in that industry are working full time.

In the case of women and children there has been very general enactment in the States of the forty-eight hours' limit, and in addition, the maximum periods of continuous labour, and the intervals of cessation therefrom, have been prescribed in all the States. New Zealand has fixed a weekly maximum of forty-five hours for females and boys under 16. The first enactment of the forty-eight hours' limit in Australia was in 1873, when the Parliament of Victoria fixed that period for women and girls in factories.

(ii.) *Shops.* All the States have statutes containing provisions respecting the hours during which shops in large centres may be kept open for business. These provisions, in effect, not only limit the hours during which shop-hands may be employed, but apply also where the shops are tended by the proprietor alone, or by himself and family, with, however, certain exceptions. In Victoria, for example, shops wherein not more than one assistant, whether paid or not, was employed, were permitted to remain open for two hours a day longer than other shops of the same class. The object of this was to relieve the hardship which existed for such persons as, for example, widows who were wholly dependent for a livelihood upon the casual trade of small shops. It is, however, reported that little or no benefit accrued from the permission. In each of the States the closing time of shops, except those specially exempted, is 6 p.m. on four days of the week, 10 p.m. on one day (except 9 p.m. in Queensland, South Australia, and Western Australia), and 1 p.m. on one day—thus establishing a weekly half-holiday. In Western Australia the opening hour is fixed at 8 a.m. In addition to fixing the closing hour, the total daily and weekly working hours are delimited in the case of women and children. In some States, butchers' shops must be closed an hour earlier than other retail establishments, the reason being the early hour at which assistants must start to attend to the markets and early morning trade.

(iii.) *Hotels, etc.* Establishments, the opening of which in the evening is presumably necessary for public convenience—such as hotels, restaurants, chemists' shops, etc.—are required to remain open for longer hours or are permitted to do business during hours prohibited in other establishments.

(iv.) *Half-holidays.* The provisions of the early closing laws differ somewhat in each State, but the main objects, namely, the restriction of long hours of labour, are identical throughout. Formerly, in some of the States, there were, and there are still in others, provisions making the early closing of a business, or the selection of a day for a half-holiday, dependent upon the option of the majority of the business people concerned, or upon the local authority. The anomalous results of the system whereby shops on one side of the street bounding two municipalities were open, when those upon the other side were closed, led to the introduction of the compulsory system, whereby the hours of business are absolutely fixed by statute. In Queensland, the day of the weekly half-holiday is fixed for Saturday. In Victoria also the Saturday half-holiday became compulsory in 1909, and in New South Wales in the following year, and there is a strong movement throughout the Commonwealth in favour of closing on the afternoon of that day.

(v.) *Exempted Trades.* The hours for shops exempted from the general provisions of the Acts are also prescribed, and special holidays are provided for carriers.

**4. Other General Conditions of Labour.**—Measures for the protection of life, health, and general well-being of the worker, tabulated hereunder, exist in most of the States. Though in some instances founded upon English legislation, many of the provisions are peculiar to Australia. Despite experience and continued amendment they have not even yet attained to a settled form. Of the Australian States, Victoria originally had the most complete system of industrial legislation. Other States gradually adopted the Victorian statutes, either *en bloc* or with amendments suggested by local conditions. Western Australia followed very closely the legislation of New Zealand, where also the measures for the amelioration of the industrial conditions are enforced by law.

**5. Administration of Factories and Shops Acts.**—The provisions of Factories and Shops Acts and of the Early Closing Acts in some of the States are consolidated under a single Act, but in others are separate enactments. The chief provisions of the principal Acts for registration, administration, record-keeping, etc., and of regulations under those Acts, are set out in the following summary :—

- (a) Factories are defined to be places where a certain number of persons are employed in making or preparing goods for trade or sale, or in which steam or other power is employed, or where special classes of industry are carried on. In some States the employment of a Chinese, in some of any Asiatic, constitutes the place a factory.
- (b) A Minister of the Crown administers the Act in conjunction with a Chief Inspector of Factories. Inspectors visit the factories with full powers of entry, examination, and enquiry; these are of both sexes, females being employed in that portion of the work where a woman is particularly necessary. Broadly speaking, these powers confer upon the Inspector the right to enter, inspect, and examine, at all reasonable hours by day and night, any factory where he has reason to think anyone is employed; to take a police constable, if necessary, to assist him in the execution of his duty; to require the production of all certificates, documents, and records kept by the occupier, in accordance with the terms of the enactments; to examine, either alone or in the presence of any other person, every person whom he finds in a factory; to make whatever examination he deems necessary to ascertain whether the provisions of the Act are complied with.
- (c) Registration of factories before occupation is obligatory. Description of premises and statement of the work to be done must be supplied, and a certificate of suitability of premises obtained.
- (d) A record of all employees, giving the names, ages, wages, and work of each under a certain age (18, 20, 21, etc.) must be kept and filed in the Chief Inspector's office.
- (e) Names and addresses of district inspectors and certifying medical practitioners must be posted; also the working hours, the holidays, and the name, etc., of the employer.
- (f) Records of out-work must be kept, containing the names and remuneration of workers, and stating the places where the work is done. Out-workers are required to register.
- (g) Places in which only the near kin of the occupier are employed are generally exempt from registration.
- (h) Meals may be prohibited in workrooms, etc. In some States occupiers are required to furnish suitable mealrooms.

- (i) The employment in factories of young children is forbidden, and medical certificates of fitness are required in the case of young persons under a certain age. Special permits, based on educational or other qualifications, may be issued for young persons of certain ages.
- (j) Guarantees of an employee's good behaviour are void unless made with the consent of the Minister.
- (k) Persons in charge of steam engines or boilers must hold certificates of service or competency.
- (l) Provision (safeguarding against accident) is made for the fencing off and proper care of machinery, vats, and other dangerous structures. Women and young persons are forbidden to clean machinery in motion or work between fixed and traversing parts of self-acting machinery while in motion; and dangerous trades are specified in which a minimum age is fixed. Notice of accidents must be sent to the district inspector. (Dangerous trades are generally under the administration of Boards of Health.)
- (m) Provision is made for the stamping of furniture, the object being to disclose whether it is made by European or Chinese labour.
- (n) Minimum wage provisions are inserted. Premiums to employers are forbidden.
- (o) Sanitation and ventilation must be attended to, and fresh drinking water supplied. Separate and adequate sanitary conveniences for each sex are required.
- (p) Shopkeepers are required to provide proper seating accommodation for female employees. (In some States this is the subject of special legislation.)
- (q) A dressing-room for females must be provided in factories the manufacturing process of which requires a change of dress.
- (r) Adequate protection must be made against fire, and efficient fire-escapes provided.
- (s) Wide powers of regulation are granted to the Executive and heavy penalties imposed, including a penalty by way of compensation to any person injured or the family of any person killed through failure to fence machinery and other dangerous structures.

**6. Registered Factories.**—The number of establishments registered under Factories Acts is shewn below:—

#### FACTORIES REGISTERED UNDER ACTS, 1913.

| State.                | No. of Registered Factories. | Numbers Employed. |          |         |
|-----------------------|------------------------------|-------------------|----------|---------|
|                       |                              | Males.            | Females. | Total.  |

† At 31st December, 1913.

**7. Comparative Statement of Factories Law in Australia.**—The tables which follow shew at a glance the chief provisions of the Factories and Shops Acts in the Commonwealth:—

## A.—EMPLOYMENT IN FACTORIES.—COMPARATIVE VIEW OF

| HEADING.                                      | NEW SOUTH WALES.   | VICTORIA.   | QUEENSLAND.  |
|---|--|---|--|
| <i>Principal Acts</i>                         | Factories and Shops 1912.  | Factories and Shops 1912<br>" " 1912 (2).   | Factories and Shops 1900.<br>" " 1908.   |
| <i>Application of Acts—Limitations</i>        | In districts proclaimed. Not applicable where all the workers are members of the same family. Not applicable to woolsheds, dairies, or ships. Governor may exempt any factory or class of factory in any district.   | In cities, towns and boroughs; also shires to which extended. Not applicable to dairying, agricultural, horticultural, viticultural and pastoral occupations. Not applicable to laundries attached to prisons or religious and charitable institutions.   | Only in areas proclaimed. Not applicable to prisons, reformatories, dairies, mines, agricultural buildings, and domestic workshops. Governor may exempt partially or wholly any factory or class of factories in a given district.   |
| <i>Definition of Factory—By Nos. Employed</i> | Four or more.  | Four or more.   | Two or more (including occupier).  |
| " Asiatics "                                  | One or more Chinese.   | One or more Chinese.  | One Asiatic.   |
| " Power used "                                | Steam or mechanical.   | Steam or mechanical.  | Steam or mechanical.   |
| " Special classes included "                  | Bakehouses.  | Bakehouses, laundries, dye-works, quarries, clay-pits, furniture.<br>Gas and electric light, &c., works.  | Bakehouses, laundries.   |
| <i>Administration</i>                         | Minister of Labour.  | Minister of Labour.   | Secretary for Public Works.  |
| <i>Inspectorate</i>                           | Inspectors with full powers of entry, examination and enquiry.   | Inspectors with full powers of entry, examination and enquiry.  | Inspectors with full powers of entry, examination and enquiry.   |
| <i>Registration</i>                           | Seven days' prior notice.  | Fourteen days' notice after occupation.<br>Annual re-registration.  | Seven days' prior notice.  |
| <i>Outwork</i>                                | Occupier of factory to keep record, shewing places where work done and rates of payment.   | Occupier to keep record of description, quantity, remuneration, names and addresses. Out-workers must register in clothing, wearing-apparel, or boot trades.  | Sub-contractors' premises subject to factory regulations. Occupier to keep records shewing places, description, and quality of work; nature and amount of remuneration paid. Out-workers must register. Sub-letting forbidden.   |
| <i>Meals in Workroom</i>                      | Minister may forbid while work is going on; he may require provision of a suitable eating-room.  | Forbidden while work going on, unless Chief Inspector permits. Forbidden if dangerous trade conducted.  | Minister may forbid meals being taken in factories; he may require provision of suitable eating room.  |
| <i>Sanitary Health and Safety Provisions</i>  | Factories to be clean, wholesome, and well ventilated. Over-crowding forbidden. Unhealthy persons under sixteen may be suspended from daily work. Avoidance of infection prescribed. Factories to be thoroughly cleaned once in fourteen months. Bakehouses and furniture factories not to be used as sleeping places. Seats to be provided for females. Proper necessary precautions to be taken against fire, and efficient fire escapes to be provided. | Factories to be clean, wholesome, and well ventilated. Over-crowding forbidden. Factories to be thoroughly cleaned once in fourteen months. Bakehouses to be washed once every six months. Factories and bakehouses not to be used as sleeping places. Wet spinners must be protected. Efficient fire escapes to be provided, and fire appliances kept ready. Doors, &c., to be kept free from obstruction. | Factories to be kept clean, wholesome, and well ventilated. Over-crowding forbidden. Suspension of work by unhealthy persons may be enforced. Avoidance of infection prescribed. Fresh drinking water to be provided. Factories to be thoroughly cleaned once in twelve months. Bakehouses not to be used as sleeping places. Seats to be provided for females. Proper necessary precautions to be taken against fire. |
| <i>Dangerous Machinery</i>                    | Must be fenced. Employment of women and boys forbidden at certain machines.  | Must be fenced. Employment of women and boys forbidden. First-aid ambulance-chest to be kept on premises.   | Must be fenced.*   |
| <i>Minimum Wage per week</i>                  | 4s. No premiums or bonus on behalf of apprentices is permitted.  | 2s. 6d. No premium is to be demanded from female apprentices and improvers in clothing trades, or any apprentice or improver employed in a shop.  | 5s. No premium is permitted from apprentices without permission of Inspector.  |

\* See Machinery and Scaffolding Act 1908.

## LEADING FEATURES OF ACTS IN FORCE IN AUSTRALIA, 1913.

8. *Mining Acts.*—Mining Acts regulate the working of mines. Generally the employment underground of all females and of boys under fourteen years is prohibited. A minimum age, usually seventeen, is fixed for employment as lander or braceman at plats and landing places; no lander, braceman, underground worker, or man in charge of motive power may be employed more than eight hours a day. A large number of scientific provisions for the protection of the lives and health of miners is also inserted in the Acts. Enginedrivers must hold certificates of competency. Persons may be licensed to certify to the condition of boilers. Provision is made to enable injured persons or the relatives of persons killed to recover damages if the injury or death results from a breach of the regulations referred to above. Inspection of mines is fully provided for. Sunday labour is forbidden. In New South Wales, and (since 1st February, 1910) Victoria still more advanced mining legislation exists; numerous sections are designed to ensure the well-being of the workers, such as limitation of hours, etc.

9. *Employers' Liability and Workmen's Compensation Acts.*—In each of the States the main provisions of the British *Employers' Liability Acts* have been enacted. Generally, they apply to all manual workers, though in Victoria miners, as coming under the Mines Acts, are excepted, and in South Australia and Western Australia domestic and menial workers are specifically included. The employers' liability exists in cases of defect of plant, etc., owing to negligence of employer or person in his service. Compensation is not allowed to exceed three years' earnings, and action against the employer is to be commenced within a reasonable time, notice of injury having previously been served. The provisions of the British *Workmen's Compensation Act* 1897 have also been copied in all the States. The Victorian Act, which has not yet been proclaimed, makes insurance obligatory. This legislation marks a distinct advance upon

the Employers' Liability Acts. Its application is generally to manual workers, though restriction is made in South Australia to those receiving less than £5 weekly, and in Tasmania the limit is £3, while miners are exempted from the operation of the Act in New South Wales, being provided for in the *Miners' Accident Relief Act 1900*. In Victoria non-manual workers earning more than £250 per annum are excluded. The liability of employers covers all cases of injury by accident during employment, and in South Australia and Victoria it extends also to disablement by industrial diseases. In certain circumstances persons employed casually otherwise than for the purposes of the employer's trade or business are excluded. Misconduct of employee exonerates the employer. Notice of accident is to be sent to the employer without delay, and proceedings for compensation must be begun within a reasonable time. In New South Wales, Queensland, and Western Australia the matter is settled by a police magistrate; in South Australia the Arbitration Court makes the award. The minimum amount of compensation in case of death is three years' earnings, or £200 (except in Tasmania, where the amount is £100, and South Australia, where it is £150), whichever is greater, up to a maximum of £300 in South Australia, £200 in Tasmania, and £400 in the other three States concerned. In case of incapacity the minimum compensation is half wages up to £1 a week in New South Wales, Queensland, and South Australia, up to £1 10s. in Tasmania and Victoria, and up to £2 in Western Australia; the maximum total payment is £500 in Victoria, £400 in Queensland, £300 in South Australia and Western Australia; and £200 in New South Wales and Tasmania. Agreements made by consent, may, under the authority of an official prescribed in the Act, vary its provisions. A lump sum may be accepted in lieu of weekly compensation, and compensation cannot be assigned. The main difference in the provisions of the two sets of enactments is that under the Liability Acts the employee had to show neglect or defect; under the Compensation Acts the employer has to shew misconduct of worker.

In Victoria, a penalty of £2 per uninsured worker and £1 per week thereafter is imposed for non-insurance. Insurance is to be effected in a recognised insurance office, or in the State Insurance Office, and any employer whose wage-roll for the previous twelve months did not exceed £160, shall be deemed to be insured with the Government Department, if the employer notifies the Commissioner within 14 days and obtains from him a policy of insurance as soon as practicable.

**10. Other Acts.**—Other legislation regulating conditions of labour has been enacted by the States. The British *Conspiracy and Protection of Property Act* (38 and 39 Vic., c. 86) has been adopted. Servants' registry offices are placed under administrative control, and the rates of commission chargeable are fixed by regulation. Power is given to workmen to attach moneys due to a contractor who employs them in order to satisfy a claim for wages, such wages being made a first charge on moneys due to a contractor. Workmen are given a lien for wages over material whereon they are working, even if it becomes part of other property. This is in addition to the common law lien, which ceases when possession of the property is parted with. Workmen's wages are protected from attachment. In Victoria, provision is made for the compulsory resumption of suburban lands to provide workmen's homes.

**11. General Results of Industrial Legislation.**—The results of the Legislation described must be sought in the Reports of the Inspectors of Factories of the several States. Generally speaking, the perusal of these reports and of the reports of Royal Commissions which have inquired into the working of the Acts, affords satisfactory evidence that the Acts have, on the whole, effected their objects.

### § 3. Legislative Regulation of Wages and Terms of Contract.

**1. General.**—Two systems, based upon different principles, exist in Australia for the regulation of wages and general terms of contracts of employment. A "Wages Board" system exists in Victoria and Tasmania, and an Industrial Arbitration Court in Western Australia. In the industrial legislation of New South Wales, Queensland, and South Australia both systems are embodied, Industrial or Wages Boards, as well as Industrial Courts, being instituted. In Victoria, Wages Boards' decisions may be reviewed by the Court of Industrial Appeals. In New South Wales, Industrial Arbitration Acts of 1901 and 1905 instituted an Arbitration Court. This court expired on 30th June, 1908, having delivered its last judgment on the previous day. Wages Boards were substituted under the Industrial Disputes Act 1908, and subsequent years; while the Act of 1912 introduced the mixed system. There is also the Arbitration Court of the Commonwealth, which has power, however, to deal only with matters extending beyond the limits of a single State.

The chief aims of the Wages Board system are to regulate hours, wages, and conditions of labour and employment, by the determination of a Board usually brought into existence for any specified industry or group of industries by petition or application. Under the Industrial Arbitration Court system an industry does not technically come under review until a dispute has actually arisen. Most of the Acts, however, have given the President of the Court power to summon a compulsory conference. In Victoria, where the Wages Board system is in force, there is no provision against strikes, but in Tasmania, where that system has also been adopted, penalties are provided for a lock-out or strike on account of any matter in respect of which a Board has made a determination.

**2. Wages Boards.**—(i.) *Historical.* This system was introduced in Victoria by the Factories and Shops Act of 1896. The original Bill made provision only for the regulation of the wages of women and children, but was afterwards amended in Parliament to extend the system to adult operatives of both sexes.

The Act of 1896 made provision for the regulation of wages only in the clothing and furniture trades and the bread-making and butchering trades. By an Act of 1900 the

operations of the Act were extended to include all persons employed either inside or outside a "factory" or "workroom"—see sec. 4, i. (a)—in any trade usually carried on therein. This section is now in the Act of 1912. The Act of 1907 extended the system to trades and businesses not connected in any way with factories, making provision for the appointment of Wages Boards for metropolitan shop employees, carters and drivers, persons employed in connection with buildings or quarrying, or the preparation of firewood for sale or the distribution of wood, coke, or coal. The Act of 1909 extended the system to the mining industry, and those of 1910 extended the operation of the Acts to shires.

The regulation is effected by a Board, called a Special Board, to distinguish it from the Board of Health. Boards for the regulation of wages in the trades specified in the Act of 1896 are appointed as a matter of course, and by the Executive other Boards are appointed only if a resolution for appointment be passed by both Houses of Parliament. Originally the Board was elected in the first instance, but the difficulty of compiling electoral rolls led to the adoption of the system of nomination, which has proved satisfactory. Beneficial results have followed from the institution of the system, conditions of female labour especially being improved. It is also claimed that sweating has been abolished.

The Board fixes the wages and hours of work and may limit the number of "improvers" to be employed (usually by prescribing so many to each journeyman employed). The Board fixes the wages of apprentices and improvers according to age, sex, and experience, and may fix a graduated scale of rates calculated on the same basis. Apprentices bound for less than three years are improvers, unless the Minister sanctions the shorter period of apprenticeship on account of previous experience in the trade. The Minister may sanction the employment of an improver over twenty-one years of age at a rate proportionate to his experience. Outworkers in the clothing trade must be paid piece rates. Manufacturers may, by leave of the Board, fix their own piece rates, if calculated upon the average wages of time workers as fixed by the Board.

Licenses for twelve months to work at a fixed rate lower than the minimum rate may be granted by the Chief Inspector of Factories to persons unable to obtain employment by reason of age, slowness, or infirmity. Licenses are renewable.

Penalties are fixed for the direct or indirect contravention of determinations, the obedience to which is ascertained by examination of the records of wages, etc.

A Court of Appeal has power to review determinations of the Boards.

The Acts fix an absolute weekly minimum wage, and the evasion of this provision (such as had occurred regarding females employed in the clothing trade), by charging an apprenticeship premium, is prevented by the prohibition of all such premiums. Until the Minimum Wage Act of 1908 began to operate, this absolute minimum provision did not exist in New South Wales. The Act of 1912 of this State combines the Wages Board and Arbitration Court systems.

South Australia enacted the Wages Board system in 1900, 1904, and 1906, but the first-mentioned Act was rendered inoperative owing to the disallowance by Parliament of the regulations necessary for carrying it into effect. The Act of 1904 revived the Wages Board system respecting women and children employed in clothing and white-work trades. The action of this statute was paralysed by a decision, the effect of which was to prevent the fixing of a graduated scale of wages as is done by the Victorian Boards. The necessity for some protection to the persons intended to be benefited by these statutes was urged in the annual reports of the Chief Inspector of Factories, but, until 1906, without effect. Many employers, however, voluntarily complied with the Board's determinations, though these were without legal force. The system was brought into full operation by the Act of 1906, which preceded the Victorian Act of 1907, in extending the system to other than factory trades, and was of a wider scope than the Victorian Act.

The system has also been in operation in New South Wales and Queensland, and came into operation in Tasmania during 1911. In Western Australia the object is attained under the Arbitration Court system.

In Queensland, the Wages Boards Acts were repealed in 1912, and replaced by the Industrial Peace Act, which, while embodying the principal provisions of the Wages Boards Acts, contains provisions for the establishment of an Industrial Court for appeals, and also provides against lockouts and strikes. Under this Act all Boards established under the repealed Acts continue in existence, and their determinations are recognised as awards under the new Act.

It is claimed that the introduction of the Wages Board system affording protection from unfair competition to employers, and the assurance of fair wages to employees, has led to improvement in working conditions, and that the appreciation of the workers is evidenced by the number of applications for the granting of Boards.

(ii.) *Mode of Constitution.* The following statement is taken from the Report of the Chief Inspector of Factories, Victoria, for 1911. The other States, in establishing their systems, adopted, in the main, that in vogue in Victoria.

"Before a Special Board is constituted, it is necessary that a resolution in favour of such a course should be carried in both Houses of the Legislature. It is usual for the Minister administering the Factories Act to move that such a resolution should be passed. He may be induced to adopt such a course by representations made either by employers or employees, or both, or by the reports of the officers of the Department. The reason alleged by employers for desiring a Board is usually unfair competition; those alleged by employees are low wages and the excessive employment of juvenile labour. If the Minister is satisfied that a case has been made out, he moves the necessary resolution in Parliament, and when such resolution has been carried, an Order-in-Council is passed constituting the Board. Once a resolution has been passed or a Board appointed, the Minister, through the Governor-in-Council, has full power to group or divide trades, to adjust the powers of different Boards by taking from one and adding to another, to define the parts of the State over which any determination shall operate, and generally to administer so as to secure the greatest measure of benefit. The Order constituting the Board indicates the number of members. The number of members must not be less than four nor more than ten. The Minister then invites, in the daily press, nominations for the requisite number of representatives of employers and employees. These representatives must be, or have been, employers or employees, as the case may be, actually engaged in the trade to be affected. The full names and addresses of persons willing to act should be sent in with particulars as to their connection with the trade during the three years last past. Where there are associations of employers or employees, more than the necessary number of nominations are often received. In such case, the Minister selects from the persons whose names are sent in, the necessary number to make up a full Board. The names of persons so nominated by the Minister are published in the *Government Gazette*, and unless within twenty-one days, one fifth of the employers, or one-fifth of the employees, as the case may be, forward a notice in writing to the Minister that they object to such nominations, the persons so nominated are appointed members of the Board by the Governor-in-Council. If one-fifth of the employers or employees object to the persons nominated by the Minister—and they must object to all the nominations, and not to individuals—an election is held. The Chief Inspector conducts such elections, the voting is by post, the ballot papers being forwarded to each elector. Within a few days of their appointment, the members are invited to meet in a room at the office of the Chief Inspector of Factories, and a person (always a Government officer, and usually an officer of the Chief Inspector's department) is appointed to act as secretary. The members must nominate a chairman within fourteen days of the date of their appointment, but if they cannot agree to a chairman, he is appointed by the Governor-in-Council. The times of meeting, the mode of carrying on business, and all procedure, are entirely in the hands of the Board, whose powers are defined in the Factories Acts. Vacancies in Special Boards are filled on the nomination of the Minister without any possibility of either employer or employee objecting. The result of the labours of a Board is called a 'Determination,' and each item of such determination must be carried by a majority of the Board. The chairman is a member of the Board. His function is

usually confined to conducting the proceedings. He does not exercise his vote except in cases where the Board is equally divided, when his casting vote determines the question at issue. When a determination has been finally made, it must be signed by the chairman, and forwarded to the Minister of Labour. The Board fixes a date on which the determination should come into force, but this date cannot be within thirty days of the last fixing of a price or rate of pay. If the Minister is satisfied that the determination is in form, and can be enforced, it is duly gazetted. In the event of the Minister considering that any determination may cause injury to trade, or injustice in any way whatever, he may suspend same for any period, not exceeding six months, and the Board is then required to reconsider the determination. If the Board does not make any alteration, and is satisfied that the fears are groundless, the suspension may be removed by notice in the *Gazette*. Provision is made by which either employers or employees may appeal to the Court of Industrial Appeals against any determination of a Board. This Court consists of any one of the judges of the Supreme Court, sitting alone, and the judges arrange which of them shall for the time being constitute the Court. An appeal may be lodged (a) by a majority of the representatives of the employers on the Special Board; (b) a majority of the representatives of employees on the Special Board; (c) any employer or group of employers, who employ not less than 25 per cent. of the total number of workers in the trade to be affected; or, (d) 25 per cent. of the workers in any trade. The Court has all the powers of a Special Board, and may alter or amend the determination in any way it thinks fit. The decision of the Court is final, and cannot be altered by the Board, except with the permission of the Court, but the Court may, at any time, review its own decision. The Minister has power to refer any determination of a Board to the Court for its consideration, if he thinks fit, without appeal by either employer or employee. The decision of the Court is gazetted in the same way as the determination of the Board, and comes into force at any date the Court may fix. The determinations of the Board and the Court are enforced by the Factories and Shops Department, and severe penalties are provided for breaches of determinations. No prosecution for any offence against any of the Factories Acts, or for any breach of any determination can be brought except through the Department."

(iii.) *Special Minimum Wage Provisions.* At the end of 1908 the Minimum Wage Act was passed in New South Wales. Its provisions are now incorporated in the Factories and Shops Act 1912. A summary of the provisions of the enactment, and a statement of some of the ills it was intended to meet, as set out in the departmental reports, serve as an indication of the general trend of public feeling throughout the Commonwealth in regard to the payment of a satisfactory wage to employees. The Act provided for a weekly wage of not less than four shillings to all persons coming within the definition of "workman" or "shop assistant." That such a measure was necessary was evidenced by the fact that in the workrooms in the Sydney district no less than 514 girls, whose ages ranged from 13 to 21 years, were, at the end of 1908, in receipt of less than four shillings per week, and in the Newcastle district there were 272 girls employed in the dressmaking and millinery workrooms receiving less than four shillings a week, the majority being paid no wages at all for their services. The Act provided that for "workmen" or "shop assistants" a minimum rate of threepence per hour or portion of an hour was to be paid when overtime was worked, such payment to be made at intervals of not more than one month, and a sum of not less than sixpence as tea-money was to be paid on the day the overtime was worked. The payment by employees, or on their behalf, in the clothing and wearing apparel trades, of a premium or bonus was prohibited. The system of so-called apprenticeship without payment originally carried with it the recognition of an obligation to teach the trade, especially in the dressmaking and millinery industry. This aspect of the case had, to a very great extent, been forgotten in the large workrooms, the training received for some time being more that of general discipline than of a technical character. With a minimum wage of four shillings, an employer would find it worth while to teach the employees, so as to bring in a return for the outlay as speedily as possible, and

discharges of partially-trained workers would be less frequent. The trades would be improved by the weeding out of those who failed to show reasonable aptitude for their work.

**3. The Arbitration Court System.**—(i.) *Acts in Force.* The following is a general account of the main features of the Compulsory Arbitration laws of Australia. A few important divergencies between the Acts are noted.

The Acts in force in the States at the close of the year 1913 are set out on page 908 *supra*. In addition, the Commonwealth Statute Book contains the Commonwealth Conciliation and Arbitration Acts 1904-11.

(ii.) *Significance of Acts.* In Victoria in 1891, and in New South Wales in 1892, Acts were passed providing for the appointment of Boards of Conciliation, to which application might be made voluntarily by the contending parties. The awards of the Boards had not any binding force. Boards were applied for on but few occasions, their lack of power to enforce awards rendering them useless for the settlement of disputes.

The first Australian Act whereby one party could be summoned before, and, presumably, made subject as in proceedings of an ordinary court of law to the order of a court, was the South Australian Act of 1894. Its principles have been largely followed in other States, but it proved abortive in operation in its own State, and in many respects was superseded by the Wages Board system. Western Australia passed an Act in 1900, repealed and re-enacted with amendments in 1902 and 1909, the whole being consolidated in the Industrial Arbitration Act of 1912. The Court system was adopted in New South Wales in 1901, and various changes having been subsequently introduced, a consolidation was made in 1912. Queensland introduced the system under the Industrial Peace Act of 1912: The Commonwealth principal Act, passed in 1904, applies only to industrial disputes extending beyond the limits of a single State. In Western Australia a Court of Arbitration is constituted under the presidency of a Judge of the Supreme Court.

(iii.) *Industrial Unions.* The Arbitration Act, framed to encourage a system of collective bargaining, to facilitate applications to the court, and to assure to the worker such benefits as may be derived from organisation, virtually creates the Industrial Union. This, except in New South Wales and Western Australia, has been quite distinct from the trades union; it is not a voluntary association, but rather an organisation necessary for the administration of the law. The New South Wales Act of 1901 required all trade associations to register as "industrial unions," prescribing the separation of industrial and benefit funds, and enforcing strict and proper management, the industrial funds being available in payment of penalties incurred for breaches of the Arbitration Act. Industrial unions (or "organisations" as they are styled in the Commonwealth Act) may be formed by employers or employees. They must be registered, and must file annual returns of membership and funds. Before unions of employers are registered, there must be in their employment a minimum number of employees. In New South Wales and Western Australia the minimum is 50; under the Commonwealth Act, 100. Unions of employees must, in Western Australia, have a membership of 15; by the Commonwealth Act a membership of 100 is required. The union rules must contain provisions for the direction of business, and, in particular, for regulating the method of making applications or agreements authorised by the Acts. In Western Australia rules must be inserted prohibiting the election to the union of men who are not employers or workers in the trade, and the use of union funds for the support of strikes and lockouts; a rule must also be inserted requiring the unions to make use of the Act.

(iv.) *Industrial Agreements.* Employers and employees may settle disputes and conditions of labour by industrial agreements, which are registered and have the force of

awards. They are enforceable against the parties and such other organisations and persons as signify their intention to be bound by an agreement.

(v.) *Powers of Court.* Failing agreement, disputes are settled by reference to the court. In the Commonwealth this consists of a Judge of the High Court. The court may (and on the application of an original party to the dispute must) appoint two assessors at any stage of the dispute. In the States the president of the tribunal (usually a Judge of the Supreme Court) is assisted by members (the number varying under the various Acts) chosen by and appointed to represent the employers and employees respectively.

Cases are brought before the court either by employers or employees. The consent of a majority of a union voting at a specially summoned meeting is necessary to the institution of a case; the Commonwealth Act requires the certificate of the registrar that it is a proper case for consideration.

The powers of the court are both numerous and varied; it hears and makes awards upon all matters concerning employers and employees. The breadth of its jurisdiction may be gathered from the Commonwealth definition of "industrial matters," viz., "all matters relating to work, pay, wages, reward, hours, privileges, rights, or duties of employers or employees, or the mode, terms, and conditions of employment or non-employment; and in particular, but without limiting the general scope of this definition, the term includes all matters pertaining to the relations of employers and employees, and the employment, preferential employment, dismissal or non-employment of any particular persons, or of persons of any particular sex or age, or being or not being members of any organisation, association, or body; and any claim arising under an industrial agreement; and all questions of what is fair and right in relation to any industrial matter having regard to the interests of persons immediately concerned, and of society as a whole."

The object of the court is to endeavour to prevent and settle industrial disputes; and when they have occurred to reconcile the parties. The court may fix and enforce penalties for breaches of awards, restrain contraventions of the Acts, and exercise all the usual powers of a court of law. The High Court has declared that the power of the Commonwealth Arbitration Court to make a common rule, *i.e.*, an extension of award in a particular case to cover the whole industry affected by the proceedings, is *ultra vires* of the Constitution.<sup>1</sup>

The Commonwealth court may prescribe a minimum rate of wage; it may also, as regards employment, direct that preference of employment or service shall be given to members of unions. An opportunity is offered for objection to a preference order, and the court must be satisfied that preference is desired by a majority of the persons affected by the award who have interests in common with the applicants.

The Commonwealth Court is to bring about an amicable agreement, if possible to conciliate and not to arbitrate, and such agreement may be made an award. In order to prevent a matter coming into dispute the president of the Commonwealth Arbitration Court may convene a compulsory conference under his own presidency. Attendance of persons summoned to attend is compulsory. Provision is made in the recent Act, whereby, if there is no settlement arrived at in the conference, the president may refer the matter to the court and then arbitrate on it.

There are four ways in which a matter may be brought before the court—

- (a) By the registrar certifying that it is a dispute proper to be dealt with by the court in the public interest.
- (b) By the parties, or one of them, submitting the dispute to the court by plaint in the prescribed manner.
- (c) By a State Industrial Authority, or the Governor-in-Council of a State in which there is no such authority, requesting the court to adjudicate.
- (d) By the president referring to the court a dispute as to which he has held a conference without an agreement being reached.

---

1. *The King v. The Commonwealth Court ex parte Whybrow.* (2 C.L.R., vol. 2, p. 1.)

All parties represented are bound by the award, and also all parties within the ambit of a common rule. The court possesses full powers for enforcement of awards.

States have included their railway and tramway employees, and also the employees of certain other public bodies under the Acts; the section of the Commonwealth Act giving the Commonwealth Court power over state employees has been declared unconstitutional by the High Court.<sup>1</sup>

(vi.) *Repression of Strikes and Lockouts.* The first instance of a strike on a large scale in Australia occurred in 1890 and 1891, when the industrial upheavals assumed far-reaching proportions. As a result of differences between pastoralists and shearers, the labour unions called out the maritime workers. Industry was paralysed by the cessation of the sea-borne coal trade. Communications were held up, and commercial activity suspended. The chief results of the strike were indirect. It was seen that peaceful methods of adjusting disputes were more conducive to the welfare of the community generally, than the suicidal methods of strike and lockout. The unions therefore turned to legislation as an effectual means of improving labour conditions. It was hoped that open hostility to the economic system might be prevented by State regulation. A general desire was shewn for recognition of conciliation and arbitration, voluntary where possible, but compulsory, through national tribunals and under legal authority, where necessary.

Accordingly, industrial legislation aims at preventing strikes and lockouts in relation to industrial disputes, other means of settlement being provided. Such is the declared object of the Commonwealth Acts. It is decreed that no person or organisation shall, on account of any industrial dispute, do anything in the nature of a strike or lockout, or continue any strike or lockout, under a penalty of £1000.

Strikes, however, have not altogether ceased, even in those States where legislation, by stringent enactment, forbids them. It has been noted that strikes of late have occurred chiefly amongst coal miners and certain unions representing unskilled labourers. The prohibiting clauses have not always been enforced by the Executive. But in several instances indictment has followed attempts to bring about or to prolong a strike, and fines and imprisonment have been awarded. A decision of the Arbitration Court, ordering the Newcastle coal trimmers to return to work, was upset by the Supreme Court of New South Wales, on the ground that the Arbitration Court had no power to make men work if they did not wish to do so.

(vii.) *Miscellaneous.* Protection is afforded to officers and members of unions against dismissal merely on account of such officership or membership, or on account of their being entitled to the benefit of an award.

It has been settled by the High Court that an Arbitration Court cannot direct—

- (a) That non-unionists seeking employment shall, as a condition of obtaining it, agree to join a union within a specified time after engagement;
- (b) That an employer requiring labour shall, *ceteris paribus*, notify the secretary of the employees' union of the labour required.<sup>2</sup>

**4. Comparative Statement of Tribunals for Regulating Wages in Australia.**—The table on pages 928 and 929 shews at a glance the Acts which operate in fixing wages, the constitution and function of tribunals enacted under them, and the effect and extent of the tribunals' decisions. It will be seen that in all the States there is machinery for the regulation of wages.

1. Federated Amalgamated Railway, etc., Employees v. N.S.W. Railway, etc., Employees. (4 C.L.R. 488).

2. Trolly, etc., Union of Sydney and Suburbs v. Master Carriers' Association of New South Wales. (2 C.L.R. 509.)

**5. Movement Towards Uniformity.**—The wide difference between the development in the several States of the Commonwealth of the regulation by State institutions of the remuneration and conditions of the workers, has given rise to a desire on the part of the Commonwealth Government to secure uniformity throughout Australia by any suitable and constitutional action on the part of the Commonwealth. The provisions of States wages laws vary considerably. In New South Wales, Victoria, and Western Australia, considerable experience has been gained of their working. The system is newer in South Australia, Queensland, and Tasmania. The desirability of uniformity has, as already mentioned, been recognised by the New South Wales Arbitration Court, which refused the Bootmakers' Union an award which would increase the wages of its members to amounts exceeding those paid in Victoria in the same trade, the express ground of the refusal being that New South Wales manufacturers would be handicapped by the payment of a higher rate of wage than that prevailing in Victoria.

**6. Constitution Alteration Proposals.**—Two proposed laws for the alteration of the constitutional powers of the Commonwealth in regard to industries and businesses were submitted to the people for acceptance or rejection on the 26th April, 1911. The first law proposed to amend section 51 of the Constitution Act (see pp. 24 and 25 hereinbefore) so as to give the Commonwealth Government increased powers to deal with (a) trade and commerce, (b) corporations, (c) industrial matters, and (d) trusts and monopolies. The second law proposed to insert after section 51 of the Constitution Act, a section empowering the Commonwealth Government to make laws with respect to monopolies. Neither of the proposals was approved by the people. Fuller particulars are given on page 24 of this book. At the general elections, held on 31st May, 1913, these and other matters were again submitted by referendum and again rejected.

**7. The "New Protection."**—The opinion has been expressed that a manufacturer who benefits by the Commonwealth protective tariff should charge a reasonable price for the goods which he manufactures, and should institute a fair and reasonable rate of wage and conditions of labour for his workmen.

The above view is known as the "New Protection," a phrase which, though novel, is already firmly established in Australian economic discussions. The outcome has been the enactment of new laws, designed for the benefit of the workers, and for controlling monopolies and trusts which would otherwise exploit the necessities of life.

By the Customs Tariff 1906, increased duties were imposed upon certain classes of agricultural machinery, notably the "stripper-harvester," a machine invented in Australia, which has, to a great extent, replaced the "reaper and binder and thrashing machine" in the harvesting of wheat. By the same Act it was enacted that the machines scheduled should not be sold at a higher cash price than was thereby fixed, and that if that price should be exceeded, the Commonwealth Executive should have power, by reducing the customs duties imposed by the Act, to withdraw the tariff protection.

By the Excise Tariff Act 1906 (No. 16 of 1906), an excise of one-half the duty payable upon imported agricultural machinery was imposed upon similar machinery manufactured in Australia. But it was provided that the latter should be exempt from excise if the manufacturer thereof complied with the following condition, namely, that the goods be manufactured under conditions as to the remuneration of labour, which—

- (a) Are declared by resolution of both Houses of the Commonwealth Parliament to be fair and reasonable ;
- (b) Are in accordance with the terms of an industrial award under the Commonwealth Conciliation and Arbitration Act 1904 ;
- (c) Are in accordance with the terms of an industrial agreement filed under the last-mentioned Act ;
- (d) Are, on an application made for the purpose to the President of the Court, declared to be fair and reasonable by him or by a judge of a State Court or a State industrial authority to whom he may refer the matter.

## TRIBUNALS FOR THE REGULATION OF WAGES

| <i>Particulars.</i>                                      | NEW SOUTH WALES.  | VICTORIA.  | QUEENSLAND.  |
|--|---|--|--|
| <i>Name of Acts</i>                                      | Industrial Arbitration Act 1912   | Factories and Shops Act 1912   | Industrial Peace Act 1912  |
| <i>Nature of Tribunals</i>                               | Court of Industrial Arbitration. Industrial Boards  | Court of Industrial Appeals. Wages Boards  | Industrial Court. Industrial Boards  |
| <i>How Tribunals are brought into existence</i>          | Industrial Court (Judge) constituted by Act. Industrial Boards by the Minister on recommendation of Industrial Court. | Court constituted by Acts. Wages Boards by Governor-in-Council on resolution of Parliament                     | Industrial Court constituted by the Act. Industrial Boards, by Governor-in-Council on recommendation of Court  |
| <i>Scope of Acts</i>                                     | To industrial groups named in Schedule to Act, and those added by Proclamation. Includes Government servants          | To any process, trade, business, or occupation specified in a resolution. Government servants are not included | To callings specified in Schedule to Act, and to those added by Governor-in-Council  |
| <i>How a trade is brought under review</i>               | Reference by Court or Minister, or by application to the Board by employers or employees                              | Usually by petition to Minister  | By petitions and representations to Industrial Registrar   |
| <i>President or Chairman of Tribunal</i>                 | Appointed by Minister on recommendation of Court.   | Appointed by Governor-in-Council on nomination of Board, or failing that on nomination by Minister             | Any person elected by Board. If none elected, appointment is by the Governor-in-Council on recommendation of Court   |
| <i>No. of Members of Tribunal</i>                        | Chairman, and 2 or 4 other members  | Not exceeding 11 (including chairman)  | Not less than 5 nor more than 13 (including chairman)  |
| <i>How ordinary members are appointed</i>                | Appointed by Minister on recommendation of Industrial Court   | Nominated by Minister. But if one-fifth of employers or employees object, representatives are elected by them  | By employers and employees respectively  |
| <i>Decisions — how enforced</i>                          | By Registrar and Industrial Magistrate  | By Factories Department in Courts of Petty Sessions  | By Inspectors of Factories and Shops, Department of Labour   |
| <i>Duration of decision</i>                              | For period fixed by Tribunal, but not more than 3 years.  | Until altered by Board or Court of Industrial Appeals  | 12 months and thereafter, until altered by Board or Court  |
| <i>Appeal against decision</i>                           | To Industrial Court against decision of Boards, except those Boards presided over by a Judge                          | To the Court of Industrial Appeals   | To Industrial Court  |
| <i>If suspension of decision possible pending appeal</i> | No; except by temporary variation of award by the Court   | Yes; for not more than 12 months   | Yes; for not more than 3 months  |
| <i>Can preference to unionists be declared?</i>          | Yes   | No   | No   |
| <i>Provision against strikes and lockouts</i>            | Strikes, penalty £50 and preference to unionists cancelled. Lockouts, penalty £1000.                                  | None   | Strikes £50, lockouts £1000, unless notice of intention given to Registrar and secret ballot taken in favor. In the case of public utilities, compulsory conference also must have proved abortive |
| <i>Special provisions for Conciliation</i>               | Special Commissioner. 3 Conciliation Committees for colliery districts. Registered agreements                         | None   | Compulsory Conference. Registered Agreements   |

## IN TRADES IN AUSTRALIA, 1913.

| SOUTH AUSTRALIA.  | WESTERN AUSTRALIA.  | TASMANIA.  | COMMONWEALTH.   |
|---|---|--|---|
| The Factories Acts 1907, 1908, and 1910. Industrial Arbitration Act 1912  | Industrial Arbitration Act 1912   | Wages Boards Acts 1910 and 1911  | Conciliation and Arbitration Act 1904-11.   |
| Industrial Court. Wages Boards  | Arbitration Court   | Unlimited  | Court of Conciliation and Arbitration.  |
| Court constituted by Act of 1912. Wages Boards by the Governor-in-Council   | Constituted by the Act  | For the clothing trade, by the Act; for other trades, by a resolution of Parliament      | Court of Record constituted by the Act  |
| To processes, trades, &c., specified in Act, and such others as may be authorised by Parliament   | All industrial occupations  | All trades, or groups or parts thereof   | Industrial disputes extending beyond limits of any one State or in Federal Capital or Northern Territories  |
| Court—matters or disputes submitted by Minister, Registrar, employers or employees, or by report of Wages Board. Wages Boards by petitions, &c. | Industrial disputes referred by President or by an Industrial Union or Association  | By application of parties  | Industrial disputes either certified by Registrar, submitted by organisation, referred by a State Industrial authority or by President after holding abortive Compulsory Conference |
| Court—President. Wages Board, appointed by Governor on nomination of Board, or failing nomination a Stipendiary Magistrate                      | A Judge of the Supreme Court  | Any person elected by the Board. If none elected, appointment by the Governor-in-Council | President   |
| Court, President only. Wages Board, not less than 5 nor more than 11 (inclusive of chairman)  | Three, including president  | Chairman, and not less than four nor more than ten                                       | President only  |
| By Governor on nomination of employers and employees respectively   | Appointed by Governor, President directly, and one each on recommendation of unions of employers and workers respectively       | By Governor-in-Council on nomination by employers and employees                          | President appointed by Governor - General from Justices of High Court for a term of 7 years.  |
| By Factories Department   | By Arbitration Court on complaint of any party to the award or Registrar or an Industrial Inspector                             | By Department of Public Health   | By proceedings instituted by Registrar, or by any organisation affected, or a member thereof  |
| Until altered by Board or by order of Industrial Court  | For period fixed by Court, not exceeding 3 years, or for 1 year and thenceforward from year to year until 30 days' notice given | Until altered by Board.  | For period fixed by award not exceeding 5 years   |
| Industrial Court  | No appeal except against imprisonment or a fine exceeding £20   | To Supreme Court   | No appeal. Case may be stated by President for opinion of High Court  |
| Yes   | No suspension. Court has power to revise an award after the expiration of 12 months from its date                               | Yes  | No appeal   |
| No  | No  | No   | Yes; ordinarily optional, but mandatory if in opinion of Court preference is necessary for maintenance of industrial peace or welfare of society                                    |
| Penalty £500, or imprisonment 3 months  | Employer or Industrial Union, £100; other cases, £10.   | Organisations, £500; individuals, £20  | Penalty, £1000.   |
| Compulsory Conference. Industrial Court. Registered agreements  | Compulsory Conference. Registered agreements  | None   | Compulsory Conference. Court may temporarily refer to Conciliation Committee. Registered agreements   |

By the Excise Tariff Act 1906 (No. 20 of 1906) excise duties are imposed in respect of spirits, and it is provided that if any distiller (i.) does not, after the Act has been passed a year, pay his employees a fair and reasonable rate of wages per week of forty-eight hours or (ii.) employs more than a due proportion of boys to men engaged in the industry, the Executive may on the advice of Parliament impose an additional duty of one shilling per gallon on spirits distilled by that distiller.

Exemptions have been claimed by the manufacturers of agricultural machinery in South Australia, New South Wales, Victoria, and Tasmania. These were granted in the two first-mentioned States in consequence of an agreement entered into between the employers and employees. In Victoria, "this whole controversial problem with its grave social and economic bearings" (to quote the words of the President of the Court) was discussed in a lengthy case upon the application for exemption by Victorian manufacturers, now widely known as the "Harvester Case," and in the report of that case may be found the legal interpretation of the Acts under consideration. The exemptions claimed were refused, and the court after discussing the meaning of the words "fair and reasonable" defined them by laying down what it considered to be a scale of fair and reasonable wages.

The High Court has pronounced that the legislation under these Excise Acts is unconstitutional as being an extension of Federal action beyond the powers granted, and a usurpation of the ground reserved to the States. It may be noted that the rejected measures were enacted with the consent of all parties in Parliament, having been placed upon the Statute Book whilst the Liberal party was in power, the Labour representatives strongly supporting the proposals.

**8. Bounties.**—The Bounties Act 1907, the Manufactures Encouragement Act 1908, and the Shale Oil Bounties Act 1910 make provision for the encouragement of certain Australian industries by the payment to producers of certain moneys allotted by the Act upon the production of the commodities specified. The Acts also provide for the refusal or reduction of a bounty, if the production of a commodity is not accompanied by the payment to the workers employed in that production of a fair and reasonable rate of wage. The amounts paid in bounties during 1912-13 were :—

#### COMMONWEALTH BOUNTIES PAID (EXCLUDING SUGAR), 1912-13.

| Cotton. | Flax and Hemp. | Sisal Hemp. | Preserved Fish. | Tobacco Leaf. | Cotton Seed for Manufacture of Oil.* | Coffee, Raw. | Fruits, Dried. | Combed Wool or Tops Exported. | Iron Manufactures etc.† | Wire Netting.† | Kerosene.‡ | Refined Paraffin Wax.‡ | Total.   |
|---------|----------------|-------------|-----------------|---------------|--------------------------------------|--------------|----------------|-------------------------------|-------------------------|----------------|------------|------------------------|----------|
| £ 95    | £ 215          | £ ..        | £ 103           | £ 215         | £ 22                                 | £ 125        | £ 576          | £ 13,061                      | £ 16,987                | £ 1,110        | £ 2,792    | £ 967                  | £ 36,268 |

\* Cotton seed oil, £13; linseed oil, £9.      † Paid under the Manufactures Encouragement Act 1908.  
    ‡ Paid under the Shale Oil Bounties Act 1910.

The provision of bounties for sugar-growers is dealt with on page 394 *supra*. The present operative Act is the Sugar Bounty Act 1910, in the terms of which the grower receives bounty according to his production of sugar-cane and beet grown by white labour. The bounties and expenses for the last eight years were :—

## SUGAR BOUNTIES AND EXPENSES, 1905-6 to 1912-13.

## § 4. Operations under the Wage-regulating Laws.

1. **Awards and Determinations of Industrial Tribunals.**—The grounds usually alleged by the employers in seeking awards or determinations are that their business is hampered by "unfair" competitors, who pay only a sweating wage; employees allege that they are sweated, or are entitled to an increase in their wages by reason of the prosperity of the trade in which they are engaged, or increase in the cost of living.

In New South Wales there were at 31st December, 1913, 207 Industrial Boards in existence. Awards of Boards and of the Court in force numbered 286, of which 65 were awards of the Industrial Court varying previous awards of Boards. It should be observed, that of these 286 awards there were 35 (under the Act of 1908) which had expired before the end of the year 1913, though they have been reviewed since that date by Boards under the 1912 Act. It is understood, however, that in the interim the wages, hours, and conditions of these awards were observed.

In Victoria there were at 31st December, 1913, 131 Wages Boards constituted, affecting about 150,000 employees. The number of determinations in force was 127. All the Boards authorised, with the exception of three, had met for the purpose of fixing wages, hours, etc.

The Court of Appeal in Victoria had heard twelve appeals from determinations of Wages Boards. In one case the decision was upheld; in ten cases decisions were reversed or amended; in one case the Board, unable to come to a determination, referred the matter to the Court, which exercised its power of fixing a proper wage where the average wage paid by employers did not afford a living wage. Of these decisions five were in force at 31st December, 1913, the others having been superseded by amended determinations. The Court also heard an appeal for a modification of its determination with respect to a trade, and decided to modify such determination by reducing the working hours and increasing the wages in certain cases.

The number of Wages Boards appointed in Queensland since the Acts came into force was, at 31st December, 1913, 74. The employees affected numbered upwards of 30,000. In 73 cases determinations were in force, but four had been varied on appeal to the Industrial Court. Under the Industrial Peace Act 1912, all Boards established continued in existence, and their determinations were recognised. In South Australia there were, at the end of 1913, 56 trades under Boards, with about 25,000 employees. Fifty-four determinations were in force, including six made by the Industrial Court, in lieu of Wages Boards, on the Minister for Industry reporting the inability to appoint Boards as authorised, or the failure of the constituted Boards to discharge the duties required under their appointment. In Western Australia awards have been made for 36 Industrial Unions, but only 18 remained in force at 31st December, 1913, 19 expired between 4th December, 1912, and the end of 1913, and had not been reviewed by the Court at the latter date. The Wages Board system was inaugurated in Tasmania in 1911. Up to 31st December, 1913, resolutions authorising the appointment of 23 Boards were carried in Parliament, and 19 Boards had made determinations. Two other Boards had commenced work, but had not issued their determinations, and two remained to be constituted. The number of Commonwealth Conciliation and Arbitration Court Awards in force at 31st December, 1913, was 17.

The following tabular statement gives particulars of operations under the various Acts up to the end of the year 1913 :—

**BOARDS AUTHORISED AND CONSTITUTED, AWARDS, DETERMINATIONS AND AGREEMENTS IN FORCE, 31st DECEMBER, 1913.**

| Particulars.   | C'with. | N.S.W. | Vic. | Q'ld. | S.A. | W.A. | Tas. | Total |
|--|---------|--------|------|-------|------|------|------|-------|
| <b>1. Boards Authorised, Constituted, and in Force—</b>                |         |        |      |       |      |      |      |       |

\* Excluding two Special Demarcation Boards. † Boards constituted and subsequently dissolved or superseded. In New South Wales 16 Boards were dissolved owing to alteration in the sectional arrangement of industries and callings. In Victoria one Board was superseded by three Boards. ‡ Including 65 awards of Boards which were varied by awards of Court.

The total number of Boards authorised in the five States in which the Board system is in force was 504, the total number constituted being 501, of which 17 had been dissolved or superseded. The number of Boards in existence at the end of 1913 was accordingly 484, of which 387 had either made original awards or determinations or varied existing awards or determinations, and 97 had not made any award or determination. The difference between the number of Boards in existence and the number which had made awards or determinations, is accounted for mainly by the fact that in New South Wales a number of Boards constituted under the Act of 1912 had not made awards, owing to existing awards, made under the Act of 1908, being still in force. This is shewn in the following line (Number of Awards and Determinations in force) in which it may be seen that the total number in force (including awards made by the Commonwealth and Western Australian Arbitration Courts) was 596. In New South Wales, the number of awards in force includes 146 awards under the Act of 1908. This leaves 138 awards in force made by 123 Boards under the new Act. In explanation of the fact that the number of awards in force in this State under the new Act exceeds the number of Boards in existence, it may be mentioned that several of the Boards have made separate awards for different districts and branches of industry.

Of the total number of awards and determinations in force on the 31st December, 1913, 82 were the result of awards made by Industrial Courts (either in original or appellate jurisdiction), in addition to the 17 Commonwealth and 18 Western Australian awards.

The following four lines in the table shew the territorial scope of the State awards and determinations in force at the end of the year 1913. It will be seen that 58 apply to the whole of a State, 174 to one of the metropolitan areas, 161 to metropolitan and country towns, while the remaining 186 apply to country areas only.

Of the Commonwealth awards there are seven in connection with the shipping industry and the award affecting postal electricians, which apply to each of the six States. There are four awards which apply to five States, two which apply to four States, one to three States, and two to two States.

The total number of industrial agreements in force (including agreements under section 24 of the Commonwealth Conciliation and Arbitration Act, and under section 7 of the Queensland Industrial Peace Act) was 401. The last line of the table shews the number of Commonwealth agreements operating in each State. The total number of awards, determinations and agreements in force under the various Acts at the end of 1913 was 997, comprising 596 awards and determinations and 401 agreements.

The total number of individual awards and determinations which came into force during 1913 was 270 (264 State and 6 Commonwealth). The number of industrial agreements registered \*during that year was 165 (56 State and 109 Commonwealth),\* making a total for the Commonwealth of 435 awards, determinations and agreements, affecting wages, hours, or other conditions, which came into force in 1913. This constitutes no less than 44 per cent. of the total number (997) of awards, determinations and agreements in force at the end of 1913.

**2. Effect of Acts.**—The question whether the operation of the Acts has bettered the monetary position of the operative may be answered in the affirmative. Starting from the lowest point, the provision of an absolute minimum wage per week has stopped one form of gross sweating. Another case is that of the "white-workers" and dressmakers; with these the lowest grade was the "outworkers," who were pieceworkers. In some branches of the Victorian trade, in 1897, the wages paid to outworkers for all classes of certain goods were only from one-third to one-half the wages paid in the factories for low-class production of the same line of stuff. By working very long hours the outworker could earn ten shillings per week. The average wage of females in the clothing trade in 1897 was ten shillings and tenpence per week; there were, however, in that year 4164 females receiving less than one pound per week, and their average was eight shillings and eightpence. It was almost a revolution when a minimum wage of sixteen shillings per week of forty-eight hours was fixed by the Board, when pieceworkers' rates were fixed to ensure a similar minimum, and when outworkers were placed on the level of pieceworkers. Many employers refused to continue to give out work and took the workers into the factories on time work. The Wages Boards have since fixed the minimum wage per week in the industries mentioned to be—dressmakers 21s. 6d., shirtworkers 22s. 6d., and underclothing makers 20s. As a result, it has been found by a special investigation made in November, 1912, in regard to wages in manufacturing industries, that the average wages for all female workers in Victoria engaged at dressmaking and millinery was 17s. 11d., and for shirtworkers, whiteworkers underclothing), etc., 19s. 1d.

---

\* Including agreements under section 24 of the Commonwealth Conciliation and Arbitration Act and under section 7 of the Queensland Industrial Peace Act 1912.

## SECTION XXVIII.

## DEFENCE.

## 1. Military Defence.

**1. Development of State Military Systems.**—Prior to 1870, the main defence of Australia was entrusted to small garrisons of British troops quartered in the leading cities, whose primary purpose was to serve as a convict guard. From time to time, rumours of wars and of attacks upon Australia deemed imminent as a result of European entanglements, caused the raising of local companies and batteries, which were generally disbanded upon the cessation of hostilities or the quietening of the rumours. The first of such bodies was the "Loyal Association" formed in 1801 as a volunteer corps, on account of the Napoleonic wars, and at the express invitation of the Governor. Half a century later, and at other later dates, fear of Russian aggression drove the colonists to measures of self-defence. Efforts to permanently establish a defence force, however, failed until 1870. In that year, the withdrawal of the last Imperial regiment from Australia, and the sense of insecurity which the Continental wars had engendered, resulted in a definite basis for colonial defence being settled. Small detachments of permanent soldiery were established to act generally as a nucleus about which the citizen soldiery should be shaped, and, generally, to look after the forts and defence works, which had then begun to be erected. The system rested upon a volunteer basis, training and service being freely and enthusiastically given by the citizens, the Governments supplying arms and accoutrements and sometimes uniforms. Reward for five years' service frequently took the shape of grants of land. About 1880, Imperial experts advised the substitution of the purely volunteer system by a "militia" or partially-paid system. The provision of a small annual allowance, generally £10 or £12 per annum for the gunner or private, with a sliding scale for higher ranks, together with arms, accoutrements, ammunition, and all military necessities free, enabled the "militia" system to be introduced about 1883-4. The expenditure was thereby increased, but it was held that the efficiency was enormously greater. With reductions in the rates of pay the system has remained to the present day. "Volunteer" corps have again been raised, and the "permanent" forces from time to time augmented. A detailed historical account of the Australian defence forces prior to federation will be found in the Commonwealth Year Book, No. 2, pp. 1075-1080.

The strength of the military forces of the several States prior to federation, was generally nearly up to establishments. On 31st December, 1900 (the eve of federation), it was:—New South Wales, 9338; Victoria, 6335; Queensland, 4028; South Australia, 2932; Western Australia, 2696; Tasmania, 2024; total for Commonwealth, 27,353. Cadets, reservists, and rifle club members are excluded.

**2. Development of Commonwealth System from 1901 to 1913.**—(i.) *Administration.* Under the terms of the Constitution Act 1900, the Commonwealth took over control of defence matters in March, 1901. For four years from that date the land forces were administered by a general officer commanding, under the ministerial headship of the Minister for Defence. Early in 1905, a Council of Defence (since enlarged) was constituted to deal with questions of policy; also a Military Board, to supervise the administration of the forces. The principal aims in view were:—(i.) continuity of policy and administrative methods; (ii.) effectual parliamentary responsibility; (iii.) continuous inspection by an independent officer, the Inspector-General; (iv.) development of an

efficient citizen force; (v.) decentralization of authority by developing the independence of district commands. The Commonwealth has been divided into six military districts, roughly coterminous with boundaries of the States.

The citizen soldiery, or militia, makes up the main portion of the land forces of the Commonwealth. For administration at central and district headquarters, and for instruction of the citizen forces, and assistance in the administration of units, an administrative and instructional staff of professional soldiers, numbering 598, exists. Other permanent troops are the regiment of Royal Australian Garrison Artillery, which provides the garrison (with citizen troops as reliefs) for strategic positions and defended ports, and maintains the forts and armament in connection with them; three batteries of Royal Australian Field Artillery; the Royal Australian Engineers; and small detachments of Army Service, Medical, Veterinary and Ordnance Corps. These form a nucleus, each in its own arm, for instruction and administration of the citizen forces. In addition to the active forces, officers who have retired after having passed through a course of training, and members of rifle clubs, who each year fire a prescribed musketry course, are classed as reserves.

The mobile field force, which absorbs the great bulk of the citizen army, consists of six light horse brigades, five field artillery brigades and six unallotted field batteries, and twelve infantry brigades. The garrison troops find the necessary garrisons for the defended ports. Fuller particulars regarding administration and organization will be found in Official Year Book No. 6, page 1046.

(ii.) *Strength of Military Forces under the Federation.* The position of the military forces under the Commonwealth is shewn in the following table:—

#### STRENGTH OF MILITARY FORCES, 1901 to 1913.

| Army Medical Corps     | 1,160  |                      |     | Grand Total ...       | 34,537 |

(iv.) *The Cadet System.* Many years before the consummation of Australian Federation the systematic military training of lads had been instituted in the schools of the colonies, and the cadet system had attained considerable development. The Commonwealth Government made arrangements with the various State Departments of Education for boys attending school to be afforded facilities for drill by their teachers, and regular instruction by the Cadet Instructional Staff of the military forces. The cadet strength has increased rapidly under the Commonwealth defence system, and especially under the new compulsory scheme. Senior cadet battalions, for boys having left school, formed a connecting link between the schoolboy soldiers and the citizen forces. Mounted cadet corps were also formed in various parts of the Commonwealth, the members supplying their own mounts and horse-gear, and being trained in troop and squadron drill by instructors appointed for that purpose. Enrolment in Cadet Corps was voluntary and without pay, and the organisation was distinct from the educational establishments, but under similar conditions as regards drill and discipline. The voluntary system came to an end on 30th June, 1911.

The strength of the Commonwealth cadets, school, senior, and mounted, in the various States was, on 30th June, 1911, as follows:—New South Wales, 11,066; Victoria, 4447; Queensland, 5129; South Australia, 2886; Western Australia, 2847; Tasmania, 1648; Commonwealth, 28,023.

Naval cadets were also organised under the Defence Act. These numbered 748 on 30th June, 1911. Generally, the instruction, given by instructors of the naval forces, aimed at embracing all branches of a seaman's training.

(v.) *Classification of Land Forces.* The following table shews the classification and strength of the land forces in each State, including rifle clubs and cadets, on the 30th June, 1913:—

#### CLASSIFICATION OF LAND FORCES, 1913.

| Branch of Service.                   | Head-quarters | 1st Military District. | 2nd Military District. | 3rd Military District. | 4th Military District. | 5th Military District. | 6th Military District. | Total.  |
|--------------------------------------|---------------|------------------------|------------------------|------------------------|------------------------|------------------------|------------------------|---------|
| Permanently employed ...             | 274*          | 429                    | 806                    | 751                    | 172                    | 207                    | 135                    | 2,774   |
| Citizen Soldiers ...                 | ...           | 4,135                  | 11,183                 | 9,984                  | 3,009                  | 1,443                  | 1,615                  | 31,369  |

\* Including cadets at Royal Military College of Australia, Duntroon.

(vi.) *Instruction and Exchange of Officers.* Officers of the permanent forces are exchanged with officers in Great Britain, India, Canada, and New Zealand. Officers and non-commissioned officers are also sent to England for instruction. In 1911 two officers and four non-commissioned officers, in 1912 two officers and two non-commissioned officers, and in 1913 three officers and two non-commissioned officers of the permanent forces, were sent. In addition, five officers of the militia forces were sent to India for instruction in 1911, five in 1912, and five in 1913.

3. **The Present System.**—The defence of Australia at the present time is enacted and prescribed by the Defence Acts 1903-12 of the Federal Parliament. The provisions of the Acts of 1903 and 1904 and the regulations under them contain the main working principles of Australian defence, the necessary expansion being provided for in the amendments of 1909, 1910, 1911, and 1912, which also enacted the system of compulsory training. The main provisions of the Acts will be found in Official Year Book No. 6, pp. 1050 *et seq.* The principal provision of the Act of 1909 is the enactment of compulsory military or naval training, with regulations for registration, enrolment, and exemption. Statutes were passed subsequently, extending or modifying the legislative provisions, removing obstacles and difficulties, and, where necessary, providing machinery.

(i.) *Peculiar Position of Australia.* The Acts of 1909 and later years were the direct outcome of the feeling existing in a large majority of the citizens of the community, that Australia was insecure under the voluntary system. Recently, a Minister of State for Defence referred to the fact that if on a map of the world all the countries stained with blood were to be marked, Australia would be the only white spot. It is the national policy to effect a guarantee, by thorough preparation for war, that this exemption shall continue.

(ii.) *Compulsory Training.* By the Defence Acts of 1903 and 1904 all male inhabitants of Australia between the ages of 18 and 60 years were made liable to serve in the defence forces *in time of war*. The recent Acts make training and service compulsory *in time of peace*. By the Act of 1909 the principle of universal liability to be trained was made law for the first time in any English-speaking community. By the Act of 1910, which came into operation on 1st January, 1911, by proclamation, compulsory training was established. All male inhabitants of Australia, who are British subjects, and have resided in the Commonwealth for six months, are liable to serve. Exemptions (see *infra*, p. 939), exist for certain individuals and classes of people; and may be granted in the case of unpopulated and sparsely populated areas. The training is as follows:—

- (a) From 12 to 14 years of age, in the junior cadets.
- (b) From 14 to 18 years of age, in the senior cadets.
- (c) From 18 to 26 years of age, in the citizen forces.

(iii.) *Military Population.* In connection with the numbers available the figures of male population are of interest. The total number at cadet age, *i.e.*, between 12 and 18, at the Census of 1911 (3rd April) was about 260,000; at citizen soldier age, *i.e.*, between 18 and 26, 366,000; these latter, with 330,000 at ages between 26 and 35, give 696,000 as the total males at the best period for military service. In addition, there were about 614,000 between 35 and 60.

(iv.) *Record for Anthropometric Purposes.* In connection with the medical inspection, it has been arranged that the colour and character of hair, and the colour of eyes of those examined, shall be recorded for statistical purposes. Instructions have been compiled by the Commonwealth Statistician, in accordance with which the area officers classify the hair-colour under four divisions, comprising three types of fair, two of reddish, three of brown, and two of black. The character of the hair is recorded also in four divisions, *viz.* : (a) perfectly straight and smooth; (b) wavy and curly; (c) frizzy; (d) woolly. Intermediate types are classed under the heading to which they approach most nearly. The eye-colour is classified under four divisions, comprising sixteen types, *viz.*, four of greyish, four of bluish, four of yellowish, and four of brown and hazel.

A systematic record of height, weight and chest measurement of each trainee is also made.

It is possible that later the recommendations of the British Anthropometric Committee will be adopted.

The object of the investigation is to study the development of the Australian nation, the necessary statistic for military identification purposes affording a unique opportunity. A possibility exists of co-ordinating anthropometric work in the schools with that done in connection with compulsory military service.

(v.) *The Land Army.* The Act of 1909 prescribed Junior cadet training for lads 12 and 13 years of age, followed by Senior cadet training for lads from 14 to 18 years of age, thereafter Adult training for two years in the citizen forces, equal to sixteen days annually (eight in camp), followed by registration or one muster parade each year for six years. The existing citizen forces were continued. Arrangements for registration, enrolment, inspection, and medical examination of all persons liable to be trained were made. Some modifications were introduced by the Acts of 1910, 1911 and 1912, the principal change being extension of adult service to eight years. The existing militia (voluntarily enlisted) are free to remain until completion of their term of service. Only officers and non-commissioned officers may re-engage. All members of the forces must conform to the new system.

(vi.) *Visit and Report of Viscount Kitchener.* Before the Act came into operation, viz., at the end of 1909, Field-Marshal Lord Kitchener visited Australia at the invitation of the Government, and after inspecting the military forces at work at camps held at various places throughout the Commonwealth, and the forts and defence works erected or in course of erection, reported upon the whole scheme of land defence. His recommendations (with the exception of some confidential matters) were made public in the form of a memorandum in February, 1910. A scheme was propounded, its main principles being in conformity with the Defence Acts 1903-9. The trend and purport of the published report are given in the Commonwealth Year Book, No. 4, pp. 1085-1088. The adoption of some of Lord Kitchener's recommendations necessitated further amending Acts. The proposed organisation is based upon necessary considerations of (a) the numbers available; (b) the length of service demanded; (c) the proportion of the various arms required. It differs in some of its details from the scheme propounded by Lord Kitchener and includes—

28 regiments of light horse;  
56 batteries of field artillery;  
92 battalions of infantry;

and a due proportion of engineers, army service, and army medical corps, troops for forts, and other services.

(vii.) *Junior Cadets.* Junior cadet training, lasting for two years, consists of 90 hours each year, and begins on the 1st July in the year in which the trainee reaches the age of 12 years. No registration is made, but when the cadet presents himself for registration in the senior cadets in the year in which he attains the age of 14 years, he is required to shew that he has completed the necessary training in his 13th and 14th years. This training is aimed at developing the cadet's physique. It consists principally of physical training for at least 15 minutes on each schoolday, and elementary marching drill. The following subjects are also taught, viz.:—Miniature rifle shooting; swimming; running exercises in organized games; first aid; and (in schools in naval training areas) mariners' compass and elementary signalling. The junior cadets are not organized as military bodies, and do not wear uniform. The Commonwealth Government maintains a staff of special instructors of physical training, by whom classes are held for school teachers in all districts throughout the Commonwealth. The school teachers, in turn, impart the lessons to the boys. The Inspectors of Schools supervise the training, and inspect the cadets on behalf of the Defence Department. The instructors of physical training are also employed in the training of women teachers; but the instruction of girl scholars rests wholly with the States' Education Departments.

(viii.) *Senior Cadets.* Senior cadet training, lasting for four years, begins on the 1st July of the year in which the trainee reaches the age of 14 years. It consists of 40 drills each year, of which four are classed as whole days of not less than four hours, 12 as half-days of not less than two hours, the remainder being night drills of not less than one hour. To meet special cases (including extremity of weather), modifications and substitutions are permitted, but the minimum efficient service required of senior cadets is invariably 64 hours per annum. Registration of every male born in 1894 or subsequently, and who has resided for six months in the Commonwealth, must be effected in the first two months of the calendar year in which he completes his 14th year. The four years' training covers the foundation work necessary for service in any arm. It comprises marching, handling of arms, musketry, physical drill, first aid, guards and sentries, tactical training as a company in elementary field work, and elementary battalion drill. Discipline is strongly inculcated. Senior cadets are not required to attend camp.

Schools containing at least 60 senior cadets may form separate units, and may arrange their parades to suit school time tables, but battalion parades must be attended.

(ix.) *Citizen Forces.* Training in the citizen forces, lasting for eight years, begins on 1st July of the year in which the soldier reaches the age of 18 years. Except in the last year of this service (when only one registration muster parade is necessary in normal peace time) the work consists of continuous training in camp for 17 days in the case of the naval forces, artillery, and engineer arms, and eight days for other arms, and eight days (or equivalent) home training for all arms. The total service is thus 25 days per annum for the specialist and technical corps, and 16 days per annum for other corps, the main body of whom are light horse and infantry (see table on p. 942 *infra*). The home training (total eight days) is divided into whole days, half-days, and nights, the respective minimum duration of these being six, three, and one and a-half hours; two half-days or four nights counting as one whole day.

(x.) *Allotment to Arms.* Trainees to the number required are first allotted to the naval forces. There is no allotment during senior cadet training to particular branches of the military service. Upon transfer to the citizen soldiery, cadets with special educational or technical qualifications are drafted as recruits to one or other of the specialist or departmental corps to the required number; the bulk go to infantry. All other arms, except light horse, are maintained by annual quotas transferred from the senior cadets, as laid down in annual establishments. In the light horse, enrolment is not compulsory, since each recruit is required to provide his own horse; and, while every encouragement is given to eligible trainees to enrol, voluntary enlistment by those not liable for compulsory service is continued for the present.

Persons who are forbidden by the doctrines of their religion to bear arms are, as far as possible, allotted to non-combatant duties, as stretcher-bearers in infantry companies, or as members of the Army Medical Corps.

(xi.) *Exemptions.* Status, condition, employment, or place of abode, may exempt from service. In time of war the exemptions are as follows:—Aliens and non-Europeans; persons certified as medically unfit; members and officers of Commonwealth and State parliaments; judges and police magistrates; clergymen and theological students; police and prison officials; lighthouse-keepers; medical practitioners and nurses in public hospitals; and persons having conscientious objections to bear arms. Medical practitioners, non-Europeans, and conscientious objectors are not exempt from non-combatant duties.

In time of peace the exemptions are:—Persons certified as medically unfit; aliens; non-Europeans (exempt from combatant duties only); school-teachers qualified as instructors of drill; members of the permanent naval or military forces. Theological students may be exempted from training. To meet the case of districts where the

population is sparse and scattered, and where undue hardship would otherwise result, exemptions from training in time of peace may be extended by proclamation.

Burden of proving exemption rests upon the person claiming it, a final appeal lying to the civil courts. Any person convicted by a court of a disgraceful or infamous crime, or who is of notoriously bad character, is permanently disqualified.

(xii.) *Penalties for Prevention or Evasion.* Employers, parents and guardians may not, under a heavy penalty, prevent or attempt to prevent any employee, son, or ward, who is a trainee, from rendering service; nor may any employer penalize or prejudice any employee in his employment, or attempt to do so, because of the latter's service or liability for service; but the employer is not compelled to pay the trainee's wages for the time he is away from work.

A heavy penalty is enacted for evasion of service as required under the Act by those liable to serve. Penalties take the form of a money fine, or detention in military custody under enforced training and discipline. Non-efficients must attend additional training for each year they are non-efficient. Evasion renders the person evading or failing to serve ineligible for employment of any kind in the Commonwealth Public Service.

Children's courts are used where possible for the prosecution of cadets under the age of 16 years.

(xiii.) *Efficiency.* Each trainee must be efficient in each year. Parades, as ordered, must be attended, and a standard of efficiency, based on the number of years' training and the work performed, must be attained.

Parades are classed as compulsory, alternative, and voluntary. The former make up the exact amount of training required (25 days per annum for technical arms, 16 days for others), and may not be missed without leave formally given. Alternative drills are appointed for those absent with leave from compulsory parades, and are allowed to count for pay and efficiency. Voluntary parades are held for those desiring further proficiency, and for candidates for promotion. Any trainee failing to qualify as efficient in any year must do an extra year's training for each failure. Thus, there must be 12 annual entries of efficiency or exemption in each soldier's record before he receives his discharge.

(xiv.) *Pay.* In addition to the remuneration of professional soldiers, pay is provided for all members of the militia. Citizen soldiers who voluntarily enlisted under the old system receive the same rates of pay as formerly, the basis being 8s. per day for gunner, sapper, or private. Trainees under the compulsory system receive 3s. per day during the first year, and 4s. per day during the subsequent years of their training. Higher ranks are paid higher rates. For corporals the daily pay is 9s., for sergeants 10s., for sergeants-major 10s. 6d. and 11s. Light horse trainees receive in addition £4 per annum for keep of horse. In the commissioned ranks the daily rates of pay are 15s. for lieutenants, 22s. 6d. for captains, 30s. for majors, 37s. 6d. for lieutenant-colonels, and 45s. for colonels. Mounted officers also receive horse allowance.

(xv.) *Uniform and Equipment.* The uniform is simple and inexpensive, but suitable. It is free, and the principal articles are issuable every second year. The clothing is of universal pattern, and, beyond distinguishing corps' badges and a colored hat-band, there is no distinction (except rank marks). Uniform is worn on all parades and drills, but its wearing is forbidden when not on military duty. Except in the case of the younger cadets, rifles and free ammunition are provided. Citizen soldiers have their rifles on issue, but arms for senior cadets are stored in local depôts, and are issued as required for drill and musketry. An allowance of free ammunition is made to

commanders of units to encourage rifle shooting. The uniform issued to each citizen soldier is such as to enable him to parade (upon notice) with two woollen shirts, two pair breeches, hat, sleeping cap, puttees or leggings, military boots, and kit bag.

The task of fully equipping the rapidly expanding Australian Army has been undertaken. Technical stores have been indented; but the Commonwealth itself has supplied a large part of its army's furnishings. Four factories have been established by the Commonwealth Government, in which are manufactured woollen cloth, small arms, cordite, and harness and saddlery. A remount dépôt has also been instituted.

(xvi.) *Reserves.—Rifle Clubs.* No new reserves are created under the recent Acts. The present reserves consist of (a) officers, etc., retired from active service; (b) members of rifle clubs. The reserve of officers numbered 914 on 30th June, 1913. It consists of officers who have been fully trained, and are still capable of serving, but who, being unable to continue on the active list through business engagements, removal to rural districts and such like causes, have joined the reserve. There are 1133 rifle clubs in the Commonwealth with a membership of 47,565. An annual course of musketry is fired by these members, but they do not undergo any systematic drill. It is estimated that 60 per cent. of the members are fit for active service. Of these, 19,671 are allotted to citizen units and cable guards on mobilization to make these units up to war strength. The remainder (nearly 9000) are available for future allotment to units. Rifle clubs have been established in connection with many of the citizen units, thus encouraging the citizen soldiery to enhance its shooting efficiency by practice outside the compulsory drill and musketry. These clubs are well supported. Commonwealth teams competing at the British Rifle Association's meetings have been very successful.

(xvii.) *Number under Training.* The male population of Australia of military age gives about 177,000 between 14 and 18 years, and about 321,000 between 18 and 25 years. The estimated medical rejections (based upon the experience of European countries) will probably be 10 per cent. for senior cadets, and from 30 to 35 per cent. for citizen soldiers. To these must be added persons in exempt areas. The number under training, when the system is in full operation, is estimated at 90,000 senior cadets, and 113,000 citizen soldiers, the latter made up of 80,000 trained soldiers, 18,000 recruits, and 15,000 of the 25-26 year men. The future citizen force is planned to comprise 120,000 of all ranks, including about 5000 citizen officers and 8000 non-commissioned officers. Promotion will be absolutely by merit, the principle adopted being that *the best soldiers must lead, whatever their civil avocation or birth.*

(xviii.) *Allotment of Units to Divisional, Brigade, Battalion, and Training Areas.* The organization is territorial, and the divisions based upon infantry units. There are 92 battalion areas, forming 23 brigades. The areas are approximately equal in number of males of citizen soldier age (about 1300), and each furnishes a battalion of infantry, and a proportion of other troops. For administrative purposes, areas are subdivided into two or three training districts. Three brigades will form a division. Two brigade areas will each provide four battalions of infantry, one field artillery brigade (with proportion of divisional ammunition column), one field company of engineers, one company army service corps, and one field ambulance. The other brigade of the division provides four battalions of infantry, two squadrons of divisional light horse, one howitzer brigade, one divisional signal company of engineers, one company army service corps, and one field ambulance. Light horse and field artillery units for light horse brigades will also be furnished by some of the areas. *Personnel* for garrison artillery and submarine and electric engineers for garrison forces will eventually be supplied in the areas nearest to such localities. The average annual contingent of recruits will be about 155 for each battalion area, plus such additions as are required for light horse and field artillery units

raised therein. The figures shewn in the following tables are approximate, and include the recruits (18-19 year), but not the 25-26 year men.

### ULTIMATE ALLOTMENT OF UNITS TO BRIGADE, BATTALION, AND TRAINING AREAS.

| State.          | Brigade Areas. | Battalion Areas.   |   |                 |        |                  |                                  | Training Areas. |      |

\* Also 766 for forts. † Also 327 artillery and 227 engineers at Geelong and Queenscliff for forts. ‡ Also 79 garrison artillery and 13 engineers for Lytton. § Also 86 artillery for forts. ¶ Also 156 artillery and 32 engineers for forts. \*\* Also 86 artillery and 32 engineers for forts. \*\* Also 1804 for forts.

(xix.) *Instructional Staff.* The instructors provided for training consist of 115 officers and 483 warrant and non-commissioned officers of the instructional staff (permanent), and 215 area officers (temporary). They supervise the training of light horse, infantry, and senior cadet units, and instruct in the non-technical duties of specialist corps. Additional officers and non-commissioned officers in the permanent troops instruct in technical work.

The officers of the instructional staff act as Brigade-Majors, and as such, represent the Commandant in the brigade area. They are responsible for the instruction of officers of the existing citizen forces, conduct local schools of instruction, supervise and instruct the area officers, and allot the non-commissioned officers of their detail to various duties. Assistant Brigade-Majors are also furnished from the instructional staff. The duties of area officers vary both in nature and extent, and comprise registration and organisation of those to be compulsorily trained, clothing, arming, equipping and training the new senior cadets.

The staff instructors (warrant and non-commissioned officers) assist in carrying out the administrative work of their areas or units, and instruct cadets and recruits in light horse and infantry drill.

(xx.) *Higher Training.* The principal institution for the higher training of officers is the Royal Military College, Duntroon, Canberra. It contains barracks for 150 cadets, classrooms, well-equipped physical and chemical laboratories, library, riding school, etc. A gymnasium is being erected. Quarters have been provided for the staff. It is intended that the commissioned ranks of all arms of the permanent forces will be filled by

graduates of the college. Ten candidates per annum from New Zealand are entered and trained on behalf of the Dominion Government, which pays £200 per annum for each. Entrance is by open competitive examination. In February, 1911, the first examinations were held, and lectures and studies commenced at the college in the same year, the formal opening ceremony taking place in June, 1911. There were then 41 cadets at the college, 10 being from New Zealand. In April, 1914, the administrative staff numbered four (three military and one civil). One medical officer and two chaplains are attached; there are also 11 military officers doing duty as directors and instructors, and eight civil professors and lecturers. The strength of cadets was 112, of whom 17 came from New Zealand. There were also 49 horses belonging to the college, for mounted work, driving, etc. The full establishment of cadets is 150. No fees are charged for maintenance and instruction, and each cadet receives 5s. 6d. per day to meet expenses of uniform, books, instruments, etc. The course is to last four years, and will be followed by a tour of duty in England or India. The graduates will then do probationary duty in administrative and instructional work, and eventually take the place of the area officers at present engaged.

Government aid is also furnished to United Service Institutions, which have been established in the larger centres. Lectures of great value are delivered by specialists, and war games, manœuvres, etc., carried out. Some of the institutions have large and well-selected libraries.

Schools of instruction, staff tours, etc., are also conducted, and a military magazine is published.

(xxi.) *Railways and Defence.* A War Railway Council, consisting of military and railway officers, was instituted in 1911. Its chief duties are to furnish advice and information regarding railway transport for military purposes, and to secure co-operation between the Commonwealth Defence Department and the States Railway Departments in regard to concentration and mobilization of troops. To prevent delay in the transport of troops, particularly that caused by the transhipment of baggage and implements of war, the Council has recommended the adoption of a uniform railway gauge on lines linking up the States capitals. An Engineer and Railway Staff Corps has been instituted, and numbered 51 officers on 30th June, 1913. Fuller details will be found in Official Year Book No. 6, pp. 1070-1.

(xxii.) *The Universal Training System in Operation.*—(a) *Special Instructional Staff.* The first work in the active carrying out of the scheme commenced with the training of 200 non-commissioned officers for the instruction of the projected army in a six months' camp. Area officers were chosen from the citizen forces, and underwent a six weeks' course of instruction. With the year 1911 came the active enrolment of the new cadets who commenced training on 1st July following. These comprised all males in training areas who were born in 1894, 1895, 1896, and 1897.

(b) *Stages.* The stages are as follows:—

First stage, January to June, 1911.—Existing junior and senior cadets continued to 30th June, 1911, but all equipment returned by that date; registration, inspection, and medical examination of lads whose 14th, 15th, 16th, and 17th birthdays occurred in 1911; preparations made to clothe and equip the new senior cadets.

Second stage, July, 1911, to June, 1912.—Registration, etc., in January and February, of lads whose 14th birthday occurred in 1912; new junior and senior cadet training from 1st July, 1911. About 17,000 of the latter, passed as recruits upon completion of this period, inaugurating the new citizen forces in the third stage (1st July, 1912).

Third stage, July, 1912, to June, 1913.—Registration, etc., in January and February, of lads whose 14th birthday occurred in 1913; new citizen forces:—training began with about 17,000 recruits (18-year-old persons allotted from the new senior cadets). During the third, fourth, and subsequent stages the new senior cadet force, numbering about 90,000, continues. Upon expiry of this period, the second quota of senior cadets (1895 lads) to the number of 17,000 passed as recruits to the citizen forces (1st July, 1913).

Fourth and subsequent stages, after July, 1913 (and each year).—Registration, etc., of lads whose 14th birthday occurs in 1914, and so on. In the fourth and subsequent stages, the new citizen forces will also be continued, increasing each year by about 17,000.

(c) *Summary of Working of the System in 1911-12 (Second Stage).* On 31st December, 1911 (six months after commencement of the new senior cadet training), the total registrations in training areas numbered 155,132. Of these, 105,133 had been medically examined, and 93.2 per cent. passed as fit. Exemptions in training areas (generally cases so far from places of training that attendance would involve great hardship) numbered 57,949. Of the total number liable for service 89,138 were actually in training.

The junior cadets do not register, but are medically examined. On 31st December, 1911, 33,767 had been examined, and 97.8 certified as fit.

(d) *Summary of the Working of the System in 1913-14 (Third and Fourth Stages).* The numbers up to 31st December, 1913, include the 1894 and 1895 quotas, who, on 1st July, 1912, and 1st July, 1913, passed to the citizen forces. They were as follows:—

**UNIVERSAL TRAINING.—REGISTRATIONS, MEDICAL EXAMINATIONS, EXEMPTIONS, AND NUMBERS SERVING, CITIZEN FORCES, 31st DECEMBER, 1913 (1894 AND 1895 QUOTAS).**

| Military Dist. | Total Registrations. | Total Medically Exam'd. | Number Medically Fit. | P'centage Medically Exam'd who are Fit. | Number Unfit and Temporarily Unfit | P'centage Medically Exam'd who are Unfit and Temporarily Unfit | Total Exemptions Granted in Training Areas. | Total No. Liable for Training | Total Number Actually in Training. |

(c) *Total Number in Training under Compulsory System.* From these tables it will be seen that there are now approximately 34,000 citizen soldiers, and 87,600 senior cadets undergoing compulsory training, and that 50,000 junior cadets are certified for physical training.

(xxiii.) *Success of the System.* A slight amount of opposition has been manifested to the system. Though principally from shirkers, there are also a small number of persons who oppose military service on religious grounds. As already stated, however, conscientious objectors are allotted duties of a non-combatant nature. The prosecutions and penalties for evasion, etc., though not wholly, are mainly operative against shirkers. It is claimed that the scheme, both before its inception and since its successful inauguration, has had the support of leading statesmen of all political views, as well as the vast majority of the citizens of the Commonwealth. In general, the trainees are alert and well disciplined while on parade; and the interest and enthusiasm of the lads is shewn by the large number of candidates seeking promotion at competitive examinations (practical and theoretical), after courses of lectures, demonstrations, and special parades. Another

evidence of enthusiasm is the fact that the applicants for enrolment in the technical arms, where the total service is considerably greater than the absolute minimum of 16 days annually required from infantry and light horse, is always greatly in excess of the requirements of those arms. Further, a great deal of voluntary work is put in in all branches of the service, and the rifle clubs of the citizen units are well patronised. Many of the regiments have athletic, gymnastic, and swimming clubs, and sports meetings are frequently held. Patriotic citizens in local centres have contributed generously to funds for establishing bands, regimental clubs, annual sports gatherings, etc.

In regard to opposition to the system, the figures and percentages of prosecutions and convictions are interesting. Registrations to 31st January, 1914, numbered 234,030; of these 122,933 were liable for training. Prosecutions from 1st July, 1911 (inauguration of system), to 31st January, 1914, numbered 22,402. Of these 19,317 resulted in convictions. The average annual prosecutions were thus 8672; convictions, 7477. It must be remembered that these figures include persons prosecuted and convicted more than once, and that all prosecutions and convictions are not against those actually liable for service, but include cases against employers (for penalising in employment, contrary to section 134 of the Act) and parents and guardians (failing to register sons, etc.). Percentage of annual prosecutions to registrations is 3.7; to number liable for training, 6.90; percentage of trainees prosecuted to number registered and liable is not available, but the figures would be substantially reduced if (parents, employers, and those prosecuted more than once being deducted) only those liable for training were shewn. Further, a prosecution follows shortage of drills, and in many cases is not the outcome of active opposition.

## § 2. Naval Defence.

**1. Naval Defence under the States.**—Prior to 1890, when arrangements were made with the British Government for the maintenance of an Australian squadron, provision for naval defence had been instituted in New South Wales, Victoria, Queensland, and South Australia, where gunboats, torpedo boats, or small cruisers were commissioned, and naval volunteers raised. A fuller historical account of the Australian naval forces under the States is given in the Commonwealth Year Book, No. 2, pp. 1084, 1085.

**2. The Naval Agreement with the British Government.**—(i.) *The Original Compact.* The naval defence of Australasia and its trade was entrusted primarily to ships of the Imperial Navy, maintained under an agreement entered into between the British Government and the Governments of the Commonwealth and New Zealand, and at their joint charge. This agreement was embodied in Acts passed by the several Legislatures some ten years prior to Australian federation. According to its terms, a naval force, additional to the vessels of the Australian Naval Station, which were to be maintained at their normal strength, was to act as an auxiliary squadron. It consisted of five fast third-class cruisers and two torpedo gunboats, and its special function was the protection of the floating trade in Australasian waters. The agreement was made for ten years, and was then, or at the end of any subsequent year, to be terminable only upon two years' notice being given. On its termination, the vessels were to remain the property of the Imperial Government. Three cruisers and one gunboat were to be kept continuously in commission, and the remainder in reserve in Australasian ports, but ready for commission whenever occasion might arise. The vessels were to remain within the limits of the Australasian station, and were to be employed, in times of peace or war, within such limits, in the same way as the Sovereign's ships of war, or employed beyond those limits only with the consent of the Colonial Governments. The first cost of the vessels was paid out of Imperial funds, but the Colonial Governments paid interest on the prime cost at 5 per cent. (up to a maximum of £35,000 per annum), and a sum not

exceeding £91,000 for annual maintenance of the vessels, or a total annual contribution of £126,000. In times of emergency or actual war, the cost of commissioning and maintaining the three vessels kept in reserve during peace, was to be borne by the Imperial Government, and, in every respect, the vessels were on the same status as the ships of war of the Sovereign, whether in commission or not. The officers and men of those in commission were subject to a triennial change. The tenth annual contribution, which was payable in advance on 1st March, 1900, apportioned on a population basis, was as follows:—New South Wales, £37,973; Victoria, £32,749; New Zealand, £21,304; Queensland, £13,585; South Australia, £10,439; Western Australia, £4816; Tasmania, £4776.

(ii.) *The Agreement of 1903.* The agreement was not dissolved by the union of six of the contracting colonies, but its renewal, with some alterations, was embodied in the Naval Agreement Act of 1903, the Parliament of New Zealand also assenting. The strength of the squadron was altered; and the amount to be contributed was increased. One-half of the annual cost of maintenance was to be borne by the colonies—five-sixths of the half (but not exceeding £200,000) by Australia, and one-sixth (but not exceeding £40,000) by New Zealand. The agreement, like the earlier one, was for ten years.<sup>1</sup> By a subsequent arrangement the strength of the squadron was established at one first-class armoured cruiser, three second-class cruisers, and five third-class cruisers.

3. **Development of Commonwealth System from 1901 to 1913.**—*Administration.* Australian defence, in both its branches (military and naval), passed to the Commonwealth in 1901, and in 1903 the naval agreement was renewed. Prior to 1905 a naval officer commanding administered the naval forces under the minister. When the Council of Defence was established in that year, the Naval Board was constituted and took over the administration of the Commonwealth naval forces. Continuity of policy and administration are thereby believed to be ensured, whilst efficiency and uniformity are provided for in the scheme of inspection and report by an officer who, as Director of Naval Forces, is appointed to deal with the training of the *personnel*, and the condition of the *matériel*, of naval forces and works. The floating trade of the Commonwealth exceeds £200,000,000 per annum, and its adequate protection involves corresponding naval provision, with such naval war material as will permit the principal lines of sea communication being kept open, and ensure that Australian ports are fully defended.

4. **The Present System.**—(i.) *Australian Naval Policy.* An outline of the development of Australian naval policy will be found in Commonwealth Year Book No. 3, pp. 1060, 1061. For the more effective coastal defence of the Commonwealth it was decided in 1909 to create an Australian naval force, to replace the squadron heretofore maintained under the naval agreement with the British Government. It was decided at the Imperial Defence Conference in 1909 that Australia should provide a fleet unit, consisting of an armoured cruiser\* of the *Indomitable* class, three unarmoured cruisers of the *Bristol* class, six destroyers of the improved "River" class, and three submarines of "C" class; also the necessary auxiliaries, such as docks and dépôt ships. The cost of construction at English prices would be about £3,750,000, and the estimated annual cost about £750,000. Of this sum the Imperial Government offered to contribute £250,000, but the Commonwealth Government decided to bear the whole cost.

(ii.) *The Australian Fleet.* The building of the fleet and the training of the crews is proceeding. Skilled artisans were despatched from Australia to gain practical experience in naval shipbuilding, and vessels are constructed in both Britain and Australia. Sailors of all ratings are also trained for the Commonwealth service. The first instalment of the Australian fleet unit consisted of two torpedo boat destroyers, of British

1. Since modified; see page 950, *infra*.

\* Now called "battle cruiser." † Since altered to two submarines of "E" class.

construction. One was launched at Govan-on-the-Clyde, on 9th February, 1910; a second at Dumbarton on 9th April following. The vessels are named after Australian rivers, those launched in Britain having been christened *Parramatta* and *Yarra*. They were commissioned in September, 1910, as ships of the Royal Navy, and arrived in Australia in December, 1910. A third destroyer, the *Warrego*, was shipped to Sydney in parts. She was re-erected at the Commonwealth dockyard, Cockatoo Island, Sydney, launched on 4th April, 1911, and commissioned on 1st June, 1912. A description of these and the other vessels of the fleet will be found in Official Year Book No 6, pp. 1066-7. Three other destroyers (to be named *Torrens*, *Swan*, *Derwent*) are being built at the Commonwealth dockyard in Sydney.

The construction of the battle cruiser *Australia* was commenced in June, 1910. She was launched on 25th October, 1911, and commissioned in June, 1913, arriving in Australian waters in the following September. Two smaller cruisers, the *Melbourne* and *Sydney*, were constructed in Great Britain. They were launched in May, 1912, and arrived in Australian waters in 1913. The third cruiser, the *Brisbane*, is being built at the Commonwealth dockyard, Sydney, and will probably be launched in August, 1914. The two submarines have been built in England, and arrived in Australian waters in May, 1914. Pending completion of the *Brisbane*, the *Encounter* has been lent from the Royal Navy for service in the Royal Australian Navy. The Admiralty has also presented the Commonwealth Government with the cruiser *Pioneer*. This vessel was taken over by the Naval Board on 1st March, 1913, and recommissioned with the crew of the *Protector* (augmented as necessary) for service as a naval reserve training ship, the *Protector* being used for service as a tender to the Gunnery School.

The following table shews the vessels of the Royal Australian Navy, completed and building:—

#### LIST OF SHIPS OF THE ROYAL AUSTRALIAN NAVY, APRIL, 1914.

| Vessel.                        | Description.            | Displacement. | Power.      | Position.        |
|--------------------------------|-------------------------|---------------|-------------|------------------|
|                                |                         | Tons.         |             |                  |

| <i>Paluma</i> ...              | Gunboat ...             | 360           | 400 h.p.    | "                |
| <i>Parramatta</i> ...          | Torpedo boat destroyer  | 700           | 12,000 h.p. | "                |
| <i>Pioneer</i> ...             | Light cruiser ...       | 2,200         | 7,000 h.p.  | "                |
| <i>Protector</i> ...           | Gunboat ...             | 920           | 1,641 h.p.  | "                |
| <i>Swan</i> ...                | Torpedo boat destroyer  | 700           | 12,000 h.p. | Building, Sydney |
| <i>Sydney</i> ...              | Light cruiser ...       | 5,600         | 22,000 h.p. | Commissioned     |
| <i>Tingira</i> ...             | Boys' training ship     | 1,800         | ...         | "                |
| <i>Torrens</i> ...             | Torpedo boat destroyer  | 700           | 12,000 h.p. | Building, Sydney |
| <i>Warrego</i> ...             | "                       | 700           | 12,000 h.p. | Commissioned     |
| <i>Yarra</i> ...               | "                       | 700           | 12,000 h.p. | "                |
| <i>A E 1</i> ...               | Submarine ...           | 800           | 1,750 h.p.  | "                |
| <i>A E 2</i> ...               | "                       | 800           | 1,750 h.p.  | "                |

(iii.) *Personnel.* The fleet is manned, as far as possible, by Australians, supplemented by Imperial officers and men. Of the former, besides the previously existing permanent naval forces, those trained in the British fleet are available. It is intended that there shall be interchangeability with the Royal Navy of officers and men, and also of ships. Recruiting centres have been established in the Commonwealth with excellent results. The naval reserves comprise (a) members of the Australian branch of the Royal Naval Reserve, (b) members of the Citizen naval forces, and (c) Senior naval cadets. The navy has first choice from amongst the trainees under the compulsory system. The following table shews the strength of the naval forces in March, 1914 :—

**STRENGTH OF THE NAVAL FORCES (PERMANENT AND RESERVES),  
MARCH, 1914.**

| Description of Force.                                 | Number Borne. |       |

| Total ... ..  | 8,599         |       |

\* Taken over from Admiralty, 1st July, 1913.

(iv.) *Visit and Report by Sir Reginald Henderson.* At the invitation of the Government, Admiral Sir Reginald Henderson visited Australia to advise upon naval matters generally. A summary of his report will be found in Official Year Book, No. 6, pp. 1067-8. It provides for 52 vessels and 15,000 men; expenditure on construction, works, etc., £40,000,000, with an ultimate annual naval vote of £4,794,000. Six naval bases, and eleven sub-bases, are recommended. The 52 vessels would consist of 8 armoured cruisers, 10 protected cruisers, 18 destroyers, 12 submarines, 3 dépôt ships, and 1 fleet repair-shop, the building of which would extend over 22 years. The annual cost of *personnel* would be £601,000 in 1913-14, and would increase to £2,226,000 in 1933-4. Annual cost of maintenance of ships in commission would be £262,000 in 1913-4, rising to £1,226,000 in 1933-4. Annual expenditure on construction and maintenance of ships would increase from £2,349,000 in 1913-4 to £4,824,000 in 1932-3. The strength of the fleet would be 23 ships in 1918, 42 ships in 1923, 48 ships in 1928, and 52 ships in 1933. In the earlier years portion of the crews would be obtained from Great Britain, but this would cease in the period 1923-8.

(v.) *Naval College.* A naval college has been established, and its staff appointed. A temporary institution at Geelong, Victoria, was opened in March, 1913. The permanent college is being built at Captain's Point, Jervis Bay, and is to be furnished with

all necessary workshops, machinery, etc. The college is organised as a ship. Its complement is 13 officers and 44 petty officers and men. In addition, there are six members of the civil teaching staff. In April, 1914, the cadet roll numbered 59.

(vi.) *The Compact with the Imperial Government.* The Australian Government is building its navy according to the terms of an official paper (cd. 5746-2) submitted to the Imperial Conference held in London in 1911, and on the plan formulated by Admiral Henderson (after an inspection of Australia's capitals and other ports and coast line, in 1911). There is no formal contract or agreement between the British and the Commonwealth Governments. The last actual agreement was that of 1903, which continued in force the original agreement, whereby the Imperial Government maintained a squadron in Australian waters, the Commonwealth paying £200,000 per annum to the Imperial Government. Before the expiration of the time for which the agreement was made, the Commonwealth began the work of fleet construction. Up to the year 1911-12, £200,000 was annually paid. For 1912-13, £175,000 was set down in the Estimates, and £166,600 paid. There is no amount under "Naval Agreement Act" in the 1913-14 Estimates. Some departures are made from Admiral Henderson's recommendations, but generally they have been adopted. The Commonwealth is now fulfilling the larger obligation of fleet-building, and is maintaining its own vessels. The establishment of naval bases and sub-bases required for the fleet unit is also proceeding. The Commonwealth parliament amended the *Naval Agreement Act 1903*, by No. 10, of 1912 (*Naval Agreement Act 1912*), providing that the Governor-General may, from time to time, arrange with the Imperial Government for the reduction of the Australian squadron, and for reduction in the naval subsidy.

As already stated, the present situation is not governed by a formal contract or agreement. The Commonwealth Government has, by regulations and orders, given effect to some, and intends giving effect to others of the items submitted to the Conference.

(vii.) *Training Ships.* A vessel (*Sobraon*) purchased from the Government of New South Wales, has been fitted up as a boys' naval training ship (*Tingira*), and was commissioned in April, 1912. The full capacity of the ship is 300. A draft of 100 started training on 1st June, 1912, and recruiting has since been continuous. The age of entry is 14½ to 16 years, and the boys engage to serve until they reach the age of 25. Upon medical certification of fitness, they are entered for service in the Royal Australian Navy. The boys are to provide the *personnel* of the new fleet unit, and already a number of them have been drafted into the various vessels of the fleet. The training ship is thus a very important part of the new scheme. The strength of trainees in March, 1914, was 182.

(viii.) *The Naval Station of the Commonwealth of Australia.* The following are the limits of the Naval Station which, since 1st July, 1913, have been controlled by the Commonwealth Government, acting through the Naval Board:—On the North: From 95 degrees East longitude by the parallel of 13 degrees South to 120 degrees East longitude; thence North to 11 degrees South latitude; thence to the boundary with Dutch New Guinea, on the south coast, in about longitude 141 degrees East; thence along the coast of British New Guinea (Papua) to the boundary with German New Guinea, in latitude 8 degrees South; thence east to 155 degrees East longitude. On the East: By the meridian of 155 degrees East longitude to 15 degrees South latitude; thence to 28 degrees South latitude on the meridian of 170 degrees East longitude; thence south to 30 degrees South latitude; thence west to the meridian of 160 degrees East longitude; thence south. On the South: By the Antarctic Circle. On the West: By the meridian of 95 degrees East longitude.

## § 3. Expenditure on Defence.

1. **Expenditure, 1908-9 to 1913-14.**—The following table gives the expenditure of the Department of Defence from 1908-9 to 1912-13, and the estimate for 1913-14:—

## EXPENDITURE ON DEFENCE, 1908-9 to 1913-14.

\* Excluding extraordinary expenditure. † Total defence expenditure.

## § 4. Industrial Establishments and Remount Depot.

1. **Commonwealth Factories.**—Four factories have been established under the authority of the Defence Act in connection with the Defence Department. The Commonwealth Harness, Saddlery, and Leather Accoutrements Factory at Clifton Hill, Victoria, was opened in September, 1911. On 31st March, 1914, there were 173 persons employed, including 33 females. A large quantity of harness and saddlery, and leather and canvas equipment has been turned out for the Defence and Postmaster-General's Departments. The factory is now able to cope with practically the whole of the requirements of these departments in the way of leather and canvas equipment. At the Cordite Factory at Maribyrnong, Victoria, cordite is manufactured for the cartridges required for military purposes. On 31st March, 1914, the employees numbered 97. The first output was in June, 1912, and the average output of finished cordite after the factory had been in operation six months was over  $5\frac{1}{2}$  tons per month. The Clothing Factory at South Melbourne, Victoria, commenced operations on 3rd January, 1912. Since 1st July, 1912, a satisfactory output has been maintained. The number of employees on 31st March, 1914, was 414, of whom 324 were females. Extensions to the factory will provide accommodation for 300 more hands. The establishment will ultimately supply the whole of the uniform clothing required for the Defence Forces and the Postmaster-General's Department. The Small Arms Factory at Lithgow, N.S.W., was opened on 1st June, 1912. The first instalment of Australian arms was delivered in May, 1913. Employees numbered 379 on 31st March, 1914. A fifth Commonwealth factory has been established for woollen fabrics, and a manager appointed. A site has been secured at Geelong, Victoria, and the construction of the buildings commenced.

2. **Expenditure.** The expenditure up to 30th June, 1912, in the purchase of land, machinery and plant, factory fittings, and furniture in connection with the factories now in operation, was approximately as follows:—

|                       |     |     |     |     |          |
|-----------------------|-----|-----|-----|-----|----------|
| Small Arms Factory... | ... | ... | ... | ... | £149,000 |
| Cordite Factory       | ... | ... | ... | ... | 85,800   |
| Clothing Factory      | ... | ... | ... | ... | 12,300   |
| Harness Factory       | ... | ... | ... | ... | 6,500    |

It is estimated that the initial cost of establishing the woollen mills will be about £85,000.

3. **Remount Depot.** The Act of 1910 authorised the establishment and maintenance of horse depots, farms, and stations for the breeding of horses. Up to the present 1686 remounts have been purchased. They are primarily to supply the requirements of the Field Artillery Batteries, but are also available for the use of other mounted units. Remount depots have been purchased or are leased in each of the military districts, and veterinary hospitals have also been established in the larger States. In Victoria and South Australia stables have been built. A remount section of the Army Service Corps has been formed for the purpose of breaking, training and looking after remounts generally. The present personnel of this corps is 158.

## § 5. Australian Contingents.

1. **New Zealand and Sudan Campaigns.**—Many colonists served with the Imperial forces in the New Zealand war. Fuller particulars will be found in Official Year Book No. 6, p. 1071. In 1885 a field battery, an infantry battalion, and an ambulance corps, numbering in all 770, with 218 horses, left New South Wales to take part in the Suakin campaign.

2. **South African War.**—In 1899 the outbreak of war with the Boers led to the several colonies offering contingents. This service was continued when, on 1st March, 1901, the control of the defence forces passed over to the Commonwealth. Besides the troops officially organised, many Australians served as individuals in the campaign. The following table shews the strength of the military contingents sent at various times from Australia to South Africa:—

**STRENGTH OF MILITARY CONTINGENTS SENT FROM AUSTRALIA TO  
SOUTH AFRICA.**

| State.                | State Troops<br>at<br>State Expense. |                 |         | State Troops<br>at Imperial<br>Expense. |                 |         | Commonwealth<br>Troops. |                 |         | Grand Total. |                 |         |

| Tasmania ...          | 6                                    | 173             | 58      | 17                                      | 358             | 422     | 13                      | 290             | 303     | 36           | 821             | 783     |
| Total ...             | 290                                  | 5,492           | 5,418   | 323                                     | 5,765           | 6,649   | 235                     | 4,070           | 4,247   | 848          | 15,327          | 16,314  |

There were, in addition, several special service officers attached, at the request of the colonial Governments, to the British forces; these officers served with the Imperial troops with a view to aiding the development of the Commonwealth forces, particularly in regard to the routine and administration of troops on service.

3. **The China War.**—The Home Government also accepted the offer of contingents from Australia on the outbreak of the Boxer rebellion in China. Naval volunteers were furnished by New South Wales and Victoria, and South Australia equipped a gunboat for the Imperial service. The strength of the New South Wales contingent was 260, and that of the Victorian 200, of all ranks.

### § 6. New Zealand Defence.

A more detailed account of the New Zealand military system will be found in Official Year Book No. 6, pp. 1073-4. The liability of all male inhabitants for service is laid down in the Defence Act and regulations. These provide for the gradual military training of every male from the age of 14 to the age of 25, after which service in the Reserve up to the age of 30, is required. There are no distinctions and no exceptions, except physical unfitness. Persons with conscientious objections to fighting serve in non-combatant branches.

As junior cadets, from 12 to 14, all boys undergo a course of elementary military training (chiefly physical) under the Education Department. At 14 they are transferred to the senior cadets, remaining in that division till 18, and performing regular military work, though not liable for active service. At 18 active service in the regiments of the territorial force begins, and continues to the commencement of the reservist period (which period extends from 25 to 30). During training in the regiments service may be demanded in case of war or other national emergency. A secondary reserve is furnished by the rifle clubs. Registration of senior cadets for service is compulsory at the age of 14. A register is also kept of all males under the age of 22.

The numbers registered up to 31st July, 1913, were:—Territorials, 29,650; senior cadets, 42,279; total, 71,929. The numbers actually on the strength on 30th June, 1913, were:—Territorials, 24,763; Senior cadets, 24,743; members of rifle clubs, 6780; total, 56,286. The establishment of the territorial forces was 30,000. The total strength of the permanent force, which is not included in the above figures, was 607 on 30th June, 1913.

The following table gives the ordinary defence expenditure of New Zealand from 1908-9 to 1912-13:—

#### DEFENCE EXPENDITURE, NEW ZEALAND, 1908-9 to 1912-13.

| Year        | ... | 1908-9.  | 1909-10. | 1910-11. | 1911-12. | 1912-13. |
|-------------|-----|----------|----------|----------|----------|----------|
| Expenditure | ... | £193,976 | £188,950 | £212,281 | £508,043 | £605,343 |

In addition, the sum of £525,000 has been expended under the *Naval Defence Act*, 1909.

## SECTION XXIX.

## PAPUA (BRITISH NEW GUINEA).

## § 1. New Guinea.

1. **Geographical Situation of New Guinea.**—New Guinea, frequently described as the largest island in the world, lies to the north-east of Australia, between  $0^{\circ} 25'$  and  $10^{\circ} 40'$  S. latitudes, and between  $130^{\circ} 50'$  and  $150^{\circ} 35'$  E. longitudes. Its estimated area exceeds 300,000 square miles, the greatest length being 1490 miles and the greatest breadth 430 miles.

2. **Discovery.**—The island was probably sighted by Abreus in A.D. 1511. The first visit by Europeans was apparently either that by the Portuguese Don Jorge de Meneses on his way from Goa to Ternate in 1526, or that by the Spaniard Alvaro de Saavedra in 1528. In 1606 Torres, having parted company with De Quiros at the New Hebrides, sailed, on his way to the Philippines, through the strait which separates the island from Australia, and which now bears his name.

3. **Colonisation.**—Little progress was made for many years in exploration and settlement. First the Portuguese, and afterwards the Dutch, who to a great extent replaced them as the principal European traders in the East, seem to have jealously excluded other traders and adventurers, and to have kept the knowledge of their discoveries to themselves. The coasts were visited by Roda, Schouten, Lemaire, Tasman, Dampier, Torres, Bougainville, and Cook; but the difficulties of navigation, the savagery of the islanders, and the tempting fields for enterprise in the more temperate regions further south, diverted the energy of traders and voyagers. Forrest describes a voyage by himself in 1774. In 1793, New Guinea was annexed by two commanders in the East India Company's service. Since that date the Dutch have made extensive surveys of the western portion, and the British and Germans have occupied and colonised the eastern.

4. **Partition.**—These three powers have agreed to the partition of New Guinea, each having suzerainty over islands adjoining its own territory. The whole of the portion west of the 141st degree of latitude, comprising about 150,000 square miles, or nearly half the island, belongs to the Dutch. The eastern half is divided in almost equal portions between Great Britain and Germany, the area possessed by each (with adjacent islands) being about 90,000 square miles. An Anglo-German boundary commission, appointed for the purpose of defining the boundary between the territories of the two nations, started operations on 26th December, 1908, and completed the field-work on 27th October, 1909. The total length of boundary delimited was  $66\frac{1}{2}$  miles. The work was both important and difficult. For a considerable portion of the survey, the country was exceedingly rough and mountainous, and the natives hostile. In one instance, the line was carried over a range at an elevation of 11,110 feet. The Dutch colony forms part of the residency of Ternate in the Moluccas, and has not been extensively developed. The German protectorate, where considerable commercial development has taken place, includes the northern part of the eastern half of the mainland, known as Kaiser Wilhelm's Land, and the large islands of the Bismarck Archipelago and the Solomon Group, as well as nearly 200 smaller islands. The south-eastern portion of New Guinea, nearest Australia, is British, and a dependency of the Commonwealth of Australia.

## § 2. The Australian Dependency of Papua.

**1. Australian Dependency of Papua.**—Surveys of the east coast of New Guinea by Stanley, Yule, Blackwood, Moresby, and others, brought home to Queensland, and to Australia generally, the danger to her commerce which would result from foreign possession of the islands and coasts opposite to Cape York, and from the holding by a hostile power of the entrance to the splendid waterway inside the Barrier Reef. The mainland opposite the shores of Queensland east of the 141st meridian was therefore annexed by that colony in 1883; but the action was disallowed by the British Government. In 1884, however, a British protectorate was authoritatively proclaimed by Commodore Erskine over the region lying east from the 141st meridian as far as East Cape, with the adjacent islands as far as Kosman Island. In the year following an agreement with Germany fixed the boundaries between the possessions of the two countries, and to Great Britain was assigned the portion now known as Papua, lying between the extreme limits of 5° and 12° S., and 141° and 155° E. The British protectorate was subsidised by Queensland, New South Wales, and Victoria, and lasted till 4th September, 1888, when it was proclaimed a possession of the Empire. Its constitution was then that of a Crown colony, in association, however, with Queensland. Administration was in the hands of a Lieutenant-Governor, aided by an executive and a legislative council, and advised by a native regulation board. Port Moresby, on the south coast, was made the headquarters of the official establishment; a supreme court was established there, and magisterial courts in the districts; and an armed native constabulary force, numbering 250 on 30th June, 1913, under a European officer, was instituted for the maintenance of order. There were also, on the same date, 536 native village constables employed by the Crown.

**2. Annexation by Commonwealth.**—The territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of the 18th March, 1902, and was accepted by the Commonwealth by the Papua Act 1905, which came into force by virtue of the proclamation aforesaid. The transfer was made under the authority of section 122 of the Constitution (see p. 34 hereinbefore). The territory is now under the administration of the Commonwealth, but not included within it; and is divided into eleven magisterial districts.

**3. Physical Characteristics.**—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Sudest and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Straits. The length of Papua from east to west is upwards of 800 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is computed at 3664 miles—1728 on the mainland and 1936 on the islands. The total area is about 90,540 square miles, of which 87,786 are on the mainland and 2754 on the islands. From the eastern end of the territory rises a chain of mountains, which forms a great central ridge and attains its greatest altitude, as it extends westwards, in the Owen Stanley Range, the highest points of which are Mount Victoria (13,200 feet), Mount Scratchley, the Wharton Range, and Mount Albert Edward. The western end of the possession is for nearly 300 miles generally low and swampy for some distance along the coast. The whole territory is well watered. The great mountains and a great portion of the lower country are covered with forest. The islands are mountainous, and, with the exception of the low coral islands of the Trobriand Group, part of Murua, and a few others of small dimensions, principally of volcanic formation. The highest is Goodenough Island, 8000 feet. The largest rivers of the mainland flow into the Gulf of Papua. The Fly River, with its tributaries, drains an extensive area of the territory of the Netherlands, as well as the British. Its length in British territory is about 620 miles, and it is navigable by a steam launch for over 500 miles. Other important rivers are the Turama and the Purari. There are many excellent harbours.

### § 3. Population.

The total white population of Papua on 30th June, 1913, was 1219, made up of 847 adult males and 223 adult females (adults being persons over 16 years of age), and 68 male and 81 female children. The following table gives the population of Papua for the last five years:—

#### WHITE POPULATION OF PAPUA, 1909 to 1913.

YEAR ENDED 30TH JUNE.

| 1909. | 1910. | 1911. | 1912. | 1913. |
|-------|-------|-------|-------|-------|
| 702   | 879   | 1,032 | 1,064 | 1,219 |

The chief occupations of whites are:—Government officials and employees, 118 ; planters (including managers and assistants), 151 ; and miners, 174.

It is not possible to make a reliable estimate of the number of natives, owing to the fact that much of the interior country is unexplored. It is generally assumed to be somewhere between 400,000 and 500,000. These speak many languages and dialects. The coloured population, other than Papuans, numbered on 30th June, 1912, 405. On the same date, half-castes, including Papuan half-castes, totalled 324. An Immigration Restriction Ordinance prohibits the immigration into the territory of persons who fail to pass the dictation test, or who are persons of bad character, or likely to become a charge upon the public. Exemptions may, however, be granted by the Lieutenant-Governor to persons of special skill whom it is desired to employ as overseers or foremen.

### § 4. Native Labour.

The rights of both employer and labourer are conserved by the Native Labour Ordinances. Service on the part of the native is voluntary, and he must be justly treated, and properly housed and fed. Employers may recruit personally, or obtain their natives through a licensed recruiter. Contracts of service must be in writing, entered into before a magistrate or other qualified officer, and the natives must be returned to their homes on completion of engagement. The labour question is complicated by the communistic system which prevails in the villages. Native custom demands that the friends or fellow-clansmen of the returned labourer receive a share in whatever he gets. The result is that the stimulus of individual interest is largely absent. During the period of service the recruiter or employer is personally responsible for the native's welfare. Refusal to work after engagement, or desertion from service, renders the labourer liable to imprisonment. On the other hand, a magistrate may terminate an engagement where unjust or harsh treatment by the employer is proved. The term of indenture must never exceed three years, and in the case of miners and carriers eighteen months is the limit, but re-engagements may be made. The magistrate must satisfy himself that the remuneration is fair, that the native is willing to undertake the service, and that there is no probability of unfair treatment or detention. Wages must be paid in the presence of an officer. A medicine chest, stocked with necessary drugs and first aid instruments, must be kept by all employers.

Just treatment, good food, and satisfactory remuneration for his labour have made the Papuan savage an excellent servant. With considerable natural aptitude and intelligence, he is able to understand readily what is required by his employer ; consequently

native labour is very largely engaged by the Administration for the construction of roads and public works, and by the private employer for the clearing and upkeep of plantations. In some districts, however, the natives manifest a marked unwillingness to work. Actual ill-treatment of native employees may be said to be non-existent.

The number engaged under contract of service during the year ended 30th June, 1913, was 6975. In addition, there were nearly 3000 natives employed who were not under contract of service.

## § 5. Production.

1. **Papuan Products.**—The products of the territory are obtained from its agricultural, forestal, fishing, mining, and manufacturing industries. There is a Papuan Court at the Imperial Institute, London, where, beside maps, handbooks and reports, a representative collection of products is shewn, additions being made to the exhibits from time to time. Displays of Papuan produce are also made at Exhibitions held in the Commonwealth. The industries of Papua are not numerous, but they are becoming more diversified. In many cases, some years must elapse before the raw material is available for commerce.

2. **Agriculture.**—(i.) *Soil and Rainfall.* The physical features of Papua are favourable to agriculture. Rich soils at varying elevations, and heavy and evenly-distributed rainfall, have ensured success in cultivating almost every tropical product of value. The territory comprises immense areas of rich alluvial and volcanic soils along the coast, and equally fertile land at elevations up to 6000 feet. Splendid rainfalls are recorded, except over a belt of country which runs back from the coast to the hills, and which has its dry season from May to November. This "dry" area is admirably suited for the production of tobacco, fibres, cotton, etc. There are eighteen meteorological stations throughout the territory. An economic museum and agricultural library have been established. By anticipating and removing many of the pioneering difficulties the Government has made the task of the colonist an easy one. The feature of recent years has been the steady investment of capital in the development of large areas previously acquired. One of the principal difficulties of planters is the heavy growth of weeds, and the Government has undertaken experiments with the planting of grasses to take the place of weeds, and so keep down the gross rank vegetation.

(ii.) *Plantations.* On 31st March, 1913, there were 216 plantations. Agricultural settlement has been mostly in the Central and Eastern Divisions, though plantations are rapidly spreading in other districts, particularly the South-Eastern, North-Eastern, and Western. The total area planted was 35,363 acres, or an average of 164 acres for each plantation. The principal plantation industries entered upon up to the present are cocoanuts, rubber, sisal hemp, and cotton. Secondary agricultural industries are the cultivation of bowstring hemp, coffee, vanilla, kapok, cocoa, tapioca, cinnamon, tea, and tobacco. The natives are compelled by an ordinance to plant cocoanuts for food supply. It is estimated that the total area so planted amounts to 350,000 acres. The following table shews the areas under the different cultures (exclusive of maize and garden products) on 31st March, 1913:—

|  | Acres. |     |     |     |     |        |
|--|--------|-----|-----|-----|-----|--------|
| Cocoanuts                              | ...    | ... | ... | ... | ... | 21,958 |
| Rubber                                 | ...    | ... | ... | ... | ... | 6,256  |
| Hemp                                   | ...    | ... | ... | ... | ... | 3,057  |
| Cotton                                 | ...    | ... | ... | ... | ... | 609    |
| Other cultures (including fruit trees) | ...    | ... | ... | ... | ... | 3,483  |
| Total                                  | ...    | ... | ... | ... | ... | 35,363 |

(iii.) *Government Plantations and Experimental Stations.* There are five Government plantations of cocoanuts and Pará rubber, with a total area under cultivation of 733 acres. New Government plantations are being developed by five annual loans of £5000

each from the Commonwealth. During 1912-13, a total area of 649 acres was planted under this scheme.

Sylvicultural nurseries have been established in connection with the plantations with the object of supplying settlers with seeds and plants, which have been imported from the East and West Indies, Central America, tropical Australia, Ceylon, the Malay States, and the Solomon Islands. At the experimental stations, the suitability of soil and climate for different products is tested and correct methods of cultivation demonstrated. Large quantities of plants and seeds have been distributed to planters. A Government orchard, for supplying fresh fruit and vegetables, has been established at one of the experimental stations, and yields considerable quantities of European fruit-foods.

(iv.) *Indigenous Products.* There are many indigenous plants of great economic value. These comprise sandalwood and other timber trees, sugar-cane, cotton plants, rubber-both, vine, nutmegs, ginger, bamboos, palms, bananas, bread-fruit, edible nuts, sago-palms, fruits, and vegetables.

3. **Live Stock.**—On 31st March, 1913, the live stock in the territory consisted of 483 horses, 10 donkeys, 1727 head of cattle, 109 mules, 99 sheep, 974 goats, 421 pigs, and 10,129 fowls. A Government stud farm has been established for the breeding of horses. Twenty-nine stud mares have been imported. A valuable asset to the stud is the possession of two stallions of good breeding. 31 foals have been dropped at the farm. The introduction of rabbits, foxes, hares, and monkeys is prohibited.

4. **Forest Products.**—There is a large variety of useful timbers in Papua. Of 120 varieties that have been catalogued, 16 are adapted to resisting heavy strains, and are suitable for girders, railway waggons, etc.; 10 for railway carriage and coach building; 15 for joinery, lining, flooring, etc.; 14 for butter boxes; 5 for boat building; 4 for piles; and 15 for cabinet work. Sandalwood is indigenous. It is largely used for cabinet work, and santal oil is distilled from its roots. Ebony is also produced for export. Rubber is a promising industry. There are considerable areas of native rubber (*Ficus Rigo*), but the planters generally prefer the imported Pará rubber. Guttapercha is obtained from species of *palaquium*, which grow on the hills. Drugs, dyewoods, and spices are also obtained from indigenous plants. Saw mills have been established, but the output has not been sufficient to supply the local demand for building and other timber, and large quantities of sawn timber have been imported from Australia. About 53,500 feet of timber were exported in 1912-13, valued at £340. Contracts have been made by residents to ship timber to Great Britain.

5. **Fisheries.**—Pearl-shell fishing occupies an important place in the industries of Papua. A considerable number of luggers is licensed, but the returns are mostly credited to Queensland, whose boundary approaches to within a few miles of the Papuan coast. The species of tortoise which supplies the commercial tortoise-shell is also a native of the territory. Bêche-de-mer is found along the shores and reefs. There is a dugong fishery on the coast of the Western Division. The value of fisheries exports in 1912-13 was £20,000.

6. **Mining.**—(i.) *Variety of Minerals.* Minerals have been discovered in many places, and over an extremely wide range. Those discovered so far are—gold, copper, silver, tin, lead, zinc, cinnabar, iron, osmiridium, gypsum, manganese, sulphur, graphite, and petroleum. The discovery of the last named mineral is regarded as important, and steps are being taken to establish the industry. Petroleum of good quality has been secured at Vailala. Of precious stones, only the topaz and beryl have been obtained. Large beds of apparently good coal also exist. A geologist was added to the Government service at the beginning of the year 1911.

(ii.) *Gold.* In 1888 the first gold was discovered. The search has now spread over every division, and finds have been recorded wherever the explorers have gone. Prospecting parties are subsidised by the Government. There are 137 white miners and

761 indentured labourers; the majority of the whites are working the Murna goldfield. The quantity and value of the gold yield for five years are given below:—

**GOLD YIELD, PAPUA, 1908-9 to 1912-13.**

| 1908-9.   |        | 1909-10.  |        | 1910-11.  |        | 1911-12.  |        | 1912-13.  |        |
|-----------|--------|-----------|--------|-----------|--------|-----------|--------|-----------|--------|
| Quantity. | Value. | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. | Quantity. | Value. |
| ozs.      | £      | ozs.      | £      | ozs.      | £      | ozs.      | £      | ozs.      | £      |
| 14,710    | 51,108 | 16,151    | 60,181 | 18,497    | 68,803 | 17,047    | 60,608 | 18,247    | 64,115 |

Most of the rivers, with the exception of those flowing into the Gulf of Papua, have been declared open to gold-dredging, and good yields have been obtained from many of the rivers thus dredged.

The Gold-buyers Ordinance (Ordinance XVIII. of 1909) provides for the issue of licenses to buy gold, and imposes a penalty in respect to the purchase of gold by unauthorised persons. The total quantity of gold won to 30th June, 1913, was 357,831 ounces, valued at £1,291,670.

(iii.) *Copper.* A rich and extensive copper field has been proclaimed, and about 30 square miles of it are being worked. There are indications that the mineral exists over a much wider region. The ore shipments in 1912-13 were the largest since the field was discovered. The total amount shipped to date is 3134 tons, valued at £50,420.

(iv.) *Other Minerals.* Some good samples of galena (sulphide of lead) have been obtained. Small quantities of cinnabar (sulphide of mercury), graphite (or plumbago), osmiridium (or iridosmine), zinc, native sulphur and other minerals are also found.

A mineral laboratory and museum has been fitted up, and is available to prospectors and others interested.

7. **Manufactures.**—The chief native manufactures are pottery, canoes, fishing nets, mats, shell ornaments, stone implements, and decorated gourds.

**§ 6. Statistical Summary.**

1. **Revenue and Expenditure.**—The revenue and expenditure for 1912-13, under principal heads, are given below; also a summary covering a period of five years. In addition to the revenue collected during the year, amounting to £52,335, £39,000 was granted by the Commonwealth Government—£30,000 for ordinary expenditure, £5000 for Government plantations, and £2000 each for new wharfs and new stations. As compared with 1911-12 there were decreases of £4300 in customs receipts, and £1300 in those from the post office. On the expenditure side, increases occurred in all departments, except public works and medical.

**REVENUE OF PAPUA, 1911-12.**

**EXPENDITURE OF PAPUA, 1911-12.**

|                               |                |                                    |                |

| <b>Total ... ..</b>           | <b>£52,335</b> | <b>Total ... ..</b>                | <b>£85,170</b> |

## REVENUE AND EXPENDITURE OF PAPUA, 1908-9 to 1912-13.

| Item.              | 1908-9. | 1909-10. | 1910-11. | 1911-12. | 1912-13. |
|--------------------|---------|----------|----------|----------|----------|
|                    | £       | £        | £        | £        | £        |
| Revenue ... ..     | 27,706  | 35,918   | 45,972   | 51,035   | 52,335   |
| Expenditure ... .. | 51,036  | 64,874   | 70,699   | 85,636   | 85,170   |

2. **Imports and Exports.**—The value of imports and exports for five years is shewn in the table below. The figures for 1907-8 and 1908-9 evidenced considerable expansion in trade over former years. Those for 1909-10 shewed an advance over 1908-9 of £25,497 in imports, and £20,907 in exports. In 1910-11 imports increased nearly 70 per cent. over the previous year, exports nearly 17 per cent. In the following year the imports increased 16 per cent.; exports decreased 14 per cent. In 1912-13, there was a falling off in imports; but a great expansion, amounting to nearly 30 per cent. over the previous year, in exports.

## VALUE OF IMPORTS AND EXPORTS OF PAPUA, 1908-9 to 1912-13.

| Particulars.       | 1908-9. | 1909-10. | 1910-11. | 1911-12. | 1912-13. |
|--------------------|---------|----------|----------|----------|----------|
|                    | £       | £        | £        | £        | £        |
| Imports ... ..     | 94,680  | 120,177  | 202,910  | 235,369  | 218,323  |
| Exports ... ..     | 79,692  | 100,599  | 117,410  | 99,990   | 128,016  |
| Total trade ... .. | 174,372 | 220,776  | 320,320  | 335,359  | 346,339  |

The principal articles of import are foodstuffs, which in 1912-13 reached a total value of £67,109. The chief other imports in that year were:—Drapery and clothing, £32,897; hardware and ironmongery, £22,972; building material, £17,828; tobacco and cigars, £12,577; machinery, £17,082; wine, spirits, and beer, £6888; live stock, £5338; oils and kerosene, £5577. The most notable increases over the previous year are:—Machinery, about £8000; and drapery and clothing, £5000. In the years under review gold has formed considerably more than half the value of the total export, except in 1912-13, when it was slightly less than half. In 1912-13 the value of this metal exported reached £62,332. Other principal exports were:—Copra, £16,912; copper ore, £18,997; pearls, £9284; pearl and turtle shell, £8842; hemp, £3039; bêche-de-mer, £1871; rubber, £517.

3. **Postal and Shipping.**—Considerable development has been shewn in means of communication—the postal returns, and the tonnage of vessels entered and cleared at ports, having largely increased. Particulars regarding postal matter are given hereunder:

## POSTAL STATISTICS OF PAPUA, 1908-9 to 1912-13.

| Year.       | Letters.  |              | Packets.  |              | Newspapers. |              | Parcels.  |              |

| 1909-10 ... | 64,357    | 56,776       | 8,893     | 5,575        | 52,178      | 21,104       | 1,351     | 379          |
| 1910-11 ... | 84,274    | 83,617       | 13,712    | 8,011        | 63,170      | 25,520       | 2,279     | 542          |
| 1911-12 ... | 124,603   | 97,783       | 23,433    | 5,336        | 88,873      | 36,107       | 2,769     | 949          |
| 1912-13 ... | 136,585   | 111,574      | 23,088    | 5,338        | 112,931     | 37,030       | 2,935     | 1,049        |

The value of money orders issued in 1911-12 was £7449; of those paid, £664. In 1912-13, the respective values were £7166 and £793.

The following table shows the number, tonnage, and nationality of vessels entered and cleared at ports during the years 1908-9 to 1912-13:—

**SHIPPING.—FOREIGN-GOING VESSELS ENTERED AND CLEARED AT PORTS

## § 7. Land Tenure.

1. **Method of Obtaining Land.**—(i.) *The Land Laws.* The broad principles upon which the land laws of Papua are based are:—(a) No land can be alienated in fee simple; (b) the rental of the land leased is assessed on the unimproved value of the land, and is subject to reassessment at fixed periods.

A detailed account of the method of obtaining land was given in Official Year Book No. 6, pp. 1083-4.

(ii.) *The Leasehold System.*—With a view of attracting pioneer settlers, an ordinance was passed in 1906 under which leases were granted on very liberal terms. No rent was payable for the first ten years, the heavy expense of survey was borne by the Government, and no charge was made for the preparation and registration of the leases; that is to say, no payments whatever had to be made to the Government for 10 years. Under this system, the area under lease increased in four years from 2089 acres to 363,425 acres; about 140 plantations were started, and nearly 1000 acres planted during that period.

After allowing free survey for three years, it was decided that all future applicants for agricultural leases exceeding in area 100 acres should be required to pay the cost of survey. It was also found desirable to check a tendency amongst a proportion of land applicants to obtain areas so great that the improvement conditions could not be carried out. It was therefore enacted that no leases should be granted after 1st June, 1910, exceeding 5000 acres in extent, and that rent at the rate of 3d. per acre must be paid from the commencement on all leases exceeding 1000 acres in area. As a result of these enactments, several leases have been forfeited. On the other hand, a stricter enforcement of improvement conditions has resulted in a substantial raising of the standard.

2. **Land Tenures.**—On 30th June, 1913, the lands of the territory were held as follows:—

|                                  | Acres. |     |     |                   |
|----------------------------------|--------|-----|-----|-------------------|
| Area of land held by the natives | ...    | ... | ... | 56,538,569        |
| Area of Crown land...            | ...    | ... | ... | 1,092,800         |
| Area of freehold land            | ...    | ... | ... | 23,295            |
| Area of leasehold land           | ...    | ... | ... | 290,936           |
| <b>Area of territory</b>         | ...    | ... | ... | <b>57,945,600</b> |

Private sales of land in the territory have now practically ceased. The Government buys from the natives, and then leases to planters, who are forbidden to have direct dealings in land with Papuans. The development in leasehold tenures may be seen from the following table:—

**TOTAL AREA HELD UNDER LEASE, 1908-9 to 1912-13.**

| Year ended 30th June.                             | 1908-9. | 1909-10. | 1910-11. | 1911-12. | 1912-13. |
|---|---------|----------|----------|----------|----------|
| Land held under lease ... acres<br>(as recorded). | 337,803 | 363,425  | 364,088  | 332,422  | 290,936  |

In 1912-13, the area of leases granted was 3080 acres; that of leases expired, revoked, and forfeited was 39,171 acres. Further, recent surveys have shewn that applicants for leases in many cases over-estimated the areas; this constitutes a further shrinkage of 5395 acres. Leases of unimproved areas have, after a reasonable time has been allowed in which to make a substantial start in clearing and planting, been forfeited. There has been steady development in agriculture through the adoption of stringent safeguards against purely speculative acquisitions of land. During 1912-13, the area of land acquired by the Crown from the natives was 18,482 acres. Notwithstanding shrinkage in figures quoted, the plantation statistics (see *supra*) indicate that development is rapidly proceeding.

The total area surveyed in the Territory is 22,524 acres of freehold, and 186,450 acres of leasehold.

**§ 8. Progress of the Territory.**

1. **Statistical View of Seven Years' Progress.**—As already stated (§ 2, *supra*) the territory was placed under Commonwealth control on 1st September, 1906. The following table indicates the progress that has been made since that date:—

**STATISTICAL VIEW OF SEVEN YEARS' PROGRESS, 1907-1913.**

| Subject.  | Year ended 30th June. |         |
|---|-----------------------|---------|
|   | 1907.                 | 1913.   |
| White population ... ..   | 690                   | 1,219   |
| Native labourers employed (exclusive of Crown servants) ...     | 2,000                 | 10,000  |
| Number of white civil servants ... ..                           | 65                    | 118     |

\* On 31st March, 1913.

## SECTION XXX.

### PUBLIC HYGIENE.

#### § 1. Introduction.

1. **General.**—Though the safeguarding of the public health as an organised department of administration is of comparatively modern growth, few branches of law have expanded more rapidly than the one relating to that subject. The loss of potential wealth incurred through preventable diseases and deaths is of grave concern to the nation, and is a matter which has recently received an increased amount of attention both from the Commonwealth and State Governments and from the Health and other authorities in Australia. Numerous Acts of Parliament have been passed dealing with various aspects of the subject of public hygiene.

2. **State Legislation.**—In the first place there is a number of statutes, passed by the State Legislatures, such as Public Health Acts, Pure Food Acts, and Milk and Dairy Supervision Acts, providing, *inter alia*, for the constitution of Central Health Authorities, vested with definite powers, and furnishing the machinery necessary to enforce these powers. The general effect of this legislation has been to place local sanitary regulations and the execution of the Acts in the hands of the local authorities, subject to a general superintendence by a Government department.

3. **Commonwealth Legislation.**—Secondly, by the enactment of the Commerce (Trade Descriptions) Act 1905, the Quarantine Acts 1908 and 1912, and the Customs Act 1910, the Commonwealth Government has taken the first steps towards the exercise of its constitutional powers for the protection of the public health. All these Acts are administered by the Department of Trade and Customs.

4. **Scope of Enquiry.**—In addition to the statutes already referred to, account should be taken of a large body of legislation which relates more or less indirectly to the subject of public hygiene. It deals with a great variety of subjects and matters, such as factories, conditions of employment, mines, merchant shipping, prevention of fire, buildings, dangerous performances, contagious diseases, and other matters. There is also a number of statutes which have been passed with the object of protecting and supervising infant life. Owing to exigencies of space it is not possible in this section to do more than give a brief description of the scope and results of the legislation relating to public hygiene in its more important aspects.

#### § 2. The Public Health Acts.

1. **General.**—The most important statutes relating generally to the subject of public hygiene are the Health Acts which have been passed in each State. While the scope of these Acts differs considerably in some of the States, there is a general similarity in their chief provisions and range of operation. The administration of the Acts is carried on by either a Central Board or a Commissioner of Health under Ministerial control while their actual execution is imposed on local Boards of Health or on the local authorities constituted under the various Local Government Acts. Ordinarily the Central authority

has general supervisory powers over local Boards and authorities, and also has power to act in case of default by or in the absence of a local Board or authority as to any duty under the Act, and to recover all expenses incurred. The Central authority may also make regulations, and the central and local Boards may make by-laws for various purposes generally specified in the Health Acts. Generally it may be said that the chief functions of the Central Health authorities are :—(a) the collection and dissemination of useful information relating to health and the prevention of disease, and (b) to control, stimulate, and, where necessary, to supplement the efforts of the local authorities.

Inspectors are sent to make reports on the hygienic conditions of country towns or districts with a view to assisting the local authorities with advice, and keeping the central department posted as to the activity or otherwise of these various bodies.

Rating powers for sanitary purposes are conferred on local authorities by the Local Government Acts.

The general powers of local authorities under the Acts extend to a variety of subjects and matters, including :—sewers and drains, sanitary conveniences, scavenging, cleansing, privies and cesspools, abatement of nuisances generally, offensive trades, public buildings, dwelling-houses and lodging-houses, hospitals, mortuaries, cemeteries and burial grounds, prevention of adulteration of food and drugs, unsound food, pollution of water, supervision of abattoirs and dairies, prevention of infectious diseases, and infant life protection.

**2. New South Wales.**—The Department of Public Health is controlled by the Director-General of Public Health, and consists of various staffs—medical, bacteriological, chemical, veterinary, dairy inspection, meat inspection, sanitary, pure food, and clerical.

The work of the Department, briefly put, embraces all matters relating to public health and the general medical work of the Government; the Director-General of Public Health also holding the position of Chief Medical Officer of the Government. Its operations extend over the whole of the State.

The Board of Health has certain statutory duties imposed upon it by various Acts of Parliament, and the Director-General is President of the Board of Health. These duties consist largely in supervision of the work of local authorities (Municipal and Shire Councils), so far as that work touches upon public health matters connected with the following Acts :—Public Health Act 1902, Dairies Supervision Act 1901, Noxious Trades Act 1902, Cattle Slaughtering and Diseased Animals and Meat Act 1902, Sydney Abattoir and Nuisances Prevention Act 1902, Pure Food Act 1908, and Private Hospitals Act 1908. The Board further possesses certain powers connected with public health matters under the Local Government Act 1906.

The Director-General of Public Health acts independently of the Board of Health as regards the State hospitals and asylums, and the various public hospitals throughout the State which receive subsidies from the Government.

It may be mentioned that the Board of Health is a nominee Board, created in 1881 and incorporated in 1894. The permanent head of the Department is the Under-Secretary of the Chief Secretary's Department.

The Department also controls, on behalf of the Federal Government, the meat export trade of the State. A veterinary inspector is in charge, and has assisting him an assistant veterinary inspector and thirty-five qualified meat inspectors stationed at Glebe Island and at various slaughter-houses throughout the State.

**3. Victoria.**—In this State the Public Health Acts are administered by a Board composed of two members nominated by the Governor-in-Council and of seven members elected by the municipal councils. The medical and sanitary staffs of the Board consist of (a) the medical inspector, who is also chairman, (b) two assistant medical inspectors, (c) two engineering inspectors, (d) three building inspectors, and (e) nine health inspectors. The main function of the Board is to enforce the execution of the Health

Acts by the local municipalities, but it has been found advisable to supplement this supervisory function by an active policy of inspections as to the sanitary condition of various districts and the sampling of articles of food. The supervision of the sanitary condition of the milk supply is under the Dairy Supervision Branch of the Department of Agriculture. Acts administered by the Department of Public Health are:—The Health Acts, the Cemeteries Acts, the Cremation Act 1903, the Adulteration of Wine Act 1905, the Meat Supervision Acts, and the Pure Food Act 1905.

**4. Queensland.**—The Public Health Acts 1900 to 1911 are administered by the Commissioner of Public Health under the Home Secretary. The executive staff of the Department includes a health officer, an assistant-health officer, a medical inspector for North Queensland, a secretary and five clerks, nine sanitary inspectors, and six food inspectors, in addition to rat squads in Brisbane and the main outports, and a mosquito squad for the Brisbane metropolitan area. A northern office, in charge of the medical inspector for North Queensland, is located at Townsville. A laboratory of microbiology and pathology, in charge of a medical director, is controlled by the Department, and performs a wide range of microbiological work for the assistance of medical practitioners and the Department.

One function of the Department is to stimulate and advise local sanitary authorities on matters pertaining to the Health Acts, and, where necessary, to rectify or to compel rectification, at the cost of the local authority, of sanitary evils produced by local inefficiency or apathy. Its powers and responsibilities were widely increased by the Health Act of 1911, which, *inter alia*, enables definite action to be taken against mosquitoes, rats, and other noxious vermin liable to spread disease.

A scheme for the limitation of venereal disease in the metropolitan area has been recently put into operation in Brisbane under statutory powers. It includes compulsory notification, free treatment, and the free supply of salvarsan and allied remedies to all public-hospitals. Compulsory segregation of venereally infective persons of either sex may be effected on occasion.

**5. South Australia.**—The Central Board of Health in South Australia consists of five members, three of whom (including the chairman) are appointed by the Governor, while one each is elected by the city and suburban local Boards and the country local Boards. The Health Act 1898 provides that the municipal and district councils are to act as local Boards of Health for their respective districts. There are 180 of these local Boards under the general control and supervision of the Central Board. A chief inspector and two inspectors under the Health, Food, and Drugs Acts, periodically visit the local districts and see generally that the Boards are carrying out their duties. There is also a chief inspector of food and drugs (under the Food and Drugs Act 1908), who, in company with an analyst, visits country districts, and takes samples of milk, which are analysed on the spot. There are two nurse inspectors employed in advising and assisting local Boards in connection with outbreaks of infectious diseases. In the outlying districts there are eleven inspectors directly responsible to the Board. The Education Department has a medical officer and two female inspectors, who deal with all cases of infectious disease occurring in schools, while their appointments under the Health Act enable them to trace cases of such disease, and deal, if necessary, with the sanitary state of the children's homes.

**6. Western Australia.**—The legislation in this State is The Health Act 1911, with two Amending Acts 1912. The central authority is the Department of Public Health, controlled by a Commissioner, who must be a qualified medical practitioner. The local authorities constitute:—(a) Municipal Councils, (b) Road Boards which may be appointed as such, (c) Local Boards of Health, composed of persons appointed by the Governor for a certain period. These Local Boards are only utilised where neither Municipal Councils nor Road Boards are available. Generally speaking, the Act is administered by the local authorities, but the Commissioner has supervisory powers, also power to compel local authorities to carry out the provisions of the Act. In cases of emergency the Commissioner may exercise all the powers of the local health authorities throughout the State.

All the usual provisions for public health legislation are contained in the Act, and in addition, provision is made for the registration of midwifery nurses, and the medical examination of school children.

**7. Tasmania.**—The Public Health Act 1903 vests central control in the Chief Health Officer, who is the permanent head of the Department of Public Health. He is charged with very wide functions and powers, and in the event of the appearance of dangerous infectious disease (smallpox, plague, etc.) in the State, is vested with supreme power, the entire responsibility of dealing with such an outbreak being taken over by him from the local authorities. Local executive is vested in local authorities, who possess all legal requirements for the efficient sanitary regulation of their districts. Controlling and supervisory powers over these bodies are possessed by the Department of Public Health, whereby many of the powers conferred upon them may be converted into positive duties. One function of the Department is to advise local authorities on matters pertaining to the Health Act, and, where necessary, to rectify sanitary evils produced by local inefficiency or apathy. The department has four full-time inspectors, who assist and instruct the local sanitary inspectors, but full-time district health officers are not provided for. The number of local authorities under the Public Health Act has been reduced to fifty-one since the Local Government Act 1906 came into force. All parts of Tasmania are now furnished with the administrative machinery for local sanitary government.

### § 3. Inspection and Sale of Food and Drugs.

**1. Introduction.**—The importance of securing a pure and wholesome supply of food and drugs is recognised by both the Commonwealth and State Parliaments. Under the Acts referred to later, and the regulations made thereunder, the importation of articles used for food or drink, of medicines, and of other goods enumerated, is prohibited, as also is the export of certain specified articles, unless there is applied to the goods a "trade description" in accordance with the Act. Provision is made for the inspection of all prescribed goods which are imported, or which are entered for export.

**2. Commonwealth Jurisdiction.**—Under Section 51 (i.) of the Commonwealth Constitution Act 1900, the Commonwealth Parliament has power to make laws with respect to trade and commerce with other countries and among the States. By virtue of that power, the Commerce (Trade Descriptions) Act 1905, and the Customs Act 1910, with reference has already been made in another part of this book (see pp. 513, 514), were passed.

**3. State Jurisdiction.**—The inspection and sale of food and drugs is also dealt with in each State, either under the Health Acts or under Pure Food Acts. There is, in addition, in the several States, a number of Acts dealing with special matters, such as the adulteration of wine and the supervision of meat. The sanitary condition of the milk supply is also subject to special regulations or to the provisions of special Acts.

(i.) *General Objects of Acts.* The general objects of the Acts dealing with the inspection and sale of food and drugs are to secure the wholesomeness, cleanliness, and freedom from contamination or adulteration of any food, drug, or article, and for securing the cleanliness of receptacles, places, and vehicles used for their manufacture, storage, or carriage. The sale of any article of food or any drug which is adulterated or falsely described is prohibited, as also are the mixing or selling of food or drugs so as to be injurious to the health. A more detailed account of the various State Acts and of their administration and enforcement is given in previous issues of the Year Book (see No. 6, p. 1090).

(ii.) *Inspection and Analysis.* Power is given to any authorised officer to enter any place for the purpose of inspecting any article intended to be used as a food or drug and also to inspect articles being conveyed through the streets, by water or by rail. He may take samples for examination or analysis, and may seize for destruction articles which

are injurious to health or unwholesome. Chemical analyses and bacteriological examinations are made by qualified officers. Special provision is generally made in the Acts with regard to the sale of preservatives and disinfectants.

(iii.) *Advisory Committees.* In New South Wales, Victoria, and South Australia Advisory Committees have been appointed for the purpose of prescribing food standards and for making recommendations generally with a view to carrying out the provisions of the Acts. The duty of enforcing these regulations is entrusted to the local authorities, but it is stated that up to the present comparatively few of the local councils seem to have realised the importance of guarding the food supplies of the people.

**4. Food and Drug Standardisation.**—With the object of securing uniformity of food and drug standards of the principal manufactured products sold in the Commonwealth, a conference, which was attended by representatives of the Commonwealth and all the individual States except Western Australia, was opened in Sydney on 8th June, 1910. The result of this conference was that several adoptions of standards of food and drugs, and labelling of articles for consumption were made, so as to obtain uniformity in the several States. In June, 1913, a second conference of the principal Health Officers of the Commonwealth and States was held in Melbourne. Emphasis was laid on the importance of fixing uniform standards throughout the Commonwealth for food and drugs, and of also securing uniformity of administration of the laws relating thereto. It was also urged that, as the uniform enforcement of standards throughout the Commonwealth depends to a great extent on the methods of analysis, the Commonwealth and State analysts should prepare standard methods for determination of the chemical standards adopted. The resolutions of the conference were submitted to the Premiers' Conference held in Melbourne in March, 1914, when it was determined to introduce uniform legislation or regulation with respect to the preparation and distribution of food and drugs.

## § 4. Milk Supply and Dairy Supervision.

**1. Introduction.**—Milk is pre-eminently the food which needs most careful protection at each successive stage of its production, carriage, storage, and delivery, from exposure to infection from extraneous matter. The problem of obtaining a pure and clean milk supply has accordingly, during the last few years, demanded an increasing amount of attention from the Health authorities, and in each State special laws and regulations have been passed governing the supervision of dairy farms and dairies.

(i.) *General Provisions of Acts and Regulations.* In general, it may be said that it is not lawful to sell or offer for sale any milk which is not fresh or wholesome, or which has been watered, adulterated, reduced, or changed in any respect by the addition of water or any other substance, or by the removal of cream. Regulations made under the Acts provide for the carrying-on of dairy farms, dairies, factories, and creameries, under proper and wholesome conditions; and supervisors and inspectors are appointed to enforce these provisions. Generally, the execution and enforcement of the Acts is left to the local authorities.

(ii.) *Registration of Dairymen and Milk Vendors.* Dairymen, milk vendors, and dairy-factory or creamery proprietors are required, under penalty, to be registered. In some States registrations must be applied for before commencing to trade; in other States they must be applied for within a specified time after the premises are first used.

(iii.) *Inspection of Premises.* Dairy inspectors employed by the central departments traverse the principal dairying districts, and inspect dairy premises, dairy herds, appliances, and utensils, and ascertain in what fashion the various local authorities carry out the duties imposed on them. Regulations and instructions are issued by the central departments for the information and guidance of local authorities, dairymen, milk vendors, and others, as to precautions to be observed in order to protect milk from contamination, and to ensure cleanliness as to the structural arrangements, dimensions, and ventilation of premises, and as to the care and health of dairy cattle. If an inspector

is satisfied that any premises or apparatus used therein are unclean, or unfit for the purposes of dairy produce, he may require the owner to put the same in a proper and wholesome condition.

(iv.) *Notification of Diseases.* Every dairyman or milk vendor is required to report immediately any case of certain prescribed infectious diseases occurring in any human being engaged at or residing on his premises. It is the duty of the local authority to take care that communication between all persons belonging to the infected household and the milk business in all its details is prevented. Cases of notifiable diseases occurring in animals at a dairy farm or dairy must also be reported immediately, and the owner must at once isolate the diseased animal. The sale of milk from an infected cow is prohibited, and, under certain circumstances, an inspector may order an infected animal to be branded or destroyed.

(v.) *Analysis of Dairy Produce.* The local authority generally has power to enter premises and to take away samples of the milk, cream, butter, or cheese there found, and of the water supply therein, for the purpose of examination or analysis.

**2. Number of Dairy Premises Registered.**—The following table shews the number of dairy premises registered and the number of cattle thereon in each State during the year 1912-13:—

**NUMBER OF DAIRY PREMISES REGISTERED AND CATTLE THEREON, 1912-13.**

| Particulars.            | *N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust.* | Tas.   |
|-------------------------|---------|-----------|---------|----------|-----------|--------|
| Premises registered ... | 18,524  | 14,365    | 12,021  | 918      | 298       | 856    |
| Cattle thereon ...      | 631,576 | 147,857   | 336,154 | 6,970    | 4,686     | 11,668 |

\* New South Wales for 1911-12, Western Australia for calendar year 1913.

**3. New South Wales.**—The provisions of the Dairies Supervision Act 1901 extend to the whole of the Eastern and Central Divisions of this State and to all important dairying districts further inland. Other districts are brought under the operation of the Act by proclamation from time to time. Every dairyman, milk vendor, and dairy factory or creamery proprietor is required, under penalty, to apply for registration to the local authority for the district in which he resides, and also to the local authority of every other district in which he trades. Registrations must be applied for before commencing to trade and must be renewed annually.

**4. Victoria.**—The inspection and supervision in Victoria of dairies, dairy farms, dairy produce, milk stores, milk shops, milk vessels, dairy cattle, and grazing grounds are provided for by the Milk and Dairy Supervision Act 1905, administered by the Minister of Agriculture. Under the Health Act 1890 and the Pure Food Act 1905, however, the Department of Public Health is empowered to take samples of food (including milk, cream, butter, cheese, and other dairy products) for examination or analysis, to institute prosecutions in case of adulterated or unwholesome food, and to carry out inspection of dairies, etc., in districts not yet proclaimed under the Act. By the end of the year 1913, 108 municipal districts, comprising about one-fourth of the area of the State, had been brought under the operation of the Milk and Dairy Supervision Act. The municipal councils have the option of carrying out the execution of the Act themselves or of electing for execution by the Department of Agriculture; up to the present all the municipalities in which the Act has been proclaimed have elected for Departmental execution.

**5. Queensland.**—The control and supervision of the milk supply and of dairies and the manufacture, sale, and export of dairy produce in Queensland are provided for by the Dairy Produce Acts 1904 and 1911, administered by the Department of Agriculture and Stock. These Acts and the regulations made thereunder apply only to prescribed

districts, which comprise the whole of the coastal district from Rockhampton down to the New South Wales border, and the Darling Downs, Maranoa, Mackay, and Cairns districts.

**6. South Australia.**—The Food and Drugs Act 1908, and the Regulations made thereunder (published in May, 1910), provide for the licensing of vendors of milk and the registration of dairies, milk stores and milk shops. The Metropolitan County Board carries out the requirements of the metropolitan area. In the country, the majority of local authorities have not made statutory provision for the licensing of vendors of milk and the registration of dairy premises; and, in consequence, the Central Board of Health provides for such under the Act. Reference has already been made (see § 3, 5 hereof) to the constitution of the Metropolitan County Board.

**7. Western Australia.**—Control of dairies throughout the State is in the hands of the Public Health authorities under the provision of the Health Act. The inspectors under the Act supervise all sanitary conditions of the premises, the examination of herds being carried out by officers of the Department of Agriculture. This inspection of herds is regularly done, and in the case of such animals as arouse suspicion, the tuberculin test is applied. Regular inspection of premises from a sanitary point of view is also maintained.

**8. Tasmania.**—Local authorities are responsible for the dairies in their respective districts. By-laws for the registration and regulation of dairies have been drafted by the Public Health Department, and in the majority of cases have been adopted by the local authorities. By the Food and Drug Act, which came into force March, 1911, milk sampling is carried out by the local authorities. During 1913, attention was drawn by circular to the requirements of local authorities with regard to dairies, and a special report is now required before licenses are granted.

## § 5. Prevention of Infectious and Contagious Diseases.

**1. General.**—The provisions of the various Acts as to precautions against the spread and the compulsory notification of infectious diseases may be conveniently dealt with under the headings—(a) Quarantine; (b) Notifiable Diseases; and (c) Vaccination.

**2. Quarantine.**<sup>1</sup>—Under the Commonwealth Quarantine Act 1908, the systems of State quarantine formerly in operation were abolished, and a branch of the Department of Trade and Customs, under the immediate control of a Director of Quarantine, was created on 1st July, 1909. An amending Quarantine Act was passed in 1912, correcting certain imperfections in the original Act, and conferring additional powers. As far as is at present practicable, uniformity of procedure has been established throughout the Commonwealth in respect of all vessels, persons, and goods arriving from overseas ports or proceeding from one State to another, and in respect of all animals and plants brought from any place outside Australia. In regard to interstate movements of animals and plants, the Act becomes operative only if the Governor-General be of opinion that Federal action is necessary for the protection of any State or States; in the meantime the administration of interstate quarantine of animals and plants is left in the hands of the States.

(i.) *Transfer of Quarantine Stations.* The transfer from the States to the Commonwealth of the quarantine stations, for the purposes of human quarantine, at the following places has been effected:—(a) *New South Wales.* North Head (near Sydney). (b) *Victoria.* Point Nepean (near Melbourne). (c) *Queensland.* Colnslie and Lytton (near Brisbane), Magnetic Island (near Townsville) and Thursday Island. (d) *South Australia.* Torrens Island (near Adelaide). (e) *Western Australia.* Woodman's Point (near Fremantle), Albany, and Broome. Animal quarantine stations in each of the States have also been transferred, and steps are being taken for the taking over by the Commonwealth of other stations. New buildings and improvements are in course of construction at several of the transferred stations.

---

1. From information furnished by the Federal Director of Quarantine.

(ii.) *Administration of Act.* Co-operation between the Commonwealth and State authorities is secured as far as practicable in the administration of the Act, arrangements having been made by which, under the Director of Quarantine, the State Health Departments of Western Australia and Tasmania administer in those States the division of the Act relating to vessels, persons and goods (general quarantine), the Chief Medical Officer of the Department in each case acting as chief quarantine officer. Payment is made for these services to the State Government. In New South Wales, Queensland, and South Australia, this division of the Quarantine Act is administered by a Commonwealth medical chief quarantine officer, while in Victoria, where the Central Administrative Office is situated, this division is directly administered by the Director of Quarantine. The administration of the Acts and regulations relating to oversea animal and plant inspection and quarantine is also carried out by the officers of the State Agricultural Department acting as quarantine officers. Power to take action for the prevention of the spread of disease within a State still remains in the hands of the State, and as the functions of the Commonwealth and State may be exercised at the same time, the advantage of co-operation is apparent.

(iii.) *Chief Provisions of Act.* The Act provides for the inspection of all vessels from oversea, for the quarantine, isolation, or continued surveillance of infected or suspected vessels, persons, and goods, and for the quarantining and, if considered necessary, the destruction of imported goods, animals, and plants. The obligations of masters, owners, and medical officers of vessels are defined, and penalties for breaches of the law are prescribed. Power is given to the Governor-General to take action in regard to various matters by proclamation, and to make regulations to give effect to the provisions of the Act. Quarantinable diseases are defined as small-pox, plague, cholera, yellow fever, typhus fever, leprosy, or any other disease declared by the Governor-General, by proclamation, to be quarantinable. "Disease" in relation to animals means certain specified diseases, or "any disease declared by the Governor-General by proclamation to be a disease affecting animals." "Disease" in relation to plants means "any disease or pest declared by the Governor-General by proclamation to be a disease affecting plants." The term "plants" is defined as meaning "trees or plants, and includes cuttings and slips of trees and plants and all live parts of trees or plants and fruit."

(iv.) *Proclamations.* The proclamations so far issued specify the diseases to be regarded as diseases affecting animals and plants; appoint first ports of landing for imported animals and plants and first ports of entry for oversea vessels; declare certain places beyond Australia to be places infected, or as places to be regarded as infected with plague; prohibit the importation (a) of certain noxious insects, pests, diseases, germs, or agents, (b) of certain goods likely to act as fomites, and (c) of certain animals and plants from any or from certain parts of the world; and fix the quarantine lines in certain ports of Australia.

(v.) *Regulations.* Regulations have been made prescribing the quarantine signal; the hours of clearance of vessels; forms of notices, orders, reports, and bonds to be used by masters, medical officers, quarantine officers, and importers; the period of detention of vaccinated and unvaccinated persons in quarantine; the conditions of removal of goods and mails; the method of disinfection of persons, animals, and infected or suspected articles; the conditions under which certain animals not prohibited may be imported; the sustenance charges for quarantine animals; the conditions of importation of hides, skins, wool, hair, bones, and animal manure; the method of carrying out the quarantining, disinfection, fumigation, and treatment of plants and packages. Regulations have also been made with the object of preventing the ingress to and the egress from vessels of rats and mice, and for the destruction of rats, mice, and other vermin.

(vi.) *General.* The procedure has already been greatly simplified. Instead of all oversea vessels being examined in every State, as was formerly the case, those arriving from the south and west are now examined only at the first port of call and pratique is given for the whole of the Commonwealth, except in cases of suspicious circumstances,

while vessels arriving from the northern routes are examined only at the first and last ports. It is expected that the restrictions placed upon oversea vessels will be further removed as the machinery of quarantine is improved. The present freedom from certain diseases which are endemic in other parts of the world, would, however, appear to justify the Commonwealth in adopting precautionary measures not perhaps warranted in the already infected countries of the old world.

**3. Notifiable Diseases.**—Provision exists in the Health Acts of all the States for precautions against the spread and for the compulsory notification of infectious diseases. When any such disease occurs, the Health Department and the local authorities must at once be notified. In some States notification need only be made to the latter body. The duty of giving this notification is generally imposed, first, on the head of the house to which the patient belongs, failing whom on the nearest relative present, and on his default on the person in charge of or in attendance on the patient, and on his default on the occupier of the building. Any medical practitioner visiting the patient is also bound to give notice.

(i.) *Notifiable Diseases Prescribed in each State.* In the following statement those diseases which are notifiable in each State are indicated by a cross:—

#### DISEASES NOTIFIABLE UNDER THE HEALTH ACTS IN EACH STATE.

| Particulars.                         | N.S.W. | Vic.† | Q'land. | S.A. | W.A.‡ | Tas. |

| Relapsing fever ...                  | ...    | ...   | +       | +    | +     | ...  |
| Scarlet fever ...                    | +      | *     | +       | +    | +     | +    |
| Scarlatina ...                       | ...    | *     | +       | +    | +     | +    |
| Septicæmia ...                       | ...    | +     | ...     | ...  | +     | ...  |
| Small-pox ...                        | +      | +     | +       | +    | +     | +    |
| Syphilis ...                         | ...    | ...   | +       | ...  | ...   | ...  |
| Trichinosis ...                      | ...    | ...   | ...     | +    | ...   | ...  |
| Typhoid ...                          | +      | *     | +       | +    | +     | +    |
| Typhus fever ...                     | ...    | +     | +       | +    | +     | +    |
| Whooping cough ...                   | ...    | +     | ...     | +    | ...   | ...  |
| Yellow fever...                      | ...    | +     | +       | +    | +     | +    |

† Those diseases marked with an asterisk in this column have been declared notifiable diseases, while those marked by a cross have been declared "dangerous infectious diseases" under the Public Health Act 1890, and when prevalent in any municipal district may be declared notifiable diseases within such district. ‡ Other diseases enumerated as notifiable under "The Health Act 1911" of this State are bilharzia hæmatobia, pyæmia, and Malta, dengue, low and Colonial fevers. ¶ Thursday Island area only. \*\* Metropolitan area of Brisbane only. †† Under the Leprosy Act 1892. § Chicken-pox has been declared a notifiable disease to render certain its differential diagnosis from Small-pox.

(ii.) *Duties of Authorities.* As a rule the local authorities are required to report from time to time to the Central Board of Health in each State as to the health, cleanliness, and general sanitary state of their several districts, and must report the appearance of certain diseases. Regulations are prescribed for the disinfection and cleansing of premises, and for the disinfection and destruction of bedding, clothing, or other articles which have been exposed to infection. Bacteriological examinations for the detection of plague, diphtheria, tuberculosis, typhoid, and other infectious diseases within the meaning of the Health Acts are continually being carried out. Regulations are provided in most of the States for the treatment and custody of persons suffering from certain dangerous infectious diseases, such as small-pox and leprosy.

(iii.) *New South Wales.* The proclamation and notification of infectious diseases are dealt with in Part III. of the Public Health Act 1902. Special provision is made by that Act for the notification of small-pox and leprosy, and for the custody and treatment of lepers. Many improvements have been effected by the Sydney Harbour Trust (see Section XXVI. hereof, page 891) with a view to generally improving the hygienic condition of the area under its control, and especially with the object of preventing the introduction of bubonic plague. Special reports dealing with the etiology of outbreaks of plague have been published.

(iv.) *Victoria.* Under Part VIII. of the Public Health Act 1890, the notification of small-pox, cholera, plague, yellow fever, and other prescribed malignant, infectious, or contagious diseases is compulsory. An amending Act, passed in 1907, requires medical practitioners and registrars to report all cases of notifiable diseases coming under their notice in any proclaimed district, and not merely those cases which occur in the district in which the practitioner or registrar is resident.

(v.) *Queensland.* Under Part VII. of the Health Act 1900, all cases of infectious diseases must be notified; special provision is made for notification of cases of phthisis and small-pox. A report on plague in Queensland for a period covering eight successive years—1900 to 1907—has been published by the Commissioner of Public Health. Apart from the statistical data collected and collated, the report deals exhaustively with the medical, preventive, administrative, and epidemiological aspects of the plague, as observed in Queensland. Plague hospitals are provided at Maryborough, Bundaberg, Gladstone, Mackay, Townsville, and Cairns. Provision is also made for the diagnosis of leprosy, and lepers are sent to Peel Island, Moreton Bay.

(vi.) *South Australia.* In this State cases of infectious diseases must be reported to the local Board, under the provisions of Part VIII. of the Health Act 1898. The onus of notification is placed primarily on the head of the family, and, failing him, the nearest relative, the person in charge, or the occupier of the house; in any case, notification must be given by the medical practitioner attending.

(vii.) *Western Australia.* Regulations made under the Health Act 1898 provide for the compulsory notification to local Boards of infectious diseases. The local Board must report to the Central Board. The necessity for providing hospital treatment for infectious cases has been recognised by the Boards of Health, and in several instances wards for the treatment of these cases have been erected.

(viii.) *Tasmania.* Provisions regarding the prevention and notification of infectious diseases are contained in the Public Health Act 1903, as amended in 1908.

4. *Vaccination.*—In the State of New South Wales there is no statutory provision for compulsory vaccination, though such exists in all the other States of the Commonwealth. With the exception of Victoria, the Vaccination Acts are, however, not generally enforced. The Calf Lymph Depot of the State of Victoria was transferred to the Commonwealth in October 1911. It is now designated "The Commonwealth

Vaccine Dépôt" and is under the control of the Director of Quarantine. Lymph is prepared in this dépôt to meet the requirements of the Quarantine Service and of all the States. A considerable demand exists for lymph in the State of Victoria, where infantile vaccination is compulsory, but in the other States the normal requirements are small. During the quarter July to September, 1913, more than 500,000 doses of lymph were issued from the dépôt. This output was, however, abnormal, and was due to the epidemic of small-pox which broke out in Sydney at the end of June, this being followed by large numbers of vaccinations in each State. The following table shews, so far as particulars are available, the number of persons vaccinated in each State from 1908 to 1913 inclusive:—

NUMBER OF PERSONS VACCINATED IN EACH STATE, 1908 to 1913.

| Year. | N.S.W.* | Victoria.† | Q'land. | S. Aust. | W. Aust. | Tasmania. |
|-------|---------|------------|---------|----------|----------|-----------|
| 1908  | 42      | 20,924     | †       | 1,502    | 616§     | †         |
| 1909  | 11      | 21,344     | †       | 1,477    | †        | †         |
| 1910  | 280     | 21,575     | †       | 1,800    | †        | †         |
| 1911  | 20      | 20,562     | †       | 1,431    | †        | †         |
| 1912  | ...     | 21,548     | †       | †        | †        | †         |
| 1913  | 520,000 | 24,562     | 33,500  | †        | 12,000   | 3,204     |

\* By Government medical officers only.  
see (ii.) below. † Returns not available.

† Children only, who were vaccinated under the Act.  
§ Notifications of vaccinations to district registrars

(i.) *New South Wales.* Although there is no provision for compulsory vaccination in this State, public vaccinators have been appointed. A fee is paid, and free lymph is provided. The large number of vaccinations in 1913 was due to an epidemic of small-pox in New South Wales, 1069 cases of the disease being recorded.

(ii.) *Victoria.* Compulsory vaccination is enforced throughout the State, under Part IX. of the Health Act 1890. From the year 1873 up to the present time it is estimated that 72 per cent. of the children whose births were registered have been vaccinated. Free lymph is provided. As a result of the small-pox epidemic in New South Wales it is estimated that, exclusive of the vaccinations of children given in the above table, about 40 per cent. of the adult population were vaccinated or re-vaccinated in 1913.

(iii.) *Queensland.* Although compulsory vaccination is provided for in this State, under Part VII. of the Health Act 1900, only one remote district has been proclaimed under the Act. In the early part of 1912, the Queensland Government sent a medical expedition to the islands in Torres Straits. Over 1200 natives were vaccinated with a view to reducing the risk of the introduction of small-pox from New Guinea. As a result of the small-pox epidemic in Sydney, approximately 33,500 people were vaccinated in Queensland during 1913.

(iv.) *South Australia.* The Vaccination Act 1882, which applies to South Australia and the Northern Territory, is enforced by the vaccination officer of the State and by the Police Department. Under this Act vaccination was compulsory, but in 1901 an Act to abolish compulsory vaccination was passed. This latter Act was subsequently amended, and the present law is that no parent is liable to any penalty if, within 12 months from the birth of the child, he makes a declaration that he conscientiously believes that vaccination would be prejudicial to the health of the child, and within seven days thereafter delivers the declaration to the vaccination officer. It is estimated that about 15 per cent. of the children born are vaccinated.

(v.) *Western Australia.* In this State vaccination is compulsory under the Vaccination Act 1878, which, however, remains almost a dead letter. Under the Health Act 1911, however, a "conscientious objection" clause was inserted, which is availed of by the majority of parents, so that the number of children vaccinated is very small. All district medical officers are public vaccinators, but they receive no fee for vaccinations. Owing to the outbreak of small-pox in Sydney during 1913, it is estimated that not less than 12,000 children and adults were vaccinated in that year.

(vi.) *Tasmania.* All infants in Tasmania are nominally required, under the Vaccination Act 1898, to be vaccinated before the age of 12 months, unless either (a) a statutory declaration of conscientious objection is made, or (b) a medical certificate of unfitness is received. The Act has not been enforced, and up to June, 1913, practically no vaccination of infants had been performed since the small-pox outbreak in Launceston in 1903, when 66 cases occurred with 19 deaths. During that year 24,857 were vaccinated in Tasmania. In 1913, owing to the outbreak of small-pox in New South Wales, there were 3204 cases of vaccination by public vaccinators.

## § 6. Transmission of Disease by Mosquitoes.

1. *Introduction.*—The remarkable development of parasitology in recent years and the increase in knowledge of the part played by parasites in human and animal diseases have shewn that the difficulties in the way of tropical colonisation, in so far as these arise from the prevalence of diseases characteristic of tropical countries, are largely removable by preventive and remedial measures. Malaria and other tropical diseases are coming more and more under control, and the improvements in hygiene, which science has accomplished, lend an entirely new aspect to the question of white settlement in countries formerly regarded as unsuitable for colonisation by European races. In Australia the most important aspect of this matter is at present in relation to such diseases as filariasis, malaria, and dengue fever, which, although practically unknown in the southern States, are of common occurrence in many of the tropical and sub-tropical parts of the Commonwealth.

2. *Queensland.*—The existence of filariasis in Queensland was first discovered some thirty-three years ago. The parasite of this disease (and probably of dengue fever also), is transmitted by *Culex fatigans*, the mosquito most prevalent in Queensland. The *Stegomyia fasciata*, conveyer of yellow fever, is another common domestic mosquito throughout Eastern Queensland during the summer, but so far has never been infected from abroad. Occasional limited outbreaks of malaria occur in the northern parts of the State; one at Kidston, in 1910, resulted in 24 deaths. The infection was traced to newcomers from New Guinea. For many years several efforts were made to deal with the mosquito question in the larger centres, but, owing to the absence of the statutory powers, these had only limited success. Special provisions of the Health Act Amendment Act of 1911 remedied this defect, and extensive operations, involving oiling, drainage, tank screening, the use of larvivorous fish, and other measures have been organised by the Department of Public Health. The metropolitan local authorities contributed £420 towards the undertaking for the first year. Some 50,000 square yards of natural breeding places are attended to weekly by a special mosquito squad, over 2000 street gullies are oiled, and tank screening with fine wire gauze is being steadily enforced on owners and occupiers. The work is continued through the winter, in order to reach the eggs and larvæ at their period of lowest vitality. The Department's inspectors have also received a course of training in insect destruction, with a view to enabling the introduction of yellow fever or other insect-borne epidemic disease to be promptly and effectively met.

3. **Northern Territory.**—While the Territory is conspicuously free from most of the diseases which cause such devastation in other tropical countries, a certain amount of malaria exists, and, although no deaths can be attributed to this disease during 1912, the Administrator is taking measures for the destruction of mosquito larvæ wherever settlements or permanent camps are formed, while precautions are being taken to prevent the collection of stagnant water in such localities.

4. **Other States.**—In Western Australia it is stated that malaria is not known to exist south of the 20th parallel, while filaria has not been discovered at all. No mosquito-borne diseases are known to exist in Victoria, South Australia or Tasmania, and it is stated that filariasis is uncommon in New South Wales, the only cases known being imported ones. Kerosene and petroleum have been successfully used to destroy mosquitoes at various places in these States, both by municipalities and private individuals.

## § 7. Supervision of Infant Life.

It has been frequently stated in recent years that when the social, climatic, and industrial conditions are taken into consideration, the infantile mortality of Australia, particularly in the large towns, is much higher than it should be. It is now generally recognised, however, that infant mortality is largely attributable to parental ignorance and neglect, and that, in particular, improper feeding is accountable for perhaps the majority of infant deaths. In all the States of the Commonwealth, Acts have been passed with the object of generally supervising the conditions of infant life and of reducing the rate of infantile mortality, and in many of the large towns measures have been adopted by private individuals to spread among the mothers a knowledge of the best methods of feeding and caring for their infants. Milk Institutes have also been established after the manner of the *Gouttes de Lait*<sup>1</sup> in Europe, with the object of reducing the number of deaths of infants from milk poisoning in the summer months. Reference has been made in a previous part of this book (see page 169) to the number of infantile deaths and the rates of infantile mortality in each State, and it will be convenient to here shew corresponding particulars for the year 1913, classified according to metropolitan and other districts in each State:—

### INFANTILE DEATHS AND RATES OF INFANTILE MORTALITY FOR METROPOLITAN AND OTHER DISTRICTS, 1913.

| Districts                      | N.S.W. | Victoria. | Queensland. | S.A.  | W.A.  | Tasmania. | C'wealth. |
|--------------------------------|--------|-----------|-------------|-------|-------|-----------|-----------|
| NUMBER OF INFANTILE DEATHS.    |        |           |             |       |       |           |           |
| Metropolitan                   | 1,635  | 1,335     | 415         | 499   | 347   | 107       | 4,338     |
| Other ...                      | 2,424  | 1,202     | 835         | 384   | 301   | 309       | 5,462*    |
| RATES OF INFANTILE MORTALITY.† |        |           |             |       |       |           |           |
| Metropolitan                   | 78.90  | 76.48     | 78.98       | 78.49 | 83.93 | 80.81     | 78.52     |
| Other ...                      | 77.04  | 64.70     | 57.67       | 61.24 | 59.20 | 67.73     | 67.87     |

\* Including 7 in Commonwealth territories. † i.e., the number of deaths of infants under one year of age per thousand births.

1. Organised action in this direction commenced in 1894 in Belgium. The original Belgian Society is known as the "*Société des Gouttes de Lait*." The movement has become an international one, and branches of the Society have been founded all over Europe. Similar philanthropic work was commenced in the United States of America before 1894.

It may be seen that in each State the rates of mortality are higher in the metropolitan than in other districts. The causes of "preventable" deaths may generally be attributed to milk poisoning, want of knowledge on the part of mothers, inability to nurse, and lack of the necessary medical facilities.

The figures in the above table do not, however, completely represent the hygienic aspect of the question. For every infant death recorded there are probably three or four survivors who have sustained more or less serious permanent physical damage, quite apart from injuries at birth or congenital causes. It is stated that the far-reaching influence of the first year or two of life upon the whole subsequent physical welfare of the individual cannot be recognised too clearly, and it has been alleged that many serious defects and diseases occurring in later life may be credited to results ensuing from infantile disease. This is particularly the case in respect of digestive diseases.

The conditions regulating the employment of boys and girls in shops and factories are referred to in the section of this book dealing with *Industrial Unionism and Industrial Legislation* (Section XXVII.). Certain particulars have also been given in Section XXIV. (pages 821 to 823) of this book regarding Orphanages, and Industrial and Reformatory Schools in Australia. In previous issues of this book a short account has been given of the principal Acts which have been passed in each State dealing with the subject of child-life, and of the principal functions of the States' Children's Departments. (See Year Book No. 6, p. 1101).

## § 8. Medical Inspection of State School Children.

1. **Introduction.**—For many years medical officers of health and many others concerned in education generally have, from time to time, suggested the desirability of a medical inspection of school children. The State, which enforces school attendance under penalties, is also under the obligation of securing a satisfactory hygiene for the child during such attendance. Moreover, efficiency in education demands several things, viz., that the conditions under which the studies are made shall be physically and hygienically satisfactory; that there shall be no undue concentration of nervous effort on school work, and that the child shall be reasonably safeguarded against infection, etc. Only by an adequate scheme of medical supervision can these results be attained.

Several limited and isolated surveys of the physical proportions of Australian children have been made during the past 30 years in the various States. The first important systematic survey, however, was made in Sydney in 1901, and the results were reported by the Government Statistician of New South Wales to the Australasian Association for the Advancement of Science Conference in Hobart in 1902, and shewed that the Sydney boy was taller than the English boy, but that his chest expansion was small in comparison with European figures.

A series of measurements on 500 boys took place concurrently but independently in Hobart during 1901, which also gave similar results. It was recognised that the figures were based on limited numbers, but they at least challenged attention. The 1901 survey in Sydney, though small, was a valuable and suggestive contribution to anthropometric research in Australia, and may be regarded as the beginning of a systematic attempt to ascertain what characteristics of bodily form are exhibited in Australia. This inquiry roused considerable interest in the other States, and series of measurements have since been made in Western Australia, Tasmania, and South Australia, by various authorities, and in Victoria by the Education Department's medical officers. Each year since 1907 the Department of Education of New South Wales has carried out regular anthropometric measurements of the height and weight of school children, and now possesses records of about 90,000 children, the results being detailed in the Department's annual reports. A card for each child allows his measurements for successive years to be recorded. The department perambulated the apparatus, each set serving about 20 schools, and the visits recur in the same month of each succeeding year.

**2. Co-ordination of Effort.**—So far as it has been carried out, the medical inspection of school children goes to shew that in Australia, as in other lands, the hygiene, both of the schools and of the pupils therein, is more defective than is ordinarily recognised, and that not only preventable physical injury to the rising generation from school conditions can be avoided, but also instruction itself can be made more efficient by a proper regard to the demands of a good school hygiene. With a view to securing uniformity of procedure in the several States the Commonwealth Government in 1907 formulated a scheme and communicated with the States asking their co-operation in obtaining measurements of school children with a view to establishing the relations between age, weight and height, chest measurement, etc. Delays occurred from various causes, but in a paper read at the Science Congress in Sydney in 1911, the subject was again brought under notice, and this led to the appointment by the congress of a committee of experts to encourage anthropometric research and to consider the organisation of a systematic survey of school children throughout Australia. The scheme was essentially identical with the former proposal of the Federal Government, but in the interim the report of the British Anthropometric Committee became available, thus making possible a method uniform with that of Great Britain, and making the results immediately comparable with those of Europe.

The Australian Anthropometric Committee has drawn up a memorandum setting forth the importance and object of the survey, and suggestions as to method for the use of teachers, physical trainers and others interested.

A description of the proposed survey will be found in previous issues of the Year Book (see No. 6, p. 1104).

On the coming into operation of the Defence Act of 1910, military training became compulsory in the Commonwealth, and advantage has been taken of the prescribed medical examination to make a systematic record of the height, weight and chest measurement of each trainee. There can be no doubt that these anthropometric records will in time furnish valuable data for the study of Australian physical development. Further reference is made to this subject in the section dealing with "Defence."

**3. New South Wales.**—In this State, arrangements were made in May, 1907, for the medical inspection of school children in Sydney, and later in the year the work was extended to Newcastle. Two inspectors were appointed for the first year's work, and a third in March, 1909.

In 1913, the scheme of school medical inspection was re-organised so as to embrace every pupil in the State whose parents desired such medical inspection of their children. The employment of part-time Medical Officers was discontinued, and a staff consisting of a Principal Medical Officer and nine full-time Medical Officers was appointed. It was decided to extend the medical inspection of school children to such non-State schools as were agreeable. To cope with this extra work, two additional full-time Medical Officers were added to the staff at the end of the year. Attached to the staff are also five school nurses and six clerks. The work now being carried on by the Medical Branch may be classified under the following heads:—

(1) The medical inspection of all school children (except about 10,000), in the State, whether attending public or non-State schools; (2) The investigation of epidemics of infectious diseases affecting school children; (3) Inspection of school buildings; (4) Delivering of systematic courses of lectures at the training college; (5) Delivering lectures to the senior girls in all metropolitan schools on the care of babies, personal cleanliness, home hygiene, sick nursing, etc.; (6) Delivering lectures to parents; (7) The medical examination of candidates for admission to the teaching service; (8) Giving first treatment in the back country schools to the eyes of scholars suffering from ophthalmia, and instructing the children and parents regarding future treatment and prevention;

also supplying those children with sufficient drugs to carry on the treatment; (9) Visiting the parents of defective children by nurses to better secure the treatment of those children.

Owing to the staff being employed in vaccinating some 24,000 scholars and teachers during the small-pox epidemic in Sydney, the inauguration of the new scheme was delayed. During the few months in which the scheme was in operation, 25,638 children were examined, of whom 15,135, or 59 per cent., shewed defects needing treatment. Of these the principal were adenoids and enlarged tonsils, and defects in teeth and vision.

4. **Victoria.**—In Victoria three medical inspectors have been appointed by the Education Department, and a commencement was made towards the end of 1909 by the examination of the pupils attending the Melbourne Continuation School. An Advisory Committee was also appointed to formulate a scheme of medical inspection, which it is proposed to extend to all State schools in Victoria. During the year 1909-10 the chief work of the inspectors consisted in carrying out a preliminary investigation of the health of the pupils in various schools in town and country. During the year ending 30th June, 1911, many of the ideas and intentions outlined in the previous Annual Education Report were initiated, and the foundation laid for a proper and systematic scheme of medical school instruction in future. In the year 1912-13, 12,439 children were examined, of whom 9676 were attending elementary schools. The following table shews the defects and their percentage amongst Victorian boys and girls in the elementary schools examined:—

**VICTORIA.—NUMBER AND PERCENTAGE OF DEFECTS IN SCHOOL CHILDREN, 1912-13.**

| Number<br>of<br>Children<br>Exam'd.                          | PARTICULARS OF DEFECTS. |          |                        |         |       |              |            |                       |        |        |         |       |         |

| Total 9767   | 1,124                   | 1,157    | 1,904                  | 4,849   | 1,398 | 4            | 93         | 35                    | 7      | 80     | 215     | 85    | 55      |
| PERCENTAGE ON TOTAL NUMBER EXAMINED, SUFFERING FROM DEFECTS. |                         |          |                        |         |       |              |            |                       |        |        |         |       |         |
| Boys 4962  | 11.7                    | 16.4     | 23.3                   | 52.8    | 2.0   | 0.1          | 0.5        | 0.3                   | 0.1    | 0.7    | 2.4     | 0.8   | 1.0     |
| Girls 4805   | 11.3                    | 7.1      | 15.6                   | 46.4    | 27.0  | 0.1          | 1.4        | 0.3                   | 0.1    | 0.9    | 2.0     | 0.9   | 0.1     |
| Total 9767   | 11.5                    | 11.8     | 19.5                   | 49.6    | 14.3  | 0.1          | 0.9        | 0.3                   | 0.1    | 0.8    | 2.2     | 0.9   | 0.5     |

5. **Queensland.**—In this State a systematic scheme for the inspection of State school children has recently been prepared and came into operation on 1st January, 1911, under which a Medical Branch of the Department of Public Instruction was created, consisting of a Medical Inspector of Schools, a School Nurse, and a Dental Inspector. To this

staff have been added an Ophthalmic Inspector and two assistant Dental Inspectors. There are in addition five part-time Medical Inspectors. Under the present scheme the children are examined and if found defective, notices are sent to the parents. The children are treated either by their own doctors, or if they cannot afford private treatment, at the hospital. During the year 24,499 examinations were completed. The medical examinations numbered 7856, 2570 being in connection with diphtheria outbreaks; of the remainder, about 32 per cent. received notices referring to physical defects requiring medical attention.

While adenoids appear to be the principal defect throughout all the State schools, the children in the Northern and Western districts suffer largely from defective vision and trachoma. The work of the Ophthalmic Inspector is chiefly confined to these districts. In Cairns and Townsville several cases of ankylostomiasis and anæmia (probably due to the same disease) were found. The report of the Dental Inspector, while still disclosing an appalling percentage of defects in the teeth of the children, shews, even in the short time in which the scheme has been in existence, a marked improvement in the schools that were examined twelve months previously.

In the reports the relation between educational progress or intelligence and physique and nutrition is shewn under the three degrees of comparison, indicated by the words "Good," "Fair," and "Poor." In the following tables the figures given are for 1850 children, being the total examined in five schools :—

**QUEENSLAND.—RELATION BETWEEN INTELLIGENCE OF SCHOOL CHILDREN AND PHYSIQUE AND NUTRITION, 1912.**

| Intelligence. | Number Examined. | Physique. |       |       | Nutrition. |       |       |
|---------------|------------------|-----------|-------|-------|------------|-------|-------|
|               |                  | Good.     | Fair. | Poor. | Good.      | Fair. | Poor. |

**NUMBER OF CHILDREN.**

|          |       |     |     |     |       |     |     |
|----------|-------|-----|-----|-----|-------|-----|-----|
| Good ... | 1,329 | 786 | 444 | 99  | 866   | 333 | 180 |
| Fair ... | 460   | 177 | 204 | 79  | 256   | 132 | 72  |
| Poor ... | 61    | 22  | 29  | 10  | 34    | 16  | 11  |
|          | 1,850 | 985 | 677 | 188 | 1,156 | 481 | 213 |

**PERCENTAGE ON NUMBER EXAMINED IN EACH CLASS.**

|          |       |       |       |       |       |       |       |
|----------|-------|-------|-------|-------|-------|-------|-------|
| Good ... | 1,329 | 59.14 | 33.41 | 7.45  | 65.16 | 25.06 | 9.78  |
| Fair ... | 460   | 38.48 | 44.35 | 17.17 | 55.65 | 28.70 | 15.65 |
| Poor ... | 61    | 36.06 | 47.54 | 16.40 | 55.74 | 26.23 | 18.03 |
|          | 1,850 | 53.24 | 36.60 | 10.16 | 62.49 | 26.00 | 11.51 |

The children examined were also classified according to "intelligence" and "physical condition." This classification is shewn in the following table, and it may be observed that the columns marked with a (x) indicate conditions which are alleged to interfere seriously with the child's school progress. In this table "deafness" does not include the deafness accompanying adenoids, nor does "physical defects" include such as are incidental to adenoids. Excluding the first and last columns, the figures in the table represent individual defects, not individual children.

**QUEENSLAND.—RELATION BETWEEN INTELLIGENCE OF SCHOOL CHILDREN  
AND PHYSICAL CONDITION, 1912.**

| Intelligence.      | Number Examined. | Adenoids. |         |           | Defective Vision.*       |    | Deafness.* | Weak Hearts. | Enlarged Glands. | Anemia. | Physical Defects. | Mental Deficiency. |
|--------------------|------------------|-----------|---------|-----------|--------------------------|----|------------|--------------|------------------|---------|-------------------|--------------------|

| Poor ... | 61    | 45.90 | 19.67 | 9.84  | 6.56 | 4.92 | 6.56 | 6.56 | 47.54 | 21.31 | 57.37 | 8.03 |

\* Normal hearing is assumed to be susceptible to an ordinary whisper over a distance of eighteen feet and is represented by the denominator of a fraction, while its numerator indicates to what this distance has to be reduced in order that the whisper may become intelligible. Visual condition or vision is similarly represented by a fraction, the denominator of which represents the distance in metres (a metre being approximately forty inches) at which normal vision would clearly distinguish an object, while the numerator indicates the reduction in distance required ere the patient attains clear effortless visual perception. Thus  $\frac{1}{2}$  would mean that a person whose eye test was represented by that fraction, could only see an object at six metres distance, which had he possessed normal vision he would have seen at a distance of twelve metres. Normal vision, which is generally tested by Snellen's ordinary test type, is represented by the fraction §.

6. **South Australia.**—South Australia is now the only State which has no medical supervision of its school children, but provision has now been made on the estimates for a medical officer, a dental officer, and two trained nurses. In 1909, at the desire of the Government, Dr. Rogers examined 1000 school-going children in different parts of the State. No children under seven years nor over 15 years of age were examined. Investigations were made with regard to personal appearance, cleanliness, height, weight, chest measurements, teeth, eyesight, hearing, nose and throat, etc., and the report was presented to the Minister for Education in September, 1910, the results being, on the whole, satisfactory. A summary of this report, which contains statistical details exhibiting many interesting comparisons between various States in the Commonwealth and other parts of the world, was given in the previous issue of this book (see vol. No. 5, pp. 1132 to 1138).

7. **Western Australia.**—Until the year 1911, no general scheme for school medical inspection existed in Western Australia, although examination in a few metropolitan schools had been intermittently carried on. During the latter part of 1906 and the first half of 1907 an extended examination of about 3300 children was conducted by the Department of State Medicine and Public Health with the co-operation of the Education Department. Many physical defects among the children were detected, and the co-operation of the Inspector-General of Schools resulted in steps being taken, where possible, to provide better hygienic conditions. The system followed during 1909 was that, wherever possible, a visit was made to a school, the teacher bringing up all children who appeared to be suffering from any physical defects or bodily ailments. The exact condition of the child having been determined, a notice was sent to the parents calling attention to the

necessity of obtaining treatment for the defect. Under the Health Act 1911, Medical Officers of Health become medical officers of schools and school children, and during 1912, taking Government and Private schools together, 135 out of 668 schools were medically inspected, while out of 48,423 children, 11,369 were examined, or about 23.5 per cent. From the figures at present available it appears that about 71.5 per cent. of the children examined were reported as in some way defective, most of the defects being connected with the teeth. Excluding dental defects and uncleanness, the number reported as defective is about 9 per cent.

In the Metropolitan District the members of the Dental Society have carried out a regular system of examination of children's teeth. In connection with this, and also in connection with the general system of medical inspection, free treatment is provided for those children whose parents are unable to pay.

8. **Tasmania.**—The credit of being the first State in the Commonwealth to provide for the medical inspection of schools and school children in a systematic way rests with Tasmania, where, under the direction of the Chief Health Officer and the Director of Education, about 1200 children attending schools in Hobart were inspected in 1906. The general examination was based upon that of the Royal Commission on Physical Training (Scotland) of 1903, but considerable modifications and adaptations were found necessary in order to fit it to immediate requirements. No attempt was made to secure anthropometric observations beyond those of unquestionable medical value, and in only one case (colour of eyes) were any purely anthropological data collected. The sociological data obtained (parental occupation, etc.) were found of much service, and produced some interesting comparative results.

Medical inspection of school children as now existing in Tasmania is carried out by three medical officers, each controlling respectively one of three areas, which for medical inspection purposes are known as Hobart District, Launceston District, and the Country Districts of the State. Additional assistants in the persons of school nurses have been appointed to follow up the work of the Medical Inspectors. Reports on the physical condition of the children are furnished, and parents advised when medical attention is considered necessary, and in the case of parents unable to pay for such attention, orders are given for free treatment at the hospital. During 1912, 2350 children were examined by Dr. Ormiston, who found advanced adenoids and enlarged tonsils affecting 7.4 per cent., defective sight 4.8 per cent., and defective hearing 2.5 per cent. of the children; while Dr. Clark out of 2108 children found that 485, or 23 per cent., were suffering from various defects to an extent requiring medical treatment in order to fit them for their educational studies. Of these 485 children 174 had severe eye defects, and 136 were suffering from advanced adenoids. Out of the 2350 children examined by Dr. Ormiston 11 were found to be mentally deficient in the true sense of the term, while 8 others, though regarded as practically bordering on that condition, were described as unable to profit much by ordinary school methods. With regard to dental condition, all the Medical Inspectors agree that the teeth of the children of Tasmania seem to be uniformly bad.

## SECTION XXXI.

## THE COMMONWEALTH SEAT OF GOVERNMENT.

1. **Introductory.**—In Year Books Nos. 4 and 5 information was given in this section as to the events leading to the selection of the Federal Capital Territory, and as to the necessary legislation and the progress of operations in connection with the establishment of the capital city. The physiography of the Territory was dealt with *in extenso*, and topographical and contour maps accompanied the letterpress, as well as reproductions of the premiated designs for the laying out of the city. Considerations of space, however, preclude the repetition of this information.

2. **Progress of Work.**—The design for the laying out of the capital city having been approved, the ground survey is being proceeded with. The work of laying the water supply pipes from the service reservoir at Mt. Stromlo is in active progress. The clearing operations at the Cotter River for the dam site are nearly completed, while the excavation for the service reservoir, at Red Hill, is practically complete.

The construction of the power house and buildings is approaching completion.

A preliminary brick-making plant has been established, and the construction, metalling and gravelling of 16 miles of road from the City to the junction of the Cotter and Murrumbidgee Rivers have been completed.

The following figures indicate the actual work done in road development during the last two years :—

|  |     |     |     |     |           |
|--|-----|-----|-----|-----|-----------|
| Forming and finishing ...              | ... | ... | ... | ... | 60 miles  |
| Gravelling and metalling ...           | ... | ... | ... | ... | 58 miles  |
| Clearing out, repairing culverts, etc. | ... | ... | ... | ... | 160 miles |
| General road repairs ...               | ... | ... | ... | ... | 147 miles |
| Cutting water tables, drains, etc.     | ... | ... | ... | ... | 111 miles |
| Cotter-road formation ...              | ... | ... | ... | ... | 6 miles   |

Considerable headway has been made in the construction of the Hospital, while the Railway Timber Store is completed and ready for use.

3. **Lands in the Territory.**—As a considerable portion of the Commonwealth lands within the Territory is not required in connection with the establishment of the city, such areas are being made available for leasing under certain conditions. Leases of a purely temporary character will be granted for certain business and residential allotments on the site of the capital city. A scheme is under consideration for subdividing and leasing land outside the City area. It has been decided to lease such lands as are not at present affected by the City development for longer periods than the yearly leases previously authorised, and accordingly alternative tenders are being invited in such cases for two or five-year leases, tenants for the longer period being required to exterminate rabbits, boundary netting being provided by the Commonwealth Government. Reference has already been made on page 274 to the area of alienated, acquired and leased land within the Territory. In this connection it may be added that the precise area of the Territory cannot be accurately determined at present, pending the completion of the survey of the boundary between the Territory and New South Wales.

4. **Lands at Jervis Bay.**—A Bill to provide for the transfer to the Commonwealth of sovereign rights over certain lands, comprising about 18,000 acres, and water, at Jervis Bay, to be used for the Naval College and other Federal purposes, failed to secure the assent of the Legislative Council of New South Wales, and the carrying out of the agreement in this regard between the Governments of Commonwealth and State is consequently delayed for the time being.

The actual area now held at Jervis Bay is 8839 acres, comprising:—

|   |        |             |
|---|--------|-------------|
| (1) Area acquired under the Seat of Government Acceptance Act                   | ...    | 3,488 acres |
| (2) Area compulsorily acquired with consent of Government of<br>New South Wales | ... .. | 5,100 acres |
| (3) Area acquired from private owners   | ... .. | 251 acres   |

Contour, road and boundary surveys have been completed and plans are in course of preparation giving full topographical information over a considerable area.

5. **Railways.**—The permanent survey of the proposed railway from Queanbeyan to the city site having been completed, the line is now under construction. The work on the New South Wales side of the boundary between Territory and State is being carried out by the Railway Commissioner of that State, that within the Territory being carried out by the New South Wales Railways Construction Branch on behalf of the Commonwealth Government. The latter has agreed to repay the outlay to the New South Wales Government with 5 per cent. added. Up to the present 27 miles of line have been surveyed, from the Capital to Bungendore, and also 60 miles from Jervis Bay to a point near the Shoalhaven River.

6. **Educational Facilities.**—As the result of a conference between the Administrator of the Territory and the New South Wales Education Department, it is proposed that the latter shall, for the time being, continue the administration of education in the Territory, the expenditure involved to be refunded annually by the Commonwealth to the State.

7. **Revenue and Expenditure.**—The present revenue from properties within the Territory (including that derivable from rates, which amounts to £2975) is estimated at £5000. The expenditure in the Federal Territory subsequent to the passing of the "Seat of Government Acceptance Act 1909," and up to the 30th June, 1913, was for 1910-11 £20,216, 1911-12 £68,026, and 1912-13 £137,497, making a total of £225,739.

This amount was distributed as follows:—

|   |        |         |
|---|--------|---------|
| Buildings                               | ... .. | £35,310 |
| Power Plant and Power House             | ... .. | 11,956  |
| Electric Supply                         | ... .. | 1,812   |
| Roads and Transport                     | ... .. | 61,999  |
| Water Supply                            | ... .. | 32,368  |
| Sewerage                                | ... .. | 1,733   |
| Materials and Stores                    | ... .. | 17,371  |
| Running Expenses and Miscellaneous      | ... .. | 9,908   |
| Health, Administration, Education, etc. | ... .. | 32,601  |
| Afforestation                           | ... .. | 2,555   |
| Surveys                                 | ... .. | 18,126  |

8. **Military College.**—In June 1911, a Military College was opened at Duntroon for occupation by the cadets and staff. Particulars regarding the establishment of this College may be found in Year Book No. 4 (p. 1159). Previous reference has been made to it in the section of this book dealing with Defence (see page 942).

9. **Naval College at Jervis Bay.**—The Naval College at Jervis Bay is now in course of erection. Pending its completion, the work of the college is being carried on at Geelong, Victoria. For further reference see section of this book dealing with Defence.

10. **Inauguration of the Capital City.**—On the 12th March, 1913, the official ceremony to mark the initiation of operations in connection with the establishment of the Seat of Government was carried out. Foundation stones were laid by the Governor-General, the Prime Minister, and the Minister for Home Affairs. At this ceremony the selection of "Canberra" as the name of the capital city was announced by Lady Denman, the wife of the Governor-General.

## SECTION XXXII.

## THE NORTHERN TERRITORY.

## § 1. Area and Population.

1. **Introductory.**—Upon the extension of New South Wales westward to the 129th meridian in 1827, the Northern Territory was comprised within that colony (see Year Book No. 4, page 16), and in 1863 was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911.

2. **Area and Boundaries.**—The total area of this Territory is 523,620 square miles, or 335,116,800 acres. Its length from north to south is about 900 miles, while its breadth from east to west is 560 miles. Its eastern boundary, dividing it from Queensland, is the 138th meridian of east longitude; and its western boundary, separating it from Western Australia, the 129th meridian. Its southern boundary is the 26th parallel of south latitude, dividing it from South Australia. The northern boundary is the coast line of those parts of the Indian Ocean known as the Timor and Arafura Seas. Near the mouth of the Wentworth River, in the Gulf of Carpentaria, the coast line is met by the eastern boundary; at Cape Domett, near Cambridge Gulf, the western boundary cuts the northern coast line. The length of coast line is about 1040 miles, or 503 square miles of area to one mile of coast line; an exact survey has, however, not yet been made.

3. **Population.**—(i.) *Character.* In 1881 there were 670 Europeans in the Territory, and at the end of 1912 the number was estimated at 1931. The Chinese population, at its maximum during the years of railway construction, 1887 and 1888, has gradually dwindled, the estimate for 1912 being 1246. Japanese, first recorded in 1884, increased up to the year 1898, falling again after five years. The highest recorded population, excluding aborigines, was 7533 in 1888; the estimate for 1912 was 3475. The year 1911 was the first in which the population was dominated by the European race. A thirty years table of population, distinguishing races, will be found on page 1154 of the Commonwealth Official Year Book, No. 4. Subsequent to the Census of 1911, a revision of the estimates, back to 1901, was made. The results are shewn in the following table:—

POPULATION OF NORTHERN TERRITORY (EXCLUSIVE OF ABORIGINES),  
1901 to 1912.

| Year ended<br>31st December. | Male. | Female. | Total. | Year ended<br>31st December. | Male. | Female. | Total. |
|------------------------------|-------|---------|--------|------------------------------|-------|---------|--------|
| 1901 ...                     | 3,999 | 674     | 4,673  | 1907 ...                     | 3,095 | 642     | 3,737  |
| 1902 ...                     | 3,847 | 627     | 4,474  | 1908 ...                     | 2,963 | 609     | 3,572  |
| 1903 ...                     | 3,582 | 652     | 4,234  | 1909 ...                     | 2,927 | 576     | 3,503  |
| 1904 ...                     | 3,514 | 692     | 4,206  | 1910 ...                     | 2,738 | 563     | 3,301  |
| 1905 ...                     | 3,368 | 678     | 4,046  | 1911 ...                     | 2,662 | 586     | 3,248  |
| 1906 ...                     | 3,248 | 656     | 3,904  | 1912 ...                     | 2,854 | 621     | 3,475  |

The census population (3rd April, 1911) was 2734 males, 576 females; total, 3310. The estimate for 31st December, 1912, was 2854 males, 621 females; total, 3475.

(ii.) *Movement of Population.* The following is a summary of movement of population in 1912 (excluding overland migration, which is inconsiderable) :—

#### MOVEMENT OF POPULATION, NORTHERN TERRITORY, 1912.

|                  |     |                   |     |                    |     |
|------------------|-----|-------------------|-----|--------------------|-----|
| Europeans—       |     | Europeans—        |     | Excess—            |     |
| Inwards, oversea | 599 | Outwards, oversea | 385 | Immigration over   |     |
| Births ...       | 17  | Deaths ...        | 29  | emigration ...     | 215 |
| Others—          |     | Others—           |     | Deaths over births | 27  |
| Inwards, oversea | 241 | Outwards, oversea | 240 |                    |     |
| Births ...       | 20  | Deaths ...        | 35  |                    |     |
| Increase ...     | 877 | Decrease ...      | 689 | Net gain ...       | 188 |

The immigration and emigration of the Territory in five-year periods from 1881 to 1910, and for 1911 and 1912, is shewn in the following table :—

#### MIGRATION, NORTHERN TERRITORY, 1881 to 1912.

| Year.   | Immigra-<br>tion. | Emigra-<br>tion. | Year.  | Immigra-<br>tion. | Emigra-<br>tion. | Year.   | Immigra-<br>tion. | Emigra-<br>tion. |
|---------|-------------------|------------------|--------|-------------------|------------------|---------|-------------------|------------------|
| 1881-5  | 3,683             | 3,787            | 1896-  |                   |                  | 1906-10 | 2,559             | 3,125            |
| 1886-90 | 9,208             | 7,250            | 1900   | 2,538             | 2,259            | 1911    | 412               | 440              |
| 1891-5  | 1,958             | 2,353            | 1901-5 | 2,211             | 2,932            | 1912    | 840               | 625              |

(iii.) *The Aborigines.* An account of the Australian aborigines, by Dr. W. Ramsay-Smith, was given in Year Book No. 3 (pp. 153-176). The interior of the continent is the most thickly populated by the natives, but it is believed that they are rapidly dying out. In these regions, remote from contact with other races, the native has maintained his primitive simplicity, and furnishes an interesting subject of study to the anthropologist and ethnologist. At the census of 1911, full-blooded aborigines in the employ of whites, and those who were living in a civilised or semi-civilised condition in the vicinity of European settlements, were enumerated—the males being 743, females 480; total, 1223. It has been estimated that the total black population of the Territory is upwards of 20,000.

## § 2. Legislation and Administration.

1. *Transfer to Commonwealth.*—(i.) *The Northern Territory Acceptance Act.* A short historical sketch is given in Year Book No. 6, pp. 1113-4. On 1st January, 1911, the Territory was transferred by South Australia to the Commonwealth, upon terms previously agreed upon by the respective cabinets, and ratified by the Commonwealth *Northern Territory Acceptance Act* (No. 20 of 1910). It is enacted that laws and courts of justice remain in operation, powers and functions of magistrates and officials remain vested; estates and interests continue upon the same terms; trade with Australian States is declared free. The Commonwealth assumes responsibility for the State loans in respect of the Territory, paying the interest yearly to the State, providing a sinking fund to pay off the loans at maturity, and paying off the deficit in respect of the Territory. It also purchases the Port Augusta to Oodnadatta railway, and agrees to complete the construction of the transcontinental railway from Port Darwin to Port Augusta.

(ii.) *The South Australian Surrender Act.* The State Act approves and ratifies the agreement surrendering the Territory.

(iii.) *The Northern Territory (Administration) Act 1910.* The Act provides for Government authorising the appointment of an administrator and officials. South Australian laws are declared to continue in force as laws of the Territory and certain Commonwealth Acts to apply. Power is given to the Governor-General to make Ordinances having the force of law.

(iv.) *Administration.* A Resident Administrator, vested with supreme authority in internal affairs, was appointed in the Department of the Minister for External Affairs in February, 1912. Many other important administrative offices have also been filled.

(v.) *Legislation.* The main provisions of the Ordinances passed are as follows:—The powers and duties of the Administrator vested in the appointee, include custody of the public seal, appointment and suspension of officials, and execution of leases of Crown lands. He is assisted by a council of advice, not exceeding six, and meeting monthly. A Supreme Court with original and appellate jurisdiction is instituted, the method of appointment of the Judge is prescribed, and provision is made for trial by jury, and for the registration and summoning of jurors. A Sheriff, a Registrar-General, and a Health Officer are provided for, also the registration of births, marriages and deaths, and of deeds and documents. District Councils are authorised to assess land values and levy rates on unimproved value. Custody and control of aborigines with extensive powers of supervision are vested in the Chief Protector. Birds protected during the year, and during part of the year, are scheduled. Crown lands are classified, and their mode of acquisition, entry and holding defined. Shop assistants are to have a weekly half-holiday, and the establishments must be closed at a certain time. Mining is encouraged by the provision of rewards for the invention of new processes, and the discovery of valuable deposits and of new mineral fields; subsidization of the industry and the issue of prospecting licenses are also provided for. Licences to search for mineral oil, and leases of land for the working of the industry are available. A Board is constituted for the purpose of making advances to settlers who intend to improve and stock their holdings, to purchase farm implements, plant, etc., or to pay off mortgages, the rate of interest and terms of repayment being set out.

### § 3. Physiography.

1. **Tropical Nature of the Country.**—The Territory is within the torrid zone, with the exception of a strip  $2\frac{1}{2}$  degrees wide, which lies south of the Tropic of Capricorn.

2. **Contour and Physical Characteristics.**—The low flat coast line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl, and ironstone form the occasional cliffy headlands. The sea frontage of more than 1000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries.

The principal features of the coast line are enumerated in Year Book No. 1, p. 66; the rivers in Year Book No. 2, p. 76; the mountains in Year Book No. 3, p. 67; the lakes in Year Book No. 4, p. 77; the islands in Year Book No. 5, pp. 71, 72, and the mineral springs in Year Book No. 6, p. 65.

Inland, the country is generally destitute of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the 17th or 18th parallel of south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea, and those that form the scanty supply of the interior systems. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

### § 4. Climate, Flora and Fauna.

1. **The Seasons.**—There are two main climatic divisions—the wet season, November to April; and the dry season, May to October; with uniform and regular changes of season. Nearly the whole of the rainfall occurs in the summer months. Fuller particulars will be found in Year Book No. 6, p. 1116.

2. **Fauna.**—The ordinary types of native Australian fauna inhabit the territory. As elsewhere on the continent, the higher *Theria* are rare, but marsupials, birds, crocodiles, fresh-water tortoises, snakes (mostly non-venomous), and frogs abound. There are many varieties of freshwater fish and littoral mollusca. Butterflies and beetles are strongly represented. The white ant is a pest, anthills in the Territory sometimes attaining great dimensions. Mosquitoes and sandflies are very troublesome, particularly in the wet season. Native fauna are in some cases protected. The domesticated animals have been introduced, and buffalo also exist in large herds.

3. **Flora.**—The vegetation is tropical, many of the forms belonging to the Malayan and Oceanic regions. The timber trees are not of great commercial value, but in the coastal regions tropical vegetation grows luxuriantly to the water's edge. On the wide expanses of plain country of the interior, there is little vegetation. The principal orders represented in the Territory are:—*Euphorbiaceæ*, *Compositæ*, *Convolvulacæ*, *Rubiaceæ*, *Goodenoviaceæ*, *Leguminosæ*, *Urticæ*.

Fuller particulars regarding fauna and flora are given in Year Book No. 6, pp. 1116-7.

### § 5. Production.

There is no great home consumption of the articles produced in the Territory, the greater part being exported overseas and to the States of the Commonwealth.

1. **Stock.**—The spacious, well-grassed “runs” of the Territory are suitable for horse and cattle breeding. It is anticipated that the cattle trade with the East will develop. Large numbers are overlanded to neighbouring States, which also take considerable quantities of horse hides. The number of stock on 31st December, 1912, was:—

#### LIVE STOCK, NORTHERN TERRITORY, 31st DECEMBER, 1912.

| Horses. | ... | Cattle. | ... | Sheep. | ... | Higs. |
|---------|-----|---------|-----|--------|-----|-------|
| 18,392  |     | 405,552 |     | 75,808 |     | 1,500 |

Dairying as an industry is not developed. The abundant indigenous herbage is, however, well suited for stock, and the making of hay and ensilage would ensure a progressive industry. A dairy factory is proposed at Daly Farm.

2. **Mining.**—Considerable quantities of the precious and commercial metals are mined. The discovery of gold and tin in various localities, and the measure of success that has attended their working, indicate scope for development.

(i.) **Mineral Production.** Both alluvial and reef gold are found, and there are several batteries and cyanide plants. Other minerals are also raised. The following table shows the total mineral production for the last five years:—

#### VALUE OF MINERAL PRODUCTION, NORTHERN TERRITORY, 1908 to 1912.

| Year.    | Gold.  | Tin Ore. | Wolfram. | Silver Lead Ore. | Copper Ore. | Smelter Product (C'p'rBase) | Total Value. |
|----------|--------|----------|----------|------------------|-------------|-----------------------------|--------------|
|          | £      | £        | £        | £                | £           | £                           | £            |
| 1908 ... | 23,943 | 35,876   | 1,925    | 30               | 5,413       | 2,555                       | 70,042*      |
| 1909 ... | 24,148 | 32,741   | 4,105    | ...              | 1,400       | 2,342                       | 64,736       |
| 1910 ... | 21,711 | 31,113   | 6,686    | ...              | 1,196       | ...                         | 60,706       |
| 1911 ... | 30,910 | 22,900   | 4,048    | ...              | 1,470       | ...                         | 59,353†      |
| 1912 ... | 20,150 | 27,001   | 3,330    | 820              | 3,998       | ...                         | 55,299       |

\* Includes bismuth valued at £300.

† Includes bismuth valued at £25.

(ii.) *Employment of Miners, 1908 to 1912.* The following table shews employment in mining for five years, distinguishing Chinese:—

**MINERS, NORTHERN TERRITORY, 1908 to 1912.**

| Year. |     |     |     | Europeans. | Chinese. | Total. |
|-------|-----|-----|-----|------------|----------|--------|
| 1908  | ... | ... | ... | 150        | 674      | 824    |
| 1909  | ... | ... | ... | 190        | 630      | 820    |
| 1910  | ... | ... | ... | 140        | 602      | 742    |
| 1911  | ... | ... | ... | 101        | 575      | 676    |
| 1912  | ... | ... | ... | 84         | 542      | 626    |

(iii.) *Mining Accidents, 1900 to 1912.* In 1911 five mining accidents were recorded, four resulting in death. There were no serious accidents in 1910 and 1912. During the nine years preceding (1901-1909), nine fatal accidents and seven cases of serious injury were recorded. The majority of the victims were Chinese.

3. *Pearl Shell.*—In 1884 mother-of-pearl shell was discovered in the harbour of Port Darwin. Difficulty in working, principally through heavy tides and muddy water, retarded the development of the industry for many years. Latterly, however, the opening up of new patches has led to a revival. In 1912, thirty boats were engaged, valued, with their equipment, at about £10,000; 180 men were employed. Sixty-four tons of pearl shell were obtained, valued at £16,113. Bêche-de-mer valued at £1757 was also raised.

**§ 6. Commerce and Shipping.**

1. *Trade.*—The following table shews the total trade of the Territory for 10 years from 1901 to 1910:—

**VALUE OF IMPORTS AND EXPORTS, NORTHERN TERRITORY, 1901 to 1910.**

| —           | 1901.   | 1902.   | 1903.   | 1904.   | 1905.   | 1906.   | 1907.   | 1908.   | 1909.   | 1910.   |
|-------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
|             | £       | £       | £       | £       | £       | £       | £       | £       | £       | £       |
| Imports     | 108,886 | 107,217 | 125,244 | 113,461 | 86,878  | 74,659  | 78,906  | 68,905  | 57,994  | 52,398  |
| Exports     | 302,931 | 191,558 | 178,266 | 235,650 | 216,279 | 254,222 | 345,721 | 241,023 | 278,555 | 269,063 |
| Total Trade | 411,817 | 298,775 | 303,510 | 349,111 | 303,157 | 328,881 | 424,717 | 309,933 | 336,549 | 321,461 |

No record is now kept of the direction of trade between the Commonwealth States and Territories. It is, therefore, impossible to give the total imports and exports of the Northern Territory for years later than 1910. In 1911 the imports from places outside Australia were valued at £16,920, an increase of £3966 on the previous year. The exports to overseas countries were valued at £48,468, a decrease of £12,983 as compared with 1910. In 1912 imports were valued at £18,130; exports at £59,106.

From 1881 to 1910, the annual average trade in five-year periods was:—

**VALUE OF IMPORTS AND EXPORTS, NORTHERN TERRITORY, 1881 to 1910.**

| Period.   | Average Annual Imports. | Average Annual Exports. | Period.   | Average Annual Imports. | Average Annual Exports. |
|-----------|-------------------------|-------------------------|-----------|-------------------------|-------------------------|
|           | £                       | £                       |           | £                       | £                       |
| 1881-1885 | 125,600                 | 92,727                  | 1896-1900 | 127,489                 | 158,978                 |
| 1886-1890 | 236,099                 | 113,156                 | 1901-1905 | 108,337                 | 224,937                 |
| 1891-1895 | 109,704                 | 177,463                 | 1906-1910 | 66,590                  | 277,718                 |

2. *Shipping.*—The Territory's overseas commerce is carried in British and Japanese bottoms. One of the British lines maintains a monthly service, other lines are irregular. Coastal shipping is chiefly in Australian vessels. The following table shews the shipping of the Territory:—

## SHIPPING, NORTHERN TERRITORY, 1881 to 1912.

| Period.            | Arrivals.       |          | Departures.     |          |
|--------------------|-----------------|----------|-----------------|----------|
|                    | No. of Vessels. | Tonnage. | No. of Vessels. | Tonnage. |
| 1881—1885 (Annual  | 72              | 71,814   | 72              | 71,692   |
| 1886—1890 Average) | 95              | 94,452   | 103             | 94,724   |
| 1891—1895 "        | 75              | 81,128   | 73              | 81,090   |
| 1896—1900 "        | 71              | 88,284   | 70              | 88,244   |
| 1901—1905 "        | 63              | 93,751   | 63              | 91,556   |
| 1906—1910 "        | 87              | 128,502  | 88              | 128,408  |
| 1911 ...           | 71              | 130,178  | 71              | 130,178  |
| 1912 ...           | 74              | 138,052  | 74              | 138,052  |

## § 7. Internal Communication.

1. **Railways.**—Under the agreement ratified by the Act the Commonwealth is to construct the Northern Territory portion of the transcontinental railway line (connecting Adelaide and Darwin, *via* Port Augusta).

The Northern line from Adelaide terminates at Oodnadatta, about 100 miles south of the southern boundary of the Territory. The only line at present in the Territory is one from Darwin to Pine Creek, a length of 145½ miles, of 3 ft. 6 in. gauge; and Pine Creek is distant about 1140 miles from Oodnadatta. The extension of this line southwards from Pine Creek to Katherine River is being proceeded with. It is stated that this trans-continental railway would bring London within seventeen days of Adelaide. The Commonwealth also acquired on 1st January, 1911, the property in the line from Port Augusta to Oodnadatta; but the line is at present being worked under the control of the South Australian Railway Commissioner, by agreement between the Commonwealth and South Australian Governments.

2. **Posts.**—The principal mail services are as follows:—

(i.) *Marine.* Postal communication is maintained between Sydney, Melbourne, and Adelaide, *via* North Queensland ports. The service extends to China and Japan. There are three lines of service—two of the shipping companies being British, and one Japanese. The two former are subsidised at poundage rates, the latter at Postal Union rates. One of the British services is monthly, the others are irregular. There is also a quarterly contract service between Darwin and Boroloola, calling half-yearly at Roper River; and a service every two months between Darwin and Wyndham, on the estuary of Ord River, in the north-east of Western Australia. These are subsidised according to agreement for three years, the amount for the first service being £350; and for the second, £125 per voyage.

(ii.) *Inland.* Posts are also despatched into the interior of the Continent. One route is from the Katherine Telegraph Station southwards as far as Renner Springs, and then eastwards to Anthony Lagoon, where the Queensland mailman is met. The service is maintained with difficulty, on account of the many hardships caused by the alternations of extreme drought and flood.

Other inland routes are served, and there is a frequent service in Darwin.

3. **Telegraphs.**—The transcontinental telegraph line, covering a length of 2230 miles, was completed on 2nd August, 1872, at a cost of nearly half-a-million sterling. The line runs in a northerly direction from Adelaide to Darwin, whence telegraphic communication is provided with Asia and Europe, *via* Banjoewangie (Java), Singapore, and Madras.

Between Darwin and Banjoewangie the submarine cable is duplicated.

## § 8. Finance.

1. Revenue and Expenditure, 1912-13.—In the Commonwealth finance statement for 1912-13, separate accounts are given for Northern Territory administration. The following shews the receipts and expenditure for the financial year named:—

## REVENUE AND EXPENDITURE, NORTHERN TERRITORY, 1912-13.

| REVENUE.                          | £       | EXPENDITURE.—cont.                | £       |

| Salaries and contingencies ...    | 10,607  |                                   |         |
| Gaol—                             |         |                                   |         |
| Salaries and contingencies ...    | 2,309   |                                   |         |
| Charitable Institutions—          |         |                                   |         |
| Salaries and contingencies ...    | 4,930   |                                   |         |
| Board of Health—                  |         |                                   |         |
| Salaries ... ..                   | 169     |                                   |         |
| Law Officers—                     |         |                                   |         |
| Salaries and contingencies ...    | 2,513   |                                   |         |
| Marine Office—                    |         |                                   |         |
| Salaries and contingencies...     | 3,679   |                                   |         |

In addition, the following expenditure was made from the Loan Fund during the year:—

|   |          |
|---|----------|
| Redemption of N. T. Loans ... ..        | £71,945  |
| Redemption of Port Augusta Loans ... .. | £168,954 |
| Total ... ..                            | £240,899 |

The Commonwealth received £151,513 from South Australia, being the credit balance of Northern Territory funds, but assumed responsibility for interest on loans and redemptions.

2. **Loans.**—The first loan on Northern Territory account was floated in London in 1876; the nominal amount was £75,000, at 4 per cent., due date 1st January, 1916. The public debt on 30th June, 1913, was £3,359,891. The following is a summary:—

**PUBLIC DEBT, NORTHERN TERRITORY, 30th JUNE, 1913.**

| Principal.<br>£     |     | Rate.<br>% |     | Annual Interest.<br>£ |
|---------------------|-----|------------|-----|-----------------------|
| 27,216              | ... | 3          | ... | 817                   |
| 154,992             | ... | 3½         | ... | 5,425                 |
| 1,798,383           | ... | 3½         | ... | 67,439                |
| 1,379,300           | ... | 4          | ... | 55,172                |
| <hr/>               |     |            |     |                       |
| Total ... 3,359,891 | ... | —          | ... | 128,853               |

**§ 9. Land Tenure.**

1. **Present Policy.**—The system of land settlement in the Territory will be found fully described in the chapter "Land Tenure and Settlement," see pages 241, 242 *supra*. Prior to the transfer of the Territory to the Commonwealth on 1st January, 1911, the sale and occupation of lands were regulated by the South Australian Legislature in Statutes applying particularly to the Territory. Under the Commonwealth Government a complete reorganization is being effected. Two Lands Ordinances of 1912 declare the present land policy and define the conditions. A leasehold system only is provided for and no further alienation of Crown lands is permitted, except in pursuance of existing agreements. A Board, consisting of the Director of Lands, the Director of Agriculture, and the Chief Surveyor, classifies the land and fixes the rents. The land thus classified and appraised is leased in blocks, the maximum areas ranging from 300 square miles of first class pastoral, to 1280 acres of first class agricultural land. The term of pastoral and miscellaneous leases is 21 or 42 years, all other leases are to be in perpetuity, making them almost equivalent to freeholds, but with re-appraisement of rent values every 14 years in the case of town lands, and every 21 years in the case of agricultural and pastoral lands. The conditions are of a very favourable nature, with low rents and elastic conditions of tenure.

2. **Number of Holdings.**—The table on page 242 *supra* shews the total area under lease, licence, and permit in 1901 and in each year from 1908 to 1912. At the latter date 93,838,080 acres were held under pastoral leases and permits; 667 acres under right-to-purchase leases; 378,240 under annual pastoral leases; and 1,924,871 acres under other leases. The other leases include coal and oil permits, 1,664,060 acres; agricultural leases, 8317 acres; mineral leases, 1290 acres; mixed farming permits, 1280 acres; gold leases, 762 acres; tin-dredging permit, 400 acres; and approved applications under the Tropical Products Act 1904 (of South Australia) 20,000 acres.

## SECTION XXXIII.

## LABOUR AND INDUSTRIAL STATISTICS.\*

## § 1. Introductory.

1. **General.**—The field of Australian statistics has recently been extended by the organisation of a Labour and Industrial Branch of the Commonwealth Bureau of Census and Statistics. The functions of this branch are to carry out investigations in regard to what are commonly known as labour and industrial statistics, and the scheme of work provides for systematic investigations into the following matters:—

(a) *Trade Unionism.*—Classification of unions and members by industries; development of unions and members; the law relating to trade unions; economic characteristics of trade unionism; trades and labour councils and federation of unions.

(b) *Wages and Hours of Labour.*—The course of wages; index-numbers shewing relation between wages, prices, etc.; current wages and hours of labour—metropolitan and country—in each State.

(c) *Changes in Rates of Wages and Hours of Labour.*—The amount of the change; the number of workers affected; individual and aggregate effects of changes on amount of wages paid; method by which changes brought about.

(d) *Strikes and Lock-outs.*—Classified according to industries affected; their cause, duration, method of settlement, number affected, and direct and indirect losses; operations under Federal and State Arbitration and Conciliation and Wages Board Acts.

(e) *Unemployment.*—Classified according to industries; seasonal and general fluctuations; index-numbers of employment; average duration of employment; operations of Government Labour Bureaux; effect of non-continuity of employment on earnings; co-operation in international investigations.

(f) *Prices, Fluctuations in Exchange Value of Gold and Cost of Living.*—Import and export values, wholesale and retail prices, and house rents; special investigations for past years; index-numbers; cost-of-living inquiries by household budgets; international comparisons.

(g) *Investigations in regard to Principal Industries in Commonwealth.*—Numbers employed and wages paid; classification of wage-earners according to occupations and wage-groups; comparisons between rates of wages and actual earnings.

(h) *Miscellaneous.*—Reports on state of labour market in various industries and localities; immigration; operations of Labour Bureaux; legal cases affecting labour; industrial accidents; co-operation and co-partnership; review of laws affecting labour in

---

\* In this section it is only proposed to present in summarised form the results of the various investigations which have been made. For more complete information reference may be made to the publications of the Labour and Industrial Branch of this Bureau, viz.:—Report No. 1, "Prices, Price-Indexes and Cost of Living in Australia, 1891 to 1912." Report No. 2, "Trade Unionism, Unemployment, Wages, Prices, and Cost of Living in Australia 1891 to 1912." Report No. 3, "Manufacturing Industries in Australia," and "Labour Bulletins" Nos. 1 to 5. In Appendix No. VIII. to Report No. 1, the theory and technique of the formation of price-index numbers is discussed at some length, while in Appendix No. IX. the question of the establishment of a basis for international comparisons of the exchange value of gold and variations in cost of living is investigated.

Australia and elsewhere; review and analysis of reports issued by Australian, British, American, and Continental European Labour Departments.

(i.) *Special Subjects of Investigation.*—Concurrently with the general inquiries to be conducted by the Branch (as specified above), it is proposed that investigations shall be carried out into special matters. Each of these would extend, if necessary, over a period as long as one or two years, and would deal with such matters as:—Apprenticeship; the working of various laws specially affecting labour; the employment of women and children; industrial education; noxious and dangerous trades; workmen's compensation and social insurance; fluctuations in employment and their effect on the conditions and efficiency of labour; the housing of the working people; the cost of production; the regulation and restriction of output.

2. **Classification of Industries.** For the purpose of tabulating and publishing the results of the investigations which have been made in regard to labour organisations, unemployment, rates of wages, etc., the following industrial classification of trades and occupations has been adopted:—

#### CLASSIFICATION OF INDUSTRIES AND OCCUPATIONS.

|      |  |       |  |
|------|--|-------|--|
| I.   | Wood, Furniture, Sawmill, Timber-workers, etc.           | VIII. | Mining, Quarries, etc.                             |
| II.  | Engineering, Shipbuilding, Smelting, Metal Works, etc.   | IX.   | Railway and Tramway Services.                      |
| III. | Food, Drink, and Tobacco Manufacturing and Distribution. | X.    | Other Land Transport.                              |
| IV.  | Clothing, Hats, Boots, Textiles, Rope, Cordage, etc.     | XI.   | Shipping, Wharf Labour, etc.                       |
| V.   | Books, Printing, Bookbinding, etc.                       | XII.  | Pastoral, Agricultural, Rural, Horticultural, etc. |
| VI.  | Other Manufacturing.                                     | XIII. | Domestic, Hotels, etc.                             |
| VII. | Building.  | XIV.  | Miscellaneous.                                     |

### § 2. Labour Organisations.

1. **Types of Trade Unions in Australia.** The types of trade unions in Australia are very diverse in character, and range from the small independent association to the large interstate organisation, which, in its turn, may be merely a branch of a British or international union. Broadly speaking, there are four distinct classes of labour organisations, viz. :—(i.) the *local independent*, (ii.) the *State*, (iii.) the *inter-State*, and (iv.) the *Australasian or International*, but a number of variations occur from each of these classes. The leading characteristics of each of these types were briefly outlined in Labour Report No. 2 (pp. 7 to 9).

Particulars of number of unions and branches in each State of interstate and central labour organisations have already been given in Section XXVII. hereof (see pages 904 to 907).

2. **Number of Unions and Membership in Industrial Groups, 1912.**—The following table shews the number of unions and members thereof in each State at the end of the year, 1912. The number of unions specified for each State refers to the number of different unions represented in each State; that is to say, interstate or federated unions are counted once in each State in which they are represented, but sub-branches within a State are not counted. In order to avoid disclosing the affairs of individual unions, in cases where there are only either one or two unions in any group in a State, the membership is not given separately,

### NUMBER OF UNIONS AND MEMBERS IN INDUSTRIAL GROUPS IN EACH STATE, 1912.

| Industrial Groups.                      | N.S.W.  | Vic.    | Q'land. | S.A.   | W.A.   | Tas.  | Total.  |
|---|---------|---------|---------|--------|--------|-------|---------|
| NUMBER OF UNIONS.                       |         |         |         |        |        |       |         |
| I. Wood, Furniture, etc. ....           | 4       | 4       | 6       | 4      | 4      | 2     | 24      |
| II. Engineering, Metal Works, etc. .... | 16      | 20      | 9       | 12     | 10     | 4     | 71      |
| III. Food, Drink, Tobacco, etc. ....    | 20      | 18      | 7       | 8      | 12     | 5     | 70      |
| IV. Clothing, Hats, Boots, etc. ....    | 9       | 11      | 3       | 5      | 3      | 2     | 33      |

\* Not available for publication separately; included in State and Commonwealth Totals.

† Incomplete, see footnote.\*

It may be seen that, with the exception of Group XIV., Miscellaneous, the membership is greatest in Group IX., Railway and Tramway Services (56,005 members), followed fairly closely by Group XII., Agricultural, Pastoral, etc., with over 50,000 members. The least important group from the point of view of membership is Group V., Books, Printing, etc., with less than 8000 members. Particulars are also given in Report No. 2 (pp. 11-12) of the number of male and female members of unions and the percentage of such members on the total number of adult wage earners. Information is also given as to the development of trade unionism since 1891. Other tables shew the classification of unions according to number of members and the number of central labour organisations.

### § 3. Fluctuations in Employment and Unemployment.

1. **General.**—In Australia, but few of the trade unions pay any form of unemployment benefit, and consequently accurate and complete records of unemployment are difficult to obtain. For that reason the investigation for past years was advisedly limited to a record of the numbers unemployed at the end of each year. The results are, therefore, subject to certain limitations, inasmuch as they do not take into account variations in employment and unemployment throughout the year due to seasonal activity and other causes.

For the above reasons it is not safe to conclude that the actual percentage returned as unemployed in past years by trade unions at the end of each year is equal to the average percentage unemployed during the year. Nevertheless, for the purpose of making comparisons and shewing tendencies over a period of years, the percentages returned as unemployed, though not exact, are the most satisfactory figures available, and

the average percentages and index-numbers computed for the several States and groups of unions may be taken as denoting the true course of events with substantial accuracy.\*

It may be mentioned that, in order to overcome the difficulties alluded to in regard to seasonal fluctuations, returns as to numbers unemployed have been collected from trade unions each quarter since the beginning of the year 1913.

**2. Number Unemployed in Various Industries, 1891 to 1913.**—The subjoined table shews for each of the years specified :—

- (a) The number of unions for which returns as to unemployment are available.
- (b) The number of members of such unions.
- (c) The number of members unemployed, and
- (d) The percentage of members unemployed on the total number of members of those unions for which returns are available.

The information given in this table obviously does not furnish a complete register of unemployment. In the first place, with the exception of the year 1913, it relates only to the number unemployed at the end of the year (see preceding paragraph hereof), and, secondly, it does not cover more than a part of the industrial field. And attention should here be drawn to the fact that the value of the comparisons which can be made is, to some extent, vitiated by the fact that returns are not available for the same unions throughout. As regards the year 1913, the table on page 996 shews that for most of the important industries, returns are available for a considerable number of unions and members. It is not unlikely, however, that particulars of unemployment are, on the whole, more generally available for those trades in which liability to unemployment is above the average of skilled occupations. Thus the building and engineering industries are heavily represented in the returns, while such comparatively stable industries as railway service are hardly represented at all. On the other hand, unskilled casual labour cannot, in the nature of the case, be well represented in the returns, which relate mainly to skilled workmen.

Thus, for some reasons, the percentage given is likely to be greater, and for other reasons less, than the true average percentage unemployed throughout the country.

**UNEMPLOYMENT.—NUMBER OF UNIONS AND MEMBERS REPORTING, AND NUMBER AND PERCENTAGE UNEMPLOYED, 1891 to 1913.**

| Particulars.      |     |     |     |     | Unions. | Membership. | Unemployed. |             |
|-------------------|-----|-----|-----|-----|---------|-------------|-------------|-------------|

\* Some description of the various methods of testing the state of the labour market may be found in the Board of Trade Memorandum on Industrial Conditions (Second Series). Cd. 2337, 1904, pp. 79 to 125.

See also "Rapport Préliminaire sur la Statistique Internationale du Chômage," M. Louis Varlez, Gand, 1912.

It may be seen that the extent of unemployment was greatest in 1896 and least in 1911. The general trend of the figures shews a decline in unemployment since 1896. In 1912, however, there was an increase of about 0.8 per cent., while the percentage at the end of 1913 shews a slight decrease compared with the previous year. The high percentage for 1891 was largely due, no doubt, to the dislocation of industry following the maritime strike, while the still higher percentage for 1896 may be traced to the prevalent industrial depression, especially in Victoria, caused by the bank failures and the severe droughts. It may be noticed that, though the number of unions reporting in 1896 is the same as in 1891, the number of members shews a large reduction. This indicates that, in time of severe industrial depression, when employment is bad, the members tend to drift away from the unions. Many probably leave their ordinary places of residence in search of work elsewhere.

The accuracy of the above results as an index to the general state of employment among *all* wage-earners in Australia is confirmed by the results obtained from the censuses of 1891, 1901 and 1911, the closeness of the percentages obtained from these two independent sources for the two latter years being remarkable. A comparative table is given in Report No. 2 (p. 18).

**3. Unemployment in Different Industries, 1913.**—The following table shews the percentages unemployed in several of the fourteen industrial groups. Information as to classification of these groups is given in Report No. 2, page 6. It may be observed that for those industries in which unemployment is either unusually stable or, on the other hand, exceptionally casual, information as to unemployment cannot ordinarily be obtained from trade unions. Hence, certain industries such as railways, shipping, agricultural, pastoral, etc., and domestic, hotels, etc., are insufficiently represented in the returns. Particulars are not, therefore, shewn separately for these groups, such returns as are available being included in the last group, "Other and Miscellaneous."

#### UNEMPLOYMENT IN DIFFERENT INDUSTRIES AT THE END OF YEAR 1913.

| Industrial Group.  | Number Reporting. |          | Unemployed. |             |
|--|-------------------|----------|-------------|-------------|
|  | Unions.           | Members. | Number.     | Percentage. |
| I. Wood, Furniture, etc. ...                                   | 19                | 19,450   | 709         | 3.6         |
| II. Engineering, Metal Works, etc.                             | 56                | 32,778   | 2,318       | 7.1         |
| III. Food, Drink, Tobacco, etc. ...                            | 59                | 19,208   | 1,083       | 5.6         |
| IV. Clothing, Hats, Boots, etc. ...                            | 23                | 15,795   | 281         | 1.8         |
| V. Books, Printing, etc. ...                                   | 27                | 8,458    | 210         | 2.5         |
| VI. Other Manufacturing ...                                    | 66                | 19,640   | 1,270       | 6.5         |
| VII. Building ...  | 58                | 26,384   | 1,020       | 3.9         |
| VIII. Mining, Quarrying, etc. ...                              | 25                | 35,707   | 3,141       | 8.8         |
| X. Other Land Transport ...                                    | 15                | 14,320   | 298         | 2.1         |
| IX., XI., XII., XIII. and XIV.,<br>Other and Miscellaneous ... | 117               | 59,467   | 3,100       | 5.2         |
| All Groups ...   | 465               | 251,207  | 13,430      | 5.3         |

From the above figures it may be seen that the degree of unemployment varies considerably in different industries, ranging from 1.8 per cent. in Group IV. (Clothing, Hats, Boots, etc.) to 8.8 per cent. in Group VIII. (Mining, Quarrying, etc.).

4. **Unemployment in each State, 1913.**—Any deductions which can be drawn from the data collected as to the relative degree of unemployment in the several States are subject to certain qualifications (in addition to those already stated on page 995), inasmuch as the industries included in the trade union returns are not uniform for each State. In comparing the results for the individual States, it must therefore be borne in mind that, to some extent, at least, comparisons are being drawn between different industries and not only between different States. Nevertheless, since the industrial occupations of the people vary considerably in the several States, all comparisons between the States based on comprehensive data as to unemployment must, to some extent, suffer from the defect indicated.

#### UNEMPLOYMENT IN DIFFERENT STATES AT THE END OF YEAR 1913.

| State.                   | Quarter ending 31st December, 1913. |          |             |             |
|--------------------------|-------------------------------------|----------|-------------|-------------|
|                          | Number Reporting.                   |          | Unemployed. |             |
|                          | Unions.                             | Members. | Number.     | Percentage. |
| New South Wales ... ..   | 127                                 | 105,836  | 4,794       | 4.5         |
| Victoria ... ..          | 109                                 | 80,122   | 4,679       | 5.8         |
| Queensland ... ..        | 50                                  | 14,228   | 624         | 4.4         |
| South Australia ... ..   | 64                                  | 23,114   | 2,020       | 8.7         |
| Western Australia ... .. | 76                                  | 21,759   | 1,014       | 4.7         |
| Tasmania ... ..          | 39                                  | 6,148    | 299         | 4.9         |
| Commonwealth... ..       | 465                                 | 251,207  | 13,430      | 5.3         |

The above figures shew that, at the time indicated, the degree of unemployment was the greatest in South Australia, followed, in the order named, by Victoria, Tasmania, Western Australia, New South Wales, and Queensland.

### § 4. Changes in Rates of Wages.

1. **Variations in Wage Index-Numbers in Various Industries, 1891 to 1912.**—The total number of different occupations for which particulars as to wages are available back to 1891 is 652. These wages relate generally to union rates, but in a few cases, more especially for the earlier years, when there were no union rates fixed, predominant or most frequent rates have been taken. The 652 occupations have been distributed over the fourteen industrial groups already specified, and index-numbers computed for each group for the whole Commonwealth. The wages refer generally to the capital town of each State, but in industries such as mining and agriculture, the rates in the more important industrial centres have been taken.

The following table shews wage index-numbers for the whole Commonwealth in each of the fourteen industrial groups during the years specified, wages in the year 1911 being taken as the base (= 1000). Rates of wages for females are not included. The index-numbers are "weighted" according to the number of persons engaged in different industrial groups in each State and the Commonwealth (see Report No. 2, pages 23 and 24).

**VARIATIONS IN WAGE INDEX-NUMBERS IN DIFFERENT INDUSTRIES IN THE  
COMMONWEALTH, 1891 to 1912. (WAGES IN 1911=1000.)**

| Particulars.                             | No. of<br>Occupations<br>included. | 1891.      | 1896.      | 1901.      | 1906.      | 1907.      | 1908.      | 1909.      | 1910.      | 1911.        | 1912         |
|--|------------------------------------|------------|------------|------------|------------|------------|------------|------------|------------|--------------|--------------|

| IX. Railway Services, etc. ...           | 68                                 | 892        | 894        | 918        | 920        | 923        | 927        | 956        | 965        | 1,000        | 1,046        |
| X. Other Land Transport ...              | 9                                  | 848        | 772        | 874        | 874        | 893        | 919        | 919        | 977        | 1,000        | 1,091        |
| XI. Shipping, etc. ...                   | 74                                 | 856        | 773        | 862        | 894        | 904        | 904        | 983        | 984        | 1,000        | 1,082        |
| XII. Agriculture, etc. ...               | 8                                  | 810        | 779        | 747        | 800        | 870        | 877        | 938        | 951        | 1,000        | 1,125        |
| XIII. Domestic, Hotels, etc. ...         | 17                                 | 723        | 671        | 674        | 683        | 686        | 706        | 819        | 838        | 1,000        | 1,008        |
| XIV. Miscellaneous ...                   | 36                                 | 832        | 812        | 817        | 830        | 875        | 883        | 908        | 957        | 1,000        | 1,093        |
| <b>All Groups* ...</b>                   | <b>652</b>                         | <b>848</b> | <b>816</b> | <b>848</b> | <b>866</b> | <b>893</b> | <b>900</b> | <b>923</b> | <b>955</b> | <b>1,000</b> | <b>1,051</b> |

\* Weighted average.

NOTE.—The figures in the above table are comparable horizontally, but are not directly comparable vertically. This is evident from the fact that the average wage in each industry group (and for all groups) in 1911 is made equal to 1000.

It may be seen that the index-numbers increase during the whole period under review except in 1896, when there was a fall. The wage index-number increased from 848 in 1891 to 1000 in 1911, and 1051 in 1912. It will be observed that the increase from 1891 to 1911 was relatively greatest in Classes XIII. (Domestic, Hotels, etc.) IV. (Clothing, Hats, Boots, etc.), and III. (Food, Drink, Tobacco, etc.), and it is probably in the industries and occupations included in these groups that "sweating" was most prevalent. The relative increase is least in Class VIII. (Mining, Quarries, etc.), the index-number for that group having increased only from 949 in 1891 to 1000 in 1911 and 1018 in 1912.

It was pointed out in Report No. 2 (see pages 25 and 26) that the index-numbers given in the above table are readily *reversible*, that is to say, any year other than the year 1911 can be taken as base, and an example was given, shewing the amount of wages payable in 1901, 1911 and 1912 in each industrial group for every £1 payable in 1891.

**2. Variations in Wage Index-Numbers in Different States, 1891 to 1912.**—The following table shews the progress in rates of wages for all industries in each State, wages in 1911 being taken as the base (= 1000). These results are based generally upon rates of wages prevailing in the capital town of each State, but in certain industries, such as mining, rates are necessarily taken for places other than the capital towns.

The following table shews that the relative increase from 1891 to 1911 was greatest in Victoria and South Australia, and least in Tasmania, but in the last-named State there was a remarkable increase, amounting to nearly 17 per cent., in 1912. This is, no doubt, accounted for to a large extent by the fact that the wages board system was first adopted in Tasmania in that year.

These index-numbers are, of course, also reversible, and an illustration was given in Report No. 2 (see page 27).

VARIATIONS IN WAGE INDEX-NUMBERS IN DIFFERENT STATES, 1891 to 1912.  
(WAGES IN 1911=1000).

| Commonwealth*         | 652                          | 848   | 816   | 848   | 866   | 893   | 900   | 923   | 955   | 1,000 | 1,051 |

\* Weighted average.

NOTE.—The figures in the above table are comparable horizontally, but are not directly comparable in the vertical columns. This is evident when it is considered that the average wage in each State in 1911 is taken equal to 1000.

## § 5. Current Rates of Wages in Different Occupations and States.

1. **General.**—In Report No. 2 particulars were given, so far as available for each State, of the prevailing rates of wages in upwards of 400 different occupations. In this section the list of occupations has been revised and brought up to date (30th April, 1914).

2. **Comparative Table of Time Rates of Wages, 1914.**—The particulars of wages given in the following table are obtained primarily from awards, determinations, and agreements under Commonwealth and State Acts, and therefore shew the minimum rates prescribed. In cases where no award, determination, or agreement was in force particulars are given, where possible, of the ruling union or predominant rate as furnished by employers or secretaries of Trade Unions. All particulars obtained from this source are marked with an asterisk. It will be seen that for convenience of comparison *the wages are in nearly all cases presented as a weekly rate*, though in many industries they are actually based on daily or hourly rates, as specified in awards, determinations or agreements. This caution is necessary, in view of the fact that it is often in those industries and occupations in which employment is of an exceptionally casual or intermittent nature that wages are fixed or paid at a daily or hourly rate. Hence the average weekly earnings in such occupations will probably fall considerably short of the weekly rates specified in the table.

The rates specified refer generally to the capital town of each State, but in industries, such as mining and agriculture, rates are necessarily taken for places other than the capital towns. *The figures given in the first part of the table relate to journeymen or adult male workers, and in the second part to adult female workers, and in each case represent (except where otherwise specified in the footnotes) the amounts payable for a full week's work of 48 hours.* In every case where the hours of labour constituting a full week's work are other than 48, the number of hours is indicated in the footnotes.

**WEEKLY RATES OF WAGES OF JOURNEYMEN OR ADULT MALE WORKERS, AT 30th APRIL, 1914, IN THE CAPITAL TOWN OF EACH STATE FOR A FULL WEEK'S WORK.**

NOTE.—Except where otherwise specified in the footnotes, the hours of labour constituting a full week's work are forty-eight. The rates specified are in most cases the minimum rates payable in the capital towns to journeymen or adult workers under Awards of Commonwealth or State Arbitration Courts, or under Determinations of Wages Boards. Where no award, determination, or agreement rates are in force, the ruling Union or predominant rates are given and are indicated by asterisks. Rates payable in the mining, shipping, agricultural, pastoral, etc., industries do not, of course, ordinarily refer to the capital towns.

† See footnote † on next page.

For footnotes see page 1000. † The rates of wages quoted for Builders' Labourers for Sydney, Melbourne, Brisbane, and Adelaide are those payable under State Determinations or Awards. The rates quoted for Perth are the ruling union or predominant rates, while those for Hobart are the rates fixed by the award of the Commonwealth Arbitration Court, which also awarded the following:—Sydney and Adelaide 60s. 6d., Melbourne 56s. 10d., and Brisbane 55s. per week of 44 hours. The validity of parts of this award has not yet been decided.

For footnotes see page 1000.

† The hours of labour for Railway Employees are 48 per week (in N.S.W. 96 per fortnight), except in the following cases:—N.S.W.—Porters, 108 to 120 hours per fortnight; VICTORIA—Porters, 48 to 60 hours per week; SOUTH AUSTRALIA—Porters and Signalmen, 48 to 57 hours per week; and TASMANIA—Guards and Shunters, 54, and Porters, 48 to 54 hours per week. Owing to the difference in the classification of grades of Railway Employees in the various States, only minimum and maximum rates are quoted, excluding those for Foremen. ‡ For Sydney, the Wages are determined by a State Award. For Melbourne, Perth, Fremantle, and Hobart agreements have been made under Commonwealth Arbitration Act. For Brisbane and Adelaide, Awards have been made by the Commonwealth Court of Conciliation and Arbitration. It is understood that these rates are not being paid. In the table, the rates fixed by the State Boards are given for Brisbane, while predominant rates are given for Adelaide. By Commonwealth agreements the wages for Gripmen in Melbourne have been fixed as follows:—1st year of service 51s., 2nd year of service 54s., 3rd year of service and thereafter 57s., except in one instance where 55s. per week has been made the standard wage.

## § 6.—Retail Prices, House Rents, and Cost of Living.

1. **Introduction.**—In Report No. 1, issued in December, 1912, the results of certain investigations into the subjects of Prices, Price-Indexes and Cost of Living in past years were published, and some account was given of the methods employed for the collection of the data and of the technique adopted in the computation of the results. An important discussion of the theory upon which the calculation of the index-numbers is based was given, but being necessarily too technical for the ordinary reader, was relegated to Appendixes. In Report No. 2 results of further investigations were given; and in that Report and in Labour Bulletins Nos. 1 to 4 information was given as to variations in retail and wholesale prices, house-rent, and cost of living up to the end of 1913.

It must here suffice to state that the method adopted for the computation of the index-numbers is what may very properly be called the “aggregate expenditure” method. The first process is, of course, to work out the average price of each commodity included, and numbers (called “mass-units”) representing the *relative* extent to which

each commodity was on the average used or consumed are then computed. The price in any year of each commodity multiplied by its corresponding "mass-unit" represents, therefore, the relative total expenditure on that commodity in that year *on the basis of the adopted regimen*. It follows, therefore, that by taking for any year the sum of the price of each commodity multiplied by its corresponding "mass-unit," a figure is obtained which represents the relative aggregate or total expenditure of the community in that year on all the commodities, etc., included. By computing these aggregate expenditures for a series of years and taking the expenditure in any desired year as "base," that is, making the expenditure in that year equal to 1000 units, the relative expenditure in any other year, that is to say, the "index-numbers," are readily ascertained. A numerical example of the technique and methods adopted for the computation of index-numbers was given in Report No. 2 (pp. 44 and 45).

**2. Scope of Investigation.**—It was pointed out in Report No. 1 that, in any investigation into the question of change in cost of living of a community, a careful distinction must be drawn between two things, viz:—

- (a) Variations in the *purchasing power* of money, and
- (b) Variations in the *standard of living*.

In Report No. 2, attention was drawn to the fact that the second element (b) can be limited, at any rate to some extent, by the exercise of self denial and thrift, and that such limitation is at the disposal of each individual; the former (a) is not subject to this possibility. Thus, from this aspect, social economics are concerned *primarily* with an accurate estimation of variations in the purchasing power of money and only secondarily with the question of the general standard of living which has been reached. The first desideratum demands that we shall select a suitable list of commodities, the quantities of each being taken in due proportion to their relative average consumption, and, keeping this list with the quantities constant, ascertain what it costs to purchase the whole group. In this way we can compare the cost in different areas or districts at the same time, as well as the variation in any one place from time to time. This is the "aggregate expenditure" method explained above.

As explained in Report No. 1, special steps were taken to conduct the investigation back as far as 1901 for the capital towns only. The collection of current monthly returns as to prices and of quarterly returns of house rents commenced in thirty of the more important towns of the Commonwealth in January, 1912.

**3. Commodities and Requirements Included.**—The 47 items of expenditure included have been divided into four groups, viz.:—(a) groceries and bread, (b) dairy produce, (c) meat, and (d) house rent. The omission of clothing, fuel and light, travelling, amusements, etc., may on a superficial examination appear to limit the value of the results. Against this, reasons for which these items have been omitted were given in Report No. 1\*, and it was explained that index-numbers based on these four groups satisfactorily reflect the general rise and fall in cost of living. It should, moreover, be pointed out that whereas the expenditure on the four groups included amounts to no less than 45 per cent. on the total expenditure, cost of clothing amounts to only 12 per cent., and of fuel and light to as little as 3 per cent. It follows, therefore, that before the index-numbers, based on the four groups, can cease to truly reflect variations in general purchasing value, changes in the price of clothing must have departed very widely, one way or the other, from the general change which has occurred. This applies still more forcibly, of course, to changes in price of fuel and light. Since prices of nearly all commodities generally move in the same direction, it is obvious that the validity of the index-numbers, based on the four groups referred to, can be vitiated only under a quite abnormal state of affairs, and even then only to a slight extent.

---

\* See "Prices, Price-Indexes and Cost of Living in Australia," Labour and Industrial Branch Report No. 1, by G. H. Knibbs, C.M.G., F.S.S., etc., December, 1912, pp. 15 to 20.

In Report No. 2 (pages 46-7) a tabular statement was given furnishing particulars of the commodities and items included, the units of measurement for which prices are collected, and the mass-units shewing the relative extent to which each item is used or consumed.

4. *Variations in the Cost of Living in each Metropolitan Town, 1901 to 1913.*—In Reports Nos. 1 and 2 and Labour Bulletins Nos. 1 to 4 index-numbers were given for each of the four groups, and for all groups combined, for each capital town since 1901, the expenditure in 1911 being taken in each case as base (=1000). In this section only summarised results are given. Firstly, for food and groceries; secondly, for house rent; and thirdly, for all groups combined—the weighted average expenditure for all capital towns in 1911 being taken in each case as base (=1000). The index-numbers are fully comparable with each other, that is to say they shew not only the variations from year to year in each capital town, but also the relative cost as between the towns. In the preceding issue of this book the index-numbers given were comparable in the horizontal lines, but not in the vertical columns, the reason being that the cost in each town in 1911, whatever it might be, was made equal to 1000. As it appears, however, that these figures have been misused to shew the relative cost as between the various towns, it has now been thought desirable to substitute index-numbers which are comparable in all respects, the average cost for the six towns in 1911 being made equal to 1000.

(i.) *Food and Groceries.* The index-numbers thus computed for the three groups comprising groceries and food are shewn in the following table:—

**RETAIL PRICES IN METROPOLITAN TOWNS, INDEX-NUMBERS FOR GROCERIES  
AND FOOD (GROUPS I., II., and III.), 1901 to 1913.**

| TOWN.                | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. | 1909. | 1910. | 1911. | 1912. | 1913. |
|----------------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| Sydney ...           | 917   | 1,067 | 1,029 | 877   | 972   | 964   | 936   | 1,030 | 1,012 | 1,000 | 989   | 1,124 | 1,131 |
| Melbourne            | 965   | 1,015 | 974   | 916   | 952   | 945   | 925   | 995   | 949   | 960   | 935   | 1,082 | 1,024 |
| Brisbane             | 965   | 1,015 | 987   | 892   | 945   | 959   | 947   | 1,023 | 983   | 1,000 | 1,018 | 1,102 | 1,042 |
| Adelaide...          | 1,028 | 1,026 | 981   | 940   | 993   | 982   | 951   | 1,010 | 1,025 | 1,001 | 1,020 | 1,154 | 1,119 |
| Perth ...            | 1,184 | 1,274 | 1,283 | 1,210 | 1,258 | 1,237 | 1,197 | 1,226 | 1,212 | 1,251 | 1,346 | 1,345 | 1,267 |
| Hobart ...           | 1,011 | 1,050 | 1,054 | 981   | 1,030 | 1,047 | 1,010 | 1,055 | 1,093 | 1,073 | 1,058 | 1,190 | 1,164 |
| Weighted<br>Average* | 969   | 1,052 | 1,017 | 922   | 984   | 976   | 953   | 1,028 | 1,004 | 1,003 | 1,000 | 1,126 | 1,094 |

\* For all capital towns.

The above figures are directly comparable in every respect; thus it will be seen that the same quantity of food and groceries, which cost £1000 in the capital towns considered as a whole in 1911, would have cost £917 in Sydney in 1901, £1346 in Perth in 1911, or £1024 in Melbourne in 1913.

(ii.) *House Rent.*—In the following table index-numbers are given computed for the weighted average house rent in each of the capital towns from 1901 to 1913, taking the average rent for the six capital towns in 1911 as the base (= 1000). The average rent has been obtained for each town separately by multiplying the average predominant rent for each class of house (*i.e.*, houses having less than 4 rooms, 4 rooms, 5 rooms, 6 rooms, 7 rooms, and over 7 rooms) by a number ("weight") representing the relative number of houses of that class in the particular town. The sum of the products thus obtained, divided by the sum of the weights, gives the weighted average for all houses. The number of houses in each class for each town was obtained from the results of the 1911 census. It should be observed, therefore, that these index-numbers are based on the weighted average rents for all houses, and that they do not refer to any particular class

of houses. The actual predominant rents for each class were given in appendixes to Reports Nos. 1 and 2, and an examination of these figures shews that for some classes of houses the increase has been greater, and in some less, than the general increase indicated in the following table :—

**HOUSE RENTS IN METROPOLITAN TOWNS, INDEX-NUMBERS SHEWING  
WEIGHTED AVERAGE RENTS (GROUP IV.), 1901 to 1913.**

| Town.             | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. | 1909. | 1910. | 1911. | 1912. | 1913. |
|-------------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| Sydney            | 858   | 854   | 856   | 866   | 887   | 891   | 911   | 922   | 955   | 988   | 1,090 | 1,183 | 1,246 |
| Melbourne         | 733   | 744   | 747   | 764   | 771   | 782   | 804   | 828   | 842   | 916   | 970   | 1,016 | 1,089 |
| Brisbane          | 488   | 492   | 507   | 508   | 519   | 524   | 575   | 616   | 662   | 700   | 767   | 804   | 863   |
| Adelaide          | 629   | 629   | 629   | 625   | 702   | 761   | 812   | 872   | 940   | 1,018 | 1,112 | 1,160 | 1,125 |
| Perth             | 801   | 796   | 802   | 798   | 739   | 716   | 684   | 678   | 667   | 696   | 810   | 860   | 928   |
| Hobart            | 667   | 669   | 673   | 674   | 681   | 686   | 708   | 727   | 749   | 776   | 805   | 829   | 887   |
| Weighted Average* | 751   | 753   | 756   | 766   | 782   | 793   | 816   | 839   | 867   | 919   | 1,000 | 1,064 | 1,118 |

\* For all capital towns.

NOTE.—The above figures are directly comparable in every respect.

It may be seen that, except in Adelaide, where rents remained constant from 1901 to 1904, and in Perth, where they decreased from 1903 to 1909, there has been a uniform increase in each metropolitan town during the whole of the period under review. The increase has been greater in Adelaide (where the average rent in 1901 was only 629, compared with 1112 in 1911, and 1125 in 1913), and in Brisbane than in the other towns. It should be observed, however, that at the commencement of the period rents were exceptionally low in Adelaide, and were comparatively low in Brisbane (see Appendix IV. to Report No. 1). The graph for Perth presents features entirely different from those for the other towns; the fall in rents commencing in 1903 and lasting until 1907 is followed, after another temporary decline in 1909, by a rapid rise.

(iii.) *Cost of Living*.—The weighted averages for all four groups are of importance, as indicating the general results of this investigation so far as cost of living is concerned. The following table shews the index-numbers for groceries, food, and house rent for each metropolitan town, the weighted average cost for the six capital towns in 1911 being taken as base (= 1000) :—

**COST OF LIVING IN METROPOLITAN TOWNS, INDEX-NUMBERS SHEWING  
WEIGHTED AVERAGE RESULTS FOR ALL GROUPS (GROCERIES, DAIRY  
PRODUCE, MEAT, AND HOUSE RENT), 1901 to 1913.**

| Town.             | 1901. | 1902. | 1903. | 1904. | 1905. | 1906. | 1907. | 1908. | 1909. | 1910. | 1911. | 1912. | 1913. |
|-------------------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|-------|
| Sydney            | 893   | 979   | 958   | 872   | 937   | 934   | 926   | 986   | 989   | 995   | 1,031 | 1,148 | 1,178 |
| Melbourne         | 870   | 903   | 881   | 854   | 878   | 878   | 875   | 926   | 905   | 942   | 950   | 1,055 | 1,051 |
| Brisbane          | 769   | 800   | 790   | 734   | 770   | 780   | 794   | 856   | 851   | 877   | 915   | 979   | 969   |
| Adelaide          | 864   | 863   | 837   | 812   | 873   | 891   | 894   | 953   | 990   | 1,008 | 1,058 | 1,157 | 1,121 |
| Perth             | 1,027 | 1,077 | 1,085 | 1,041 | 1,045 | 1,023 | 986   | 1,001 | 988   | 1,023 | 1,126 | 1,154 | 1,128 |
| Hobart            | 869   | 893   | 897   | 855   | 886   | 899   | 886   | 920   | 952   | 951   | 954   | 1,042 | 1,050 |
| Weighted Average* | 880   | 929   | 910   | 858   | 901   | 902   | 897   | 951   | 948   | 970   | 1,000 | 1,101 | 1,104 |

\* For all capital towns.

NOTE.—The above figures are directly comparable in every respect.

Generally speaking, prices were low in 1904, high in 1902 and 1908, and still higher in 1912. The general trend of the graph for Perth is different to that for the other towns, owing mainly to the decline in house rents in that place, which occurred from 1903 to 1907, and again in 1909.

The general result for all the six towns shews that cost of living was slightly over 10 per cent. higher in 1912 than in 1911. The cost-of-living index-number for 1913 was only 0.3 per cent. higher than for 1912. It was lower in Melbourne, Brisbane, Adelaide, and Perth, and higher in Sydney and Hobart.

5. **Relative Cost of Living in Different Towns, 1913.**—The index-numbers given in the preceding paragraphs show *changes in the cost of living separately for each individual town during the years 1901 to 1913*. The figures given in the table below show *the relative cost of living in 1913 in the thirty towns* for which particulars are now being collected. The cost of living in each town is compared with the weighted average for all towns. That is to say, the average expenditure in each town has been weighted by a number representing the population of the town, and a weighted average expenditure for all towns has been computed. Taking this average expenditure as the base (=1000), the relative expenditure in each town is shewn. Owing to the concentration of population in the capital towns, the prices and rents in these towns have a preponderating influence on the weighted average index-numbers for all towns combined.

**COST OF LIVING 1913.—INDEX-NUMBERS SHEWING RELATIVE COST IN EACH OF THIRTY TOWNS (INCLUDING 4, 5, AND 6-ROOMED HOUSES AND ALL HOUSES), COMPARED WITH WEIGHTED AVERAGE COST FOR ALL TOWNS.**

| Town.                   | Groceries and Food. | HOUSE RENT.          |                      |                      |                              | GROCERIES, FOOD, AND RENT, INCLUDING HOUSES HAVING— |              |              |                              |

Some few words as to the proper interpretation of the above table may not be out of place. The weighted average for all towns represents the price paid, on the average, by the people of all the towns regarded as a single community. In other words, if the people of the thirty towns are paying *on the average* £1000 for groceries and food, the people in Sydney are paying £1023, those in Newcastle £1019, and so on. (See column I.) Or again, if the people of the thirty towns are paying on the average £1000 for the four series of items, then those of Melbourne are paying £973, of Ballarat £801, and so on (See final column.) Thus, in this table, the figures are *comparable vertically, but are not directly comparable horizontally*, and this is to be carefully borne in mind in making comparison. That they are not directly comparable horizontally is immediately evident

when it is remembered that each series, or group, for all towns is represented by the one figure—1000—though actually they do not represent equal amounts.

Comparing the first column with the fifth and last columns, it may be seen that the relative costs in the different towns in regard to the two main divisions, and the weighted average for all groups combined, differ considerably. Thus, in Sydney the index-number for rent (all houses), is 1196, or 19.6 per cent., above the weighted average for all towns, whereas the index-number for groceries and food is 1023, or 2.3 per cent. above the average. In Brisbane, on the other hand, the index-number for groceries and food is greater than that for house-rent, both numbers being below the weighted average. In some of the smaller towns, too, especially in the mining districts, it may be seen that rents are very low, and groceries high, compared with the weighted average.

**6. Variation in Purchasing Power of Money, 1901 to 1913.**—In several of the tables given in the preceding paragraphs, attention has been drawn to the fact that the index-numbers are not directly comparable either horizontally or else in the vertical columns. The reasons for this were also pointed out. By combining the figures given for the capital towns on page 1018 (a) shewing variations in cost of living from year to year in each town separately, and (b) shewing relative cost of living in the several towns during the year 1913, results which are in all respects comparable may be obtained. These are shewn in the following table, in which the average cost for the six capital towns in the year 1911 has been taken as the base. This base has been taken as equal to 20s., instead of 1000, as in the former tables.

A special investigation as to relative cost of living in 100 towns in the Commonwealth was made in November, 1913, during which month a householders' budget inquiry as to expenditure on living was also conducted. The results of the former investigation are shewn in the following tables, and in the map on page 1025, while the results of the latter will be included in a special report to be issued at an early date;—

**PURCHASING POWER OF MONEY.—AMOUNTS NECESSARY ON THE AVERAGE IN EACH YEAR FROM 1901 TO 1913 TO PURCHASE IN EACH CAPITAL TOWN WHAT WOULD HAVE COST ON THE AVERAGE £1 IN 1911 IN THE AUSTRALIAN CAPITALS REGARDED AS A WHOLE.†**

\* Basis of Table.

These figures shew not only the variations in cost of living from year to year in each town separately, but also (in the horizontal lines) the relative cost in the several towns in each year. Thus each value given for any town and year is directly comparable with any other value. It may be seen, for example, that 17s. 10d. in Sydney in 1901 was equivalent to 17s. 5d. in Melbourne, or to 20s. 5d. in Perth in 1906, and to 20s. on the average in all six towns in 1911, and to 23s. 10d. in Sydney in the second quarter of 1913.

While the figures in each vertical column shew the increase and decrease in cost of living from year to year in each town respectively, those in the horizontal lines shew the relative cost of living in any given year.

(i.) *Groceries and Food only.* The following table has been computed in the same manner as that indicated above, but relates to *groceries and food* (46 items) *only*. The average expenditure for the six capital towns in 1911 has again been taken as the basis of the table (= 20 shillings) and the figures are, of course, comparable throughout.

**PURCHASING-POWER OF MONEY.—GROCERIES AND FOOD ONLY.—AMOUNT NECESSARY ON THE AVERAGE IN EACH YEAR FROM 1901 to 1913 TO PURCHASE IN EACH CAPITAL TOWN WHAT WOULD HAVE COST ON THE AVERAGE £1 IN 1911 IN THE AUSTRALIAN CAPITALS REGARDED AS A WHOLE.**

\* Basis of Table.

## § 7. Wholesale Prices.

1. **General.**—The results of an investigation into wholesale prices in Melbourne were given in some detail in Report No. 1, from 1871 to the end of September, 1912. In Report No. 2 summarised results were included for the whole of the latter year.

The index-numbers up to the year 1911 are based on the prices of eighty commodities, but since that year the number has been increased to ninety-two.\* The methods followed for the computation of the wholesale price index-numbers are the same as those adopted in regard to retail prices. The commodities included the units of measurement for which the prices are taken, and the mass-units, indicating the relative extent to which each commodity, in the units of measurement specified, is used or consumed, are shewn in a tabular statement in Report No. 2 (page 61).

2. **Index-Numbers and Graphs.**—Index-numbers have been computed for each group of commodities, as well as for all groups together. The index-numbers for the several groups, and for all groups together, are shewn in the following table.

\* In the computation of the index-numbers for years prior to 1911, the aggregate expenditure on 80 commodities in 1911 is taken as base (= 1000), while for later years the aggregate expenditure on 92 commodities is taken.

(i.) *Table of Index-numbers.*—The index-numbers have in each case been computed with the prices in the year 1911 as base; that is to say, *they shew the amount which would have had to be expended in each of the years specified in order to purchase what would have cost £1000 in 1911, distributed in purchasing the relative quantities (indicated by the mass-units) of the several commodities included in each group, and in all groups respectively.* Thus, in the last column it may be seen that the cost of the relative quantities of the various commodities was 1229 in 1871, and 974 in 1901, as compared with 1000 in 1911, 1170 in 1912, and 1088 in 1913. In other words, prices were lower in 1911 than in either 1871 or 1912, and the purchasing power of money in 1911 was, accordingly, greater. Again, prices were higher in 1911 than in 1901, and the purchasing power of money in the former year was therefore less.

**MELBOURNE WHOLESALE PRICES INDEX-NUMBERS, 1861 to 1912, COMPUTED TO YEAR 1911 AS BASE.**

NOTE.—The figures given in this table are comparable in the vertical columns, but are not directly comparable horizontally. The index-numbers are reversible.

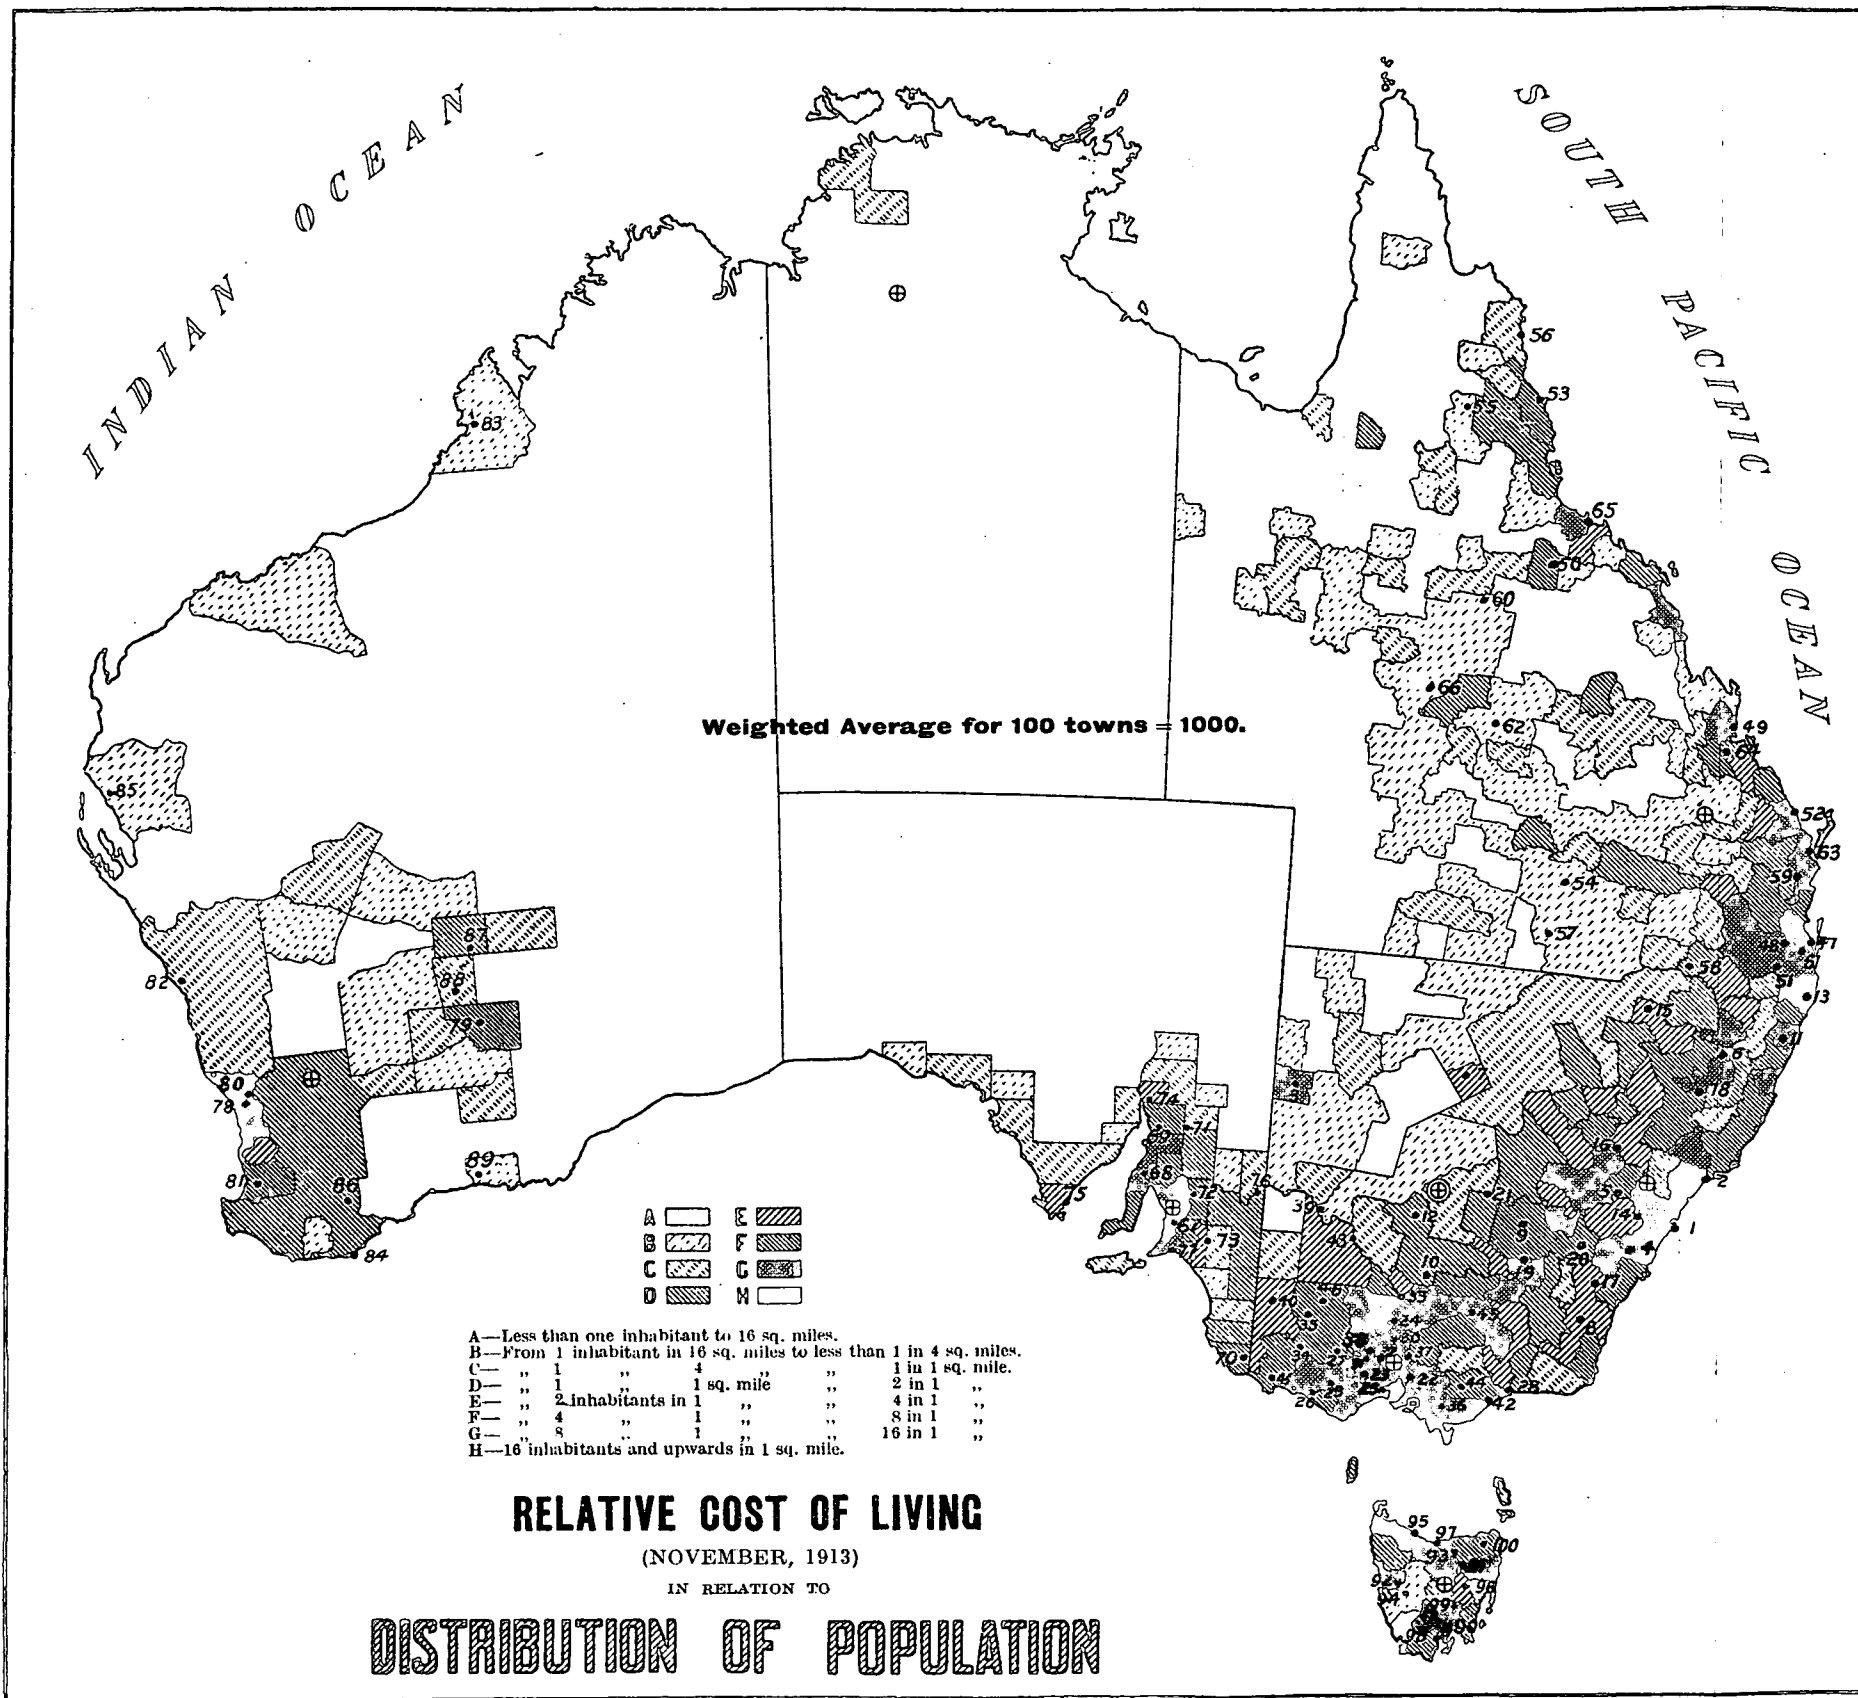

(ii.) *Graphs.*—The index-numbers are shewn for each group and for all groups combined in the graphs on page 1026. The heavy line, repeated on each graph, represents the index-numbers for the weighted average for all groups, and is shewn so that comparison may be made between the price levels for all commodities and those for the commodities comprised in each group separately. The index-numbers for the individual groups are represented by the light lines. The broken lines at the commencement of each graph shew the index-numbers for the separate years, 1861 and 1866, the continuous records commencing with the year 1871. The actual index-numbers for the whole period were given in Report No. 1.

**3. Seasonal Fluctuations and Tables of Prices.**—Information as to seasonal fluctuations in wholesale prices was given in Report No. 2 (page 64) and tables of prices of each commodity were given in Appendixes to Reports Nos. 1 and 2.

## 8. Miscellaneous.

1. **General.**—The year 1913 is the first complete year for which records as to various labour and industrial matters have been collected. Statistics relating to such matters as strikes and lockouts, changes in rates of wages, labour organisations, unemployment, assisted and nominated immigrants, operations of employment bureaux, industrial accidents, distribution of wages, nominal and effective wages, and operations under various Commonwealth and State Industrial Acts, may be found in the Quarterly Labour Bulletins and other Labour Reports.

2. **Map shewing relative Cost of Living.**—In November, 1913, a special inquiry was made as to the relative cost of living in 100 towns in the Commonwealth. On the map on page 1025 each town is shewn by means of a number, the reference list at the side of the map indicating the town corresponding to each number and its relative cost-of-living index-numbers. The figures in black type relate to the cost of food, groceries and rent of 5-roomed houses, while those in light type refer to food and groceries only. A glance at the map shews that the distribution of the 100 towns selected is in close approximation to the density of population (indicated by hatching). The weighted average cost for all the 100 towns is taken as the base.

**Reference to Numbers on Map.**

\* House rent not available.

Heavy figures denote index-numbers for Food, Groceries, and Rent of 5-roomed Houses.  
Light figures denote index-numbers for Food and Groceries only.

## MELBOURNE WHOLESALE PRICE INDEX-NUMBERS, 1861 TO 1913.

EXPLANATORY NOTE.—The scale for each graph is shown by the figures on the left of the diagram, the line marked 1000 shewing the base line (for the year 1911) in each case. The heavy line in each graph represents the index-numbers for all groups combined, the light line indicating in each case the index-numbers for the separate group.

## SECTION XXXIV.

## MISCELLANEOUS.

## § 1. Immigration.

## (A) The Encouragement of Immigration into Australia.

1. **Introduction.**—Various measures have from time to time been adopted by the Commonwealth and State Governments, as well as by private societies and individuals, with a view to promoting the immigration of suitable classes of settlers into Australia. Some of the States of the Commonwealth are at present pursuing immigration policies of a vigorous nature; in others, relatively little is being done. The activities of the Commonwealth Government (which is vested with constitutional powers in regard to immigration under Sec. 51, xxvii., of the Constitution Act 1900) with respect to the encouragement of immigration, have hitherto practically been confined to advertising in handbooks, newspapers, and periodicals, the resources and attractions of Australia.

2. **State Immigration.**—The advertising in the United Kingdom of the resources of the individual States has been carried out by their Agents-General in London. Various means have been adopted, including newspaper advertising; the publication of illustrated pamphlets bearing on the resources and principal primary industries of the State; lectures by officers who have a knowledge of the conditions prevailing in the State; official displays at the principal agricultural, manufacturing, and similar exhibitions; cinematographic pictures typical of industrial life and scenic views; and pictures and lantern slides.

(i.) *Nominated and Assisted Passages.* Arrangements have been made by most of the State Governments with several of the principal shipping companies for substantial reductions in the amounts of passage money to be paid by immigrants. These reductions are generally granted to all persons desiring to settle on the land or engaging in any form of rural industry, to domestic servants, and to any others who satisfy one of the several Agents-General in London that they will make suitable settlers. Provision has also been made whereby settlers may nominate their relatives or friends for passage to Australia at greatly reduced rates.

(ii.) *Reception on Arrival.* Immigrants whose coming is advised are met on board the vessel on arrival by Government officers, who make themselves acquainted with the needs of the passengers and assist and advise them in various ways. To those desirous of settling on the land, information and assistance is rendered by officers of the Lands Department, and special concessions are granted in respect of fares on the Government railways. In other cases endeavours are made to obtain employment for each applicant according to his special needs and qualifications.

(iii.) *Numbers of Immigrants.* Particulars of the net immigration to the Commonwealth are given on pages 100 and 107, and of assisted immigration on page 112, hereinbefore.

(iv.) *Recent Immigration.* During 1910 and the three subsequent years, a great advance has been made in Australian immigration generally, the State Governments having adopted more active and direct means than had hitherto existed for making the advantages and opportunities of their respective States better known to the people of the United Kingdom, Europe, and America. In Victoria, to which State a small number of emigrants from America had been attracted (chiefly by the irrigable areas), it was decided to further enlighten American and Canadian home-seekers with regard to irrigated lands, and a delegation was accordingly sent to Vancouver by the Victorian Government to arrange for a special excursion of land-seekers, who arrived in Australia early in May, 1912. Many of them have since taken up land in the irrigable areas and other portions of the State. It appears likely that the success of the Victorian experiment will result in definite steps being initiated by the other States of the Commonwealth to attract population from similar sources.

(v.) *Uniform Rates for State-aided Immigrants.* The matter of State-aided immigration to Australia was discussed at the Premiers' Conference, held in Melbourne early in 1912, and this resulted, amongst other things, in the fixing of a scale of minimum rates of passage money which immigrants to any of the States would be charged in future, such rates to operate as from 31st March, 1912. It was expressly agreed, however, that, while no State should charge a lower amount than those mentioned, no objection would be made to higher rates being imposed. The minimum scale of passage rates arranged at the Conference is as follows:—(a) Farmers, farm hands, skilled artisans, and all nominated, assisted, or indentured male immigrants, £6. (b) Adult females, £3. (c) Children of immigrants under 12 years of age, £1 10s. Age limits for all State-aided immigrants were also fixed as follows:—(a) Males, married women and widows, 45 years. (b) Single women, 35 years. The only free immigrants to be those whom the shipping companies carry free. It was also arranged that the maximum bonus payable to immigration agents be as follows:—(a) Per adult, £1; per child under 12 years, 10s. (b) In the case of an assisted immigrant recruited by an agent nominating his wife and family within twelve months of his arrival in the State, a similar bonus on account of the wife and family be paid to the agent. (c) In the cases of immigrants with capital of £200 and over, which capital is deposited with the Agent-General for transmission to the State, an additional bonus of 1 per cent. to the agent on the capital so deposited.

**3. Initiation of Commonwealth Scheme.**—For the financial year 1912-13 a sum of £50,000 was voted to the Commonwealth Department of External Affairs for advertising the attractions of Australia for settlers, farm workers, and tourists. The State Immigration Bureaux co-operate with the Department of External Affairs in keeping the High-Commissioner for Australia in London advised as to the openings for agricultural workers, and as to general information concerning matters of interest to intending settlers. A press advertising campaign has been initiated, the Commonwealth carrying on the general advertising of Australia by means of paragraphs and illustrated articles in British, European, and American publications, while the several States advertise for the class of immigrants they specially require. Bioscope films are utilised for the illustration of lectures. Exhibitions are held throughout the chief rural districts and at the important agricultural shows in Great Britain, and handbooks for settlers and tourists, as well as folders and other publications, have been issued. Pictorial posters are also utilised.

**4. The High Commissioner for Australia and the Agents-General.**—Intending settlers or immigrants may, on application, obtain information from the High-Commissioner for Australia—

THE RIGHT HON. SIR G. H. REID, P.C., G.C.M.G., ETC.  
COMMONWEALTH OFFICES,  
72 VICTORIA STREET,  
LONDON, S.W.

Information regarding individual States may be obtained from the officials specified below :—

#### (B) The Regulation of Immigration into Australia.

1. **Pre-Federal Restrictions.**—(i.) *Alien Races.* The several States of Australia had regarded it as desirable, long prior to Federation, to impose certain restrictions upon the admission of persons wishing to become inhabitants of those States. The influx of Chinese, for example, was limited by stringent statutes, and later general Acts were passed in some of the States which had the effect of restricting the immigration of other—principally Asiatic—races.

(ii.) *Undesirable Immigrants.* Further restrictions were placed upon the admission of persons who were undesirable as inhabitants, either for medical or moral reasons, or who were likely to be an economic burden upon the community.

2. **Powers and Legislation of the Commonwealth.**—(i.) *Constitutional Powers.* By Chap. I., Pt. V., Sec. 51, xxvii. and xxviii. of the Commonwealth Constitution Act the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals. (See page 26 herein.)

(ii.) *Legislation.* The powers above specified have now been exercised by the Commonwealth Government, and the laws passed in pursuance thereof supersede the State laws above referred to.

The first Act passed, dealing with this matter, was the Immigration Restriction Act 1901, which contained provisions restricting the immigration of the classes of persons mentioned above. This Act, which contained clauses restricting the immigration of persons under contract, was subsequently repealed by the Contract Immigrants Act 1905, which amended and was substituted for the original Act, but both these Acts have since been amended by the Immigration Restriction Acts of 1908 and 1910, and the Immigration Act of 1912. The immigration of alien races and undesirable persons is now regulated by Immigration Acts 1901-12. Admission of immigrants under contract to perform manual labour is, however, still controlled by the provisions of the Contract Immigrants Act 1905, and will be permitted if the contract is in writing, is made by or on behalf of some person named, who must be resident in Australia, and approved by the Minister. Such approval will not be given if the contract is made with the view of affecting an industrial dispute or if the remuneration and other terms are not as advantageous to the contract immigrant as those current for workers of the same class at the place where the contract is to be carried out.

There is an additional provision where the proposed immigrant is not a British subject born in the United Kingdom or descendant of such a person. In such case it has to be proved that there is a difficulty in the employers obtaining in the Commonwealth a worker of at least equal skill and ability.

In case of infraction of the law it is provided that the contract is absolutely void and the immigrant and employer are both liable to penalties, and the employer is also liable to pay the immigrant until he obtains employment, or, at the option of the immigrant, to provide expenses for his return to the country whence he came.

**3. Prohibited Immigrants.**—(i.) *Provisions of the Acts.* Persons comprised in the following classes are prohibited from entering the Commonwealth, viz. :—(a) Any person who fails to pass the dictation test; that is to say, who fails to write out not less than fifty words of a language prescribed by regulation when dictated to him by an officer administering the Act. (b) Any person not possessed of the prescribed certificate of health. (c) Any idiot, imbecile, feeble-minded person, or epileptic. (d) Any person suffering from a serious transmissible disease or defect. (e) Any person suffering from pulmonary tuberculosis, trachoma, or with any loathsome or dangerous communicable disease, either general or local. (f) Any person suffering from any other disease or mental or physical defect, which from its nature is, in the opinion of an officer, liable to render the person concerned a charge upon the public or upon any public or charitable institution. (g) Any person suffering from any other disease, disability, or disqualification which is prescribed. (ga) Any person who has been convicted of a crime and sentenced to imprisonment for one year or more, unless five years have elapsed since the termination of the imprisonment. (gb) Any person who has been convicted of any crime involving moral turpitude, but whose sentence has been suspended or shortened conditionally on his emigration, unless five years have elapsed since the expiration of the term for which he was sentenced. (gc) Any prostitute, procurer, or person living on the prostitution of others.

Regarding (a) it may be stated that the Act of 1901 provided for the dictation of not less than fifty words of a European language. The Act of 1905 provided for the retention of this test until regulations be passed prescribing the languages to be employed. No such regulations have yet been made, and the provision of the Act of 1901 is therefore *de facto* still in force. It may be stated that in general practice the dictation test is not and never has been imposed upon persons of European race.

Regarding (b), the Amending Act of 1912 provides for the establishment of Commonwealth Medical Bureaux at places outside the Commonwealth, and the appointment of medical referees to examine intending immigrants and issue certificates of health in the prescribed form, on payment of a prescribed fee. A chief medical officer has already been appointed to take charge of the Bureaux attached to the High Commissioner's Office in London. He will arrange for the selection of suitable medical referees for appointment to act at various centres throughout the United Kingdom.

Provision is also made for the medical examination of, and the issue of certificates of health to intending immigrants who embark at a port where there is no medical referee, or who arrive in the Commonwealth without a certificate in the prescribed form.

Pending the proper organisation in the United Kingdom of the Medical Bureaux and the appointment of medical referees, the requirement that immigrants must produce a certificate of health on arrival in Australia will not be enforced.

(ii.) *Exemptions.* To these restrictions there are the following exemptions, viz. :—(a) Any person holding an exemption certificate. (b) Members of the King's regular land and sea forces. (c) The master and crew of any public vessel of any Government. (d) The master and crew of any other vessel landing during the stay of the vessel in a Commonwealth port. The exemption of members of a crew during the vessel's stay in port is subject to the production of identification cards to an officer on demand. This provision will not be enforced in respect of white members of a crew, but there is a further provision which empowers an officer to refuse any member of a crew permission to land unless he is satisfied that such person is free from a communicable disease. Before the ship can obtain her outward clearance the crew must, at the demand of an officer administering the Act, be mustered, and if any member of the crew be missing,

and would otherwise, in the opinion of the officer, have been a prohibited immigrant, then such person is deemed to be a prohibited immigrant, and until the contrary be proved, to have entered the Commonwealth contrary to the Act. (e) Any Commissioner of, or other person accredited from, the Imperial or any other Government.

(iii.) *General Provisions.* An immigrant may be required to pass the dictation test at any time within two years after he has entered the Commonwealth. This applies particularly to coloured persons, but any immigrant found within three years of entering the Commonwealth to be suffering from a prohibitory disease or defect may be deemed to be a prohibited immigrant unless it is proved to the Minister's satisfaction that he was free from the disease or disability at the time of his arrival in Australia.

A prohibited immigrant within the meaning of (a) above may, at the discretion of an officer, be allowed to enter the Commonwealth, or to remain within it, upon depositing £100 and within thirty days either obtaining an exemption certificate or departing from the Commonwealth; in either case the deposit is returned.

The punishment for breach of the Act by a prohibited immigrant is imprisonment for six months and deportation in addition to or in substitution for such imprisonment, if so ordered.

**4. Liability of Shipmasters and Others.**—The master, owners, agents, and charterers of a vessel from which a prohibited immigrant enters the Commonwealth are jointly and severally liable to a penalty not exceeding £100 for each entrant. The vessel may be detained as security, but may be released upon the giving of a bond with two sureties for the payment of any penalties; the vessel may be seized and sold in default of payment of penalties. The master, owners, agents, and charterers may be required to provide a return passage for the prohibited immigrant, and to pay for his maintenance during his detention prior to deportation. Masters of vessels are authorised to prevent such a person from landing and to obtain any necessary assistance.

Under the Immigration Restriction Act 1908, any person on board a vessel at the time of her arrival from any place outside Australia at any port in Australia who is not (a) a *bonâ fide* passenger of the vessel, or (b) a member of the crew of the vessel whose name is on the articles, is deemed to be a stowaway, unless the master gives notice that the person is on board the vessel, and does not permit him to land until an officer has had an opportunity of satisfying himself that the person is not a prohibited immigrant. The master, owners, agents, and charterers of a vessel are jointly and severally liable to a penalty of £100 for each stowaway brought in to any port in Australia. The Immigration Act 1912 provides for a penalty of £200 for each stowaway in cases where the master has been convicted of a similar offence within the preceding twelve months. Power is given to search vessels for stowaways. The Immigration Restriction Act 1910 provides penalties for being concerned in bringing immigrants secretly to the Commonwealth.

**5. Agreements with other Countries.**—Arrangements may be made with the Government of any country regulating the admission into Australia of the subjects or citizens of such country, such subjects not being, during the subsistence of the arrangement, required to pass the dictation test.

Persons who have resided either continuously or from time to time in the Commonwealth for a period of five years in the whole, and who are about to depart from it, being persons who, if they return, would be prohibited immigrants, may obtain a certificate of exemption entitling them to return.

Certificates of exemption are granted by the Minister of External Affairs, whose department administers the Act, and also by the Collector of Customs in each State.

**6. Statistics.**—The following tables shew the number of persons who desired but were not permitted to land, those who were allowed to land, and the nationality of the persons admitted.

**PERSONS ADMITTED OR REFUSED ADMISSION TO COMMONWEALTH UNDER  
PROVISIONS OF IMMIGRATION RESTRICTION ACT, 1905 to 1913.**

(a) Three persons were admitted, after passing the test, in 1905, and one in each of the years 1908 and 1909. (b) No persons were admitted after passing the test in this year. (c) Not specified. (d) Bulgarians. (e) Including 63 Timorese. (f) Including 142 Timorese.

The following table has been prepared, shewing to what extent immigration has taken place into the several States of the Commonwealth from 1905 to 1913:—

### IMMIGRATION INTO THE SEVERAL STATES OF THE COMMONWEALTH, 1905-1913.

| Year. | N.S.W. | Victoria. | Q'land. | S. Aust. | W. Aust. | Tas.  | N.T. | C'wealth. |
|-------|--------|-----------|---------|----------|----------|-------|------|-----------|
| 1905  | 28,323 | 9,545     | 1,946   | 1,843    | 4,386    | 1,718 | 179  | 47,940    |
| 1906  | 35,987 | 10,555    | 2,459   | 1,909    | 4,798    | 1,801 | 137  | 57,646    |
| 1907  | 46,022 | 12,314    | 3,862   | 2,544    | 4,839    | 2,380 | 128  | 72,089    |
| 1908  | 48,068 | 12,840    | 4,474   | 2,788    | 5,142    | 2,171 | 187  | 75,670    |
| 1909  | 51,170 | 13,602    | 6,720   | 3,169    | 6,343    | 2,172 | 148  | 83,324    |
| 1910  | 53,029 | 14,942    | 10,353  | 3,988    | 9,881    | 2,168 | 182  | 94,543    |
| 1911  | 69,640 | 21,488    | 17,778  | 7,039    | 18,386   | 4,563 | 126  | 139,020   |
| 1912  | 86,239 | 34,568    | 11,820  | 10,035   | 16,624   | 4,480 | 224  | 163,990   |
| 1913  | 73,946 | 29,121    | 10,496  | 8,220    | 15,985   | 2,350 | 133  | 140,251   |

## § 2. Patents, Trade Marks, and Designs.

1. **Devolution of Jurisdiction upon the Commonwealth.**—Prior to the establishment of Federation, and for a few years thereafter, each Australian State possessed independent jurisdiction in respect of patents, copyrights, trade marks, and designs, and had, with the exception of Tasmania in regard to copyrights, enacted its own laws. Any person, therefore, who desired to obtain the grant of a patent, or the registration of any copyright, trade mark, or design had necessarily, with the exception aforesaid, to incur the trouble and expense of making separate applications. The Commonwealth Constitution Act conferred upon the Federal Parliament power to legislate respecting these matters. (See page 26 hereinbefore.) The Patents Act of 1909 applied the laws relating to patents for inventions to the Territory of Papua.

The State Acts, though in general based upon the Imperial Statutes dealing with these subjects, were not wholly governed by them. The Commonwealth Acts, both in regard to principle and practice, have the same general foundation as the Imperial Statutes, but in some respects have been modified and brought into line with the totality of Australian experience.

2. **Patents.**—The first Commonwealth Patents Act was passed in 1903, and was amended in 1906, 1909, and 1910. (See page 44 hereinbefore.) Under these Acts, which are administered by a "Commissioner of Patents," the powers and functions vested under the States Acts became vested in the Commonwealth. A single Commonwealth patent now gives throughout the Commonwealth and the Territory of Papua that protection which formerly could only be obtained by procuring a patent in each State and the said Territory. The rights of State patentees or the patentees in the Territory of Papua are in all cases reserved to them. The holder of a State patent in force may obtain, for period not exceeding the unexpired time thereof, a Commonwealth patent for the invention comprised in the State patent, provided however, that any State other than the State in which the patent under the States Patent Act was granted may be excepted from the patent if the Commissioner of Patents is satisfied that the invention either (a) is not novel, (b) has been made the subject of a pending application, or (c) has been published, in such State. Comparatively small fees, totalling £8, are now sufficient to obtain for an inventor protection throughout the Commonwealth and the Territory of Papua, and the only renewal fee (£5) is payable before the expiration of the seventh year of the patent, or within such extended time, not exceeding one year, and upon payment of further fees as may be allowed.

(i.) *Applications for Patents.* Any of the following persons may make application for a patent:—(a) The actual inventor. (b) His assignee, agent, attorney, or nominee. (c) The actual inventor or his nominee jointly with the assignee of a part interest in the invention. (d) The legal representative of a deceased actual inventor or of his assignee. (e) Any person resident in the Commonwealth to whom the invention has been communicated by the actual inventor, his legal representative, or assignee (if the actual inventor, his legal representative, or assignee is not resident in the Commonwealth). An application for a patent must be for one invention only, and must be made in the form prescribed, and lodged by being left at or sent by post to the Patent Office at Melbourne. It must be accompanied by either a provisional or a complete specification. The application must contain a declaration in the prescribed form setting out the facts relied on to support the application, and must be signed by the applicant before a witness.

(ii.) *Term for which Granted.* The term for the duration of every patent is limited to fourteen years from the date of application. A patent ceases if the patentee fails to pay the renewal fee within the prescribed time.

(iii.) *Opposition to Grant of Patent.* Within three months of the advertisement of the acceptance of a complete specification, or within such further time, not exceeding one month, as the Commissioner on application made within the three months allows, any person may give notice at the Patent Office of opposition to the grant on any of the following grounds:—(a) That the applicant has obtained the invention from the opponent or from a person of whom he is the legal representative or assignee or nominee. (b) That the invention has not been communicated to the applicant by the actual inventor, his legal representative or assignee (if the actual inventor, his legal representative or assignee is not resident in the Commonwealth). (c) That the invention has been patented in the Commonwealth on an application of prior date or has been patented in a State. (d) That the complete specification describes or claims an invention other than that described in the provisional specification, and that the opponent has applied for a patent for such other invention in the interval between the leaving of the provisional and complete Specifications. (e) Want of novelty. (f) Prior publication.

The case is heard and decided by the Commissioner, from whose decision an appeal lies to the High Court or to the Supreme Court of the State in which the Patent Office is situated.

(iv.) *Single Patent for Cognate Inventions, etc.* The provisions of the Act relative to single patents for cognate inventions, patents of addition and revocation of patents will be found in detail in previous issues of the Year Book. (See No. 6, p. 1163.)

(v.) *Compulsory Working and Licenses.* At any time not less than four years after the date of a patent, and not less than two years after the 13th December, 1911, any person may apply to the High Court or the Supreme Court of the State in which the Patent Office is situated for an order declaring that the patent article or process is not manufactured or carried on to an adequate extent in the Commonwealth. From and after the time when any such order may take effect, the patent is not deemed to be infringed by the manufacture or carrying on in the Commonwealth of the patented article or process, or by the vending within the Commonwealth of the patented article made within the Commonwealth. Any person interested may, after the expiration of two years from the granting of the patent, present a petition to the Commissioner alleging that the reasonable requirements of the public with respect to a patented invention have not been satisfied and praying for the grant of a compulsory license or, in the alternative, for the revocation of a patent. If the parties do not come to an arrangement between themselves, the Commissioner, on being satisfied that a *prima facie* case has been made out, must refer the petition to the High Court or the Supreme Court of the State in which the Patent Office is situated. If the Commissioner is not satisfied that a *prima facie* case has been made out he may dismiss the petition.

(vi.) *Restoration and Surrender of Patents, and Contracts and Proceedings.* The provisions of the Act with reference to restoration and surrender of patents, contracts, etc., are given in detail in previous issues of the Year Book. (See No. 6, p. 1164).

(vii.) *International Protection of Patents.* The Patents Act contains provisions under which the international arrangements for the protection of patents contained in the Imperial Acts could be made applicable to the Commonwealth by order of the King-in-Council. Applicants for patents, subject to the country in which first application is made being a party to the arrangement, are now, if they apply in Australia within twelve months of their first foreign application, entitled to make application for patents for their inventions in priority to other applicants, and such patents have the same date as the date of the first application abroad. Corresponding arrangements have also been made by the Commonwealth with New Zealand.

(viii.) *Patent Attorneys.* Any person on passing the prescribed examination, and on paying a fee of £5, may be registered by the Commissioner as a patent attorney. A solicitor may practise as a patent attorney without passing the prescribed examination and without being registered as a patent attorney. No person may describe himself as a patent attorney, or as a patent agent, or as an agent for obtaining patents unless he is registered or entitled to practise as a patent attorney.

(ix.) *Patent Office Publications.* Complete specifications are printed shortly after they become open to public inspection by advertisement of acceptance, or under Section 121 of the Act, provided the complete specification is not accepted and advertised. Each specification is open to public inspection. A number of publications, of which a list may be found in the Australian Official Journal of Patents, is on sale at the Government Printing Office, Melbourne.

The *Australian Official Journal of Patents* is issued weekly, and contains lists of applications and proceedings, with illustrated notes of accepted complete specifications. A supplementary annual volume contains statistics, indexes to names of persons concerned, classified indexes to subject matter of applications lodged, and a numerical index to proceedings on Commonwealth applications which have been advertised during the year; there are also names and number indexes to proceedings on State applications.

(x.) *Applications Filed, Provisional Specifications Accepted, and Letters Patent Sealed.* The numbers of individual inventions in respect of which applications were filed in the States or Commonwealth during each year from 1907 to 1913 inclusive are shewn in the following table. The number of applications accompanied by provisional specifications and the number of patents sealed in respect of applications made in each year are also shewn.

**PATENTS.—APPLICATIONS FILED AND LETTERS PATENT SEALED IN THE  
COMMONWEALTH, 1907 to 1913.**

| Year ... ..   | 1907. | 1908. | 1909. | 1910. | 1911. | 1912. | 1913.  |

| ... .. accompanied by provisional specifications ... .. | 1,678 | 1,811 | 2,165 | 2,294 | 2,290 | 2,273 | 2,626  |
| Letters patent sealed during each year ... ..           | 1,402 | 1,630 | 1,269 | 1,552 | 2,027 | 1,502 | 1,495* |

\* Up to the 30th December, 1913.

(xi.) *Revenue of Patent Office.* The revenue of the Commonwealth Patent Office for each year from 1907 to the end of the year 1913 is shewn in the subjoined table :—

REVENUE OF COMMONWEALTH PATENT OFFICE, 1907 to 1913.

| Particulars.                   | 1907.  | 1908.  | 1909.  | 1910.  | 1911.  | 1912.  | 1913.  |
|--------------------------------|--------|--------|--------|--------|--------|--------|--------|
| Fees collected under ,         | £      | £      | £      | £      | £      | £      | £      |
| States Patents Acts ...        | 3,746  | 2,006  | 1,703  | 1,940  | 768    | 118    | 50     |
| Patents Acts 1903-10 ...       | 13,612 | 14,146 | 14,087 | 17,042 | 19,640 | 18,542 | 18,800 |
| Receipts from publications ... | 155    | 146    | 216    | 208    | 237    | 305    | 283    |
| Petty receipts ...             | 34     | 32     | 33     | 33     | 48     | 50     | 49     |
| Total ...                      | 17,547 | 16,330 | 16,039 | 19,223 | 20,693 | 19,015 | 19,182 |

3. **Trade Marks.**—The remarks made concerning the unification of the patent system of the Commonwealth apply equally to trade marks. Under the Trade Marks Act 1905, which came into force on the 2nd July, 1906, the Commissioner of Patents is appointed to act also as “Registrar of Trade Marks.” The Trade Marks Act of 1905 was amended by the Patents, Trade Marks, and Designs Act 1910, assented to on the 14th November, 1910, and by the Trade Marks Act 1912, and is now cited as The Trade Marks Act 1905-1912. The principal objects of the amending Act were to enlarge the scope of marks capable of registration, and repeal the provisions of the Act of 1905 relating to the “Workers Trade Mark,” the provisions regarding which were held to be unconstitutional. Special provisions for the registration of a “Commonwealth Trade Mark” are contained in the Act of 1905 and are applicable to all goods included in or specified by a resolution passed by both Houses of Parliament that in their opinion the conditions as to remuneration of labour in connection with their manufacture are fair and reasonable.

(i.) *Essential Particulars of Trade Marks.*—

Section 15. “A registrable trade mark shall consist of essential particulars with or without additional matter.”

Section 16. (1) “A registrable trade mark must contain or consist of at least one of the following essential particulars:—(a) The name of a company, individual, or firm represented in a special or particular manner; (b) the signature of the applicant for registration or some predecessor in his business; (c) an invented word or invented words; (d) a word or words having no direct reference to the character or quality of the goods, and not being according to its signification a geographical name or a surname; (e) any other distinctive mark, but a name, signature, or word or words, other than such as fall within the descriptions in the above paragraphs (a), (b), (c) and (d) shall not, except by order of the Registrar, Law Officer, or Court, be deemed a distinctive mark.”

(2) “For the purposes of this section ‘distinctive’ means adapted to distinguish goods of the proprietor of the trade mark from those of other persons.”

(3) “In determining whether a trade mark is so adapted, the Registrar, Law Officer, or Court may, in the case of a trade mark in actual use, take into consideration the extent to which such user has rendered such trade mark in fact distinctive for the goods with respect to which it is registered or proposed to be registered.”

(ii.) *State Registrations.* State registrations cease to be in force at the expiration of fourteen years from the date of the Commonwealth Act, or at the time when, under the State Trade Marks Act, the trade mark would, if after the commencement of the Commonwealth Act no fee for the continuance of its registration were paid, first become liable to removal from the register, whichever first happens. It is also provided that no fee shall be receivable nor shall any act be done after the commencement of the Commonwealth Act for the continuance of the registration of a trade mark under a State Act. Commonwealth registration of a State registered mark may be effected, and the fact of its registration in a State prior to the coming into force of the Commonwealth Act, may entitle the registered proprietor in the State to Commonwealth registration, notwithstanding the existence of defects which might be ground for refusal of an application for the registration of a new trade mark.

(iii.) *Duration of Registration and General Provisions.* The registration of a trade mark is for a period of fourteen years, but may be renewed from time to time. International and intercolonial arrangements for the mutual protection of trade marks may be made in a manner similar to that provided for the protection of patents. In this regard Australia has become a party to the International Convention for the protection of industrial property. Registration may be opposed by any person lodging a notice of opposition at the Trade Marks Office within three months after the advertisement of the application, or such further time, not exceeding three months, as may, on application made within the first three months, be allowed.

(iv.) *Publications.* The *Australian Official Journal of Trade Marks* is issued weekly, and contains lists of applications and proceedings, with representations of marks (when accepted) sought to be registered. *Designs.* Lists of registered owners of designs and the subject matter of applications are published weekly in the official Journal of Trade Marks. Indexes to names of applicants and subject matter of applications are compiled and are on sale.

**4. Designs.**—The Designs Act of 1906 came into operation on the 1st January, 1907, being subsequently amended by the Patents, Designs and Trade Marks Acts 1910, and the Designs Act 1912, and is now cited as the Designs Act 1906-12. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed "Registrar of Designs."

(i.) *Registration.* Any new and original design which has not been published in Australia before the lodging of an application for its registration may be registered in respect of all or any of the articles enumerated in the classification contained in the regulations, which comprise jewellery, paperhangings, carpets, floor-cloths, lace, hosiery, millinery, wearing apparel, textile fabrics, bookbinding, and articles composed wholly or chiefly of a variety of solid substances. A separate application must be made in respect of each class in which the owner of the design desires it to be registered. After an application for the registration of a design has been lodged the design may be published and used without prejudice to the validity of the registration.

(ii.) *Duration of Copyright in Designs.* The registration takes effect as from the date of the lodging of the application, and, subject to the provisions of the Act, remains in force for a period of five years from that date. Provision is made by the amending Act of 1912 for an extension of the period of registration to 15 years, subject to applications for extension being made and the prescribed fees paid before the expiration of 5 and 10 years respectively. The owner of a registered design must within two years after registration, substantially use the design, or cause it to be used, in Australia, and if he fails to do so the copyright ceases. If, however, such design is used in any manufacture abroad, the above period is limited to six months.

(iii.) *General.* The Act also contains provisions regarding the remedies for infringement of designs and the rectification of the register. Arrangements for the international and intercolonial protection of copyright in designs were made by the same proclamation referred to above with regard to patents and trade marks. The owner of a registered design must cause each article to which the design is applied to be marked before delivery for sale with the prescribed mark to denote that the design is registered.

5. **Applications for Trade Marks and Designs.**—The following table gives particulars of trade mark and design applications received and registered under the Commonwealth Acts from 1908 to 1913 inclusive:—

**TRADE MARK AND DESIGN APPLICATIONS RECEIVED AND REGISTERED  
UNDER COMMONWEALTH ACTS, 1908 to 1913.**

| Applications. |     |     |     | 1908. | 1909. | 1910. | 1911. | 1912. | 1913. |
|---------------|-----|-----|-----|-------|-------|-------|-------|-------|-------|
| RECEIVED.     |     |     |     |       |       |       |       |       |       |
| Trade Marks   | ... | ... | ... | 1,580 | 1,688 | 1,729 | 1,977 | 1,803 | 1,957 |

### § 3. Copyright.

1. **Copyright Legislation.**—Prior to the 1st January, 1907, the date on which the Commonwealth Copyright Act of 1905 came into operation, the subject of copyright was regulated by the laws of the separate States. In general, the State Laws were under the like provisions of the Imperial Copyright Law, including the Law of 1842 and the earlier unrepealed or subsequent Acts, the most important of which were the Colonial Copyright Act 1847 and the International Copyright Act of 1886. They were also generally included under British international relations embracing the Berne-Paris provisions of the International Copyright Union and the reciprocal relations with the United

States of America, but, with the exception that in the Austria-Hungary Treaty, New South Wales and Tasmania were not parties, because they did not exercise the right of ratification especially reserved to individual colonies.

Though the Commonwealth Copyright Act of 1905 took the place of the State Copyright Acts formerly in force, it left unaffected existing rights under the State Laws, but transferred the administration thereof to the Commonwealth. Provision was also made under the Law of 1905 for the registration of International and State Copyrights. In order to obtain local, as distinguished from British or Imperial, protection, the Act required that a book must have been "printed from type set up in Australia, or plates made therefrom, or from plates or negatives made in Australia in cases where type is not necessarily used," and published in Australia, after the commencement of the Act, before or simultaneously with its first publication elsewhere. The "Common Law of England" was specifically applied to unpublished literary compositions. Artistic works were not protected in Australia under either the Commonwealth Act of 1905 or Imperial Law unless "made in Australia."

Copyright in the case of literary works endured for a period of forty-two years from the date of first publication, or the life of the author or the last surviving joint-author and seven years thereafter, whichever was the longer. If, however, first publication of a book took place after the death of the author the duration of copyright was limited to forty-two years. *Performing right and lecturing right subsisted separately for a like period from first public performance or delivery simultaneously with first public performance or delivery elsewhere.* But the lecturing right ceased when the lecture was published as a book. Copyright in artistic works subsisted for the term of forty-two years from the date of the making thereof, or for the author's life and seven years, whichever was the longer.

Provision was also made for the assignment of copyright, performing right, and lecturing right, either wholly or in part, and either generally or limited to any particular place or period, and owners of any of the rights specified could grant any interest therein by licence; but such an assignment or grant would not be valid unless it was in writing, signed by the owner of the right.

The Act of 1905 prohibited the importation of all pirated books or artistic works "in which copyright is subsisting in Australia (whether under this Act or otherwise)," and provided for the forfeiture of such works, on condition of written notice of the copyright by the owner of the copyright or his agent to the Minister, directly or through the Commissioners of Customs of the United Kingdom.

Registration of any copyright, performing right, or lecturing right was required as a prerequisite for legal action, but copyright and performing right existed, and in some cases could be enforced, without registration.

**2. The Copyright Act of 1912.**—The Copyright Act of 1905 was repealed by the Copyright Act of 1912, which was assented to and became operative on 20th November, 1912. Subject to modifications relating to procedure and remedies, the Commonwealth Law of 1912 adopted the British Copyright Act of 1911, and declared the latter law to be in force within the Commonwealth as from the 1st July, 1912. The British Act extends throughout the whole of His Majesty's dominions, but is not to be in force in a self-governing dominion unless enacted by the legislature thereof either in full or with modifications relating exclusively to procedure and remedies necessary to adapt the Act to the circumstances of the dominion.

Under the Commonwealth Law of 1912, copyright subsists in "every original literary, dramatic, musical, and artistic work," first published within parts of His Majesty's dominions to which the British Copyright Act of 1911 extends, and in the case of an unpublished work, the author of which was "at the date of the making of the

work," a British subject or a resident domiciled within the aforesaid parts of His Majesty's dominions (or under protection through international copyright provisions). The old Common Law right is abrogated by the Act of 1912, and all copyright property is now the creature of statute from the date when it takes shape, either written in words or in some other material form.

Copyright is defined to mean the sole right to produce or reproduce the work or any substantial part thereof in any material form whatsoever, or any translation thereof, to publish, perform, or deliver the work in public, to dramatize or novelize it, and in the case of a literary, dramatic, or musical work, to make any record, cinematograph film or other contrivance by means of which it may be mechanically performed or delivered, or to authorize any of such acts. Architectural works of art are included as to design, but not as to process or methods of construction.

Copyright in a musical work also includes the sole right to make any record, perforated roll, or other contrivance by means of which the work may be mechanically performed or delivered, and to authorize any of such acts. Conditions governing the making of mechanical contrivances of musical works published before and after the commencement of the British Act are separately prescribed. In the case of a musical work published after the commencement of said Act, if the work has already been mechanically performed with the consent of the owner of the copyright, then anyone can make mechanical contrivances for reproducing it by giving the notice and paying royalties as prescribed. But such contrivances must not alter or omit anything from such work unless similar alterations have been made by the author himself, or they are reasonably necessary for the adaptation of such contrivance. In the case of a musical work published before the commencement of the British Act, certain modifications are prescribed.

The author of a work is the first owner of the copyright therein, except in the case of mechanical contrivances made before the commencement of the Act, or where an engraving, photograph, or portrait is executed on commission, or "where the author was in the employment of some other person under a contract of service or apprenticeship, and the work was done in the course of his employment by that person." Copyright in Government publications vests in the Crown.

The owner may assign the copyright "either wholly or partially, and either generally or subject to limitations to the United Kingdom, or any self-governing dominion or other part of His Majesty's dominions to which the British Copyright Act extends, and either for the whole term of the copyright or for any part thereof, and may grant any interest in the right by licence, but no such assignment or grant shall be valid unless it is in writing signed by the owner of the right in respect of which the assignment or grant is made, or by his duly authorized agent." In the case of partial assignment, the original owner and the assignee become respectively the owners of the residual and assigned portions of the copyright. But an assignment, except by will, becomes null and void twenty-five years after the death of the author, when the entire right reverts to his heirs.

Copyright subsists during the life of the author and fifty years after his death, provided that at any time after the expiration of twenty-five years, or in the case of a work subsisting at the date of the passing of the Imperial Copyright Act 1911 (*i.e.*, 16th December, 1911), thirty years after, anyone on giving the requisite notice and paying royalties of ten per cent. on the published price has the right to publish the work. In the case of works of joint authorship, copyright subsists during the life of the author who dies first and for a term of fifty years afterwards, or during the life of the author who dies last, whichever period is the longer. In the case of posthumous works, copyright subsists for fifty years from first publication or performance, whichever is the earlier. Photographs are protected for fifty years from the date of the making of the original

negative, and records, perforated rolls, etc., for mechanical musical instruments for fifty years from the date of making of the original plates. Copyright in Government publications subsists for a period of fifty years from the date of first publication.

Works in which copyright subsisted immediately before the commencement of the British Act, *i.e.*, 1st July, 1912, shall, as from that date, be entitled to the substituted rights prescribed by the Act, including the extended term. The Act also reserves (in default of compensation by the person entitled to restrain production or performance) to anyone who has before the 26th July, 1910, incurred any expenditure or liability in connexion with a then lawful production or performance of a work, any rights or interests arising therefrom, which were subsisting and valuable.

The Commonwealth Copyright Act of 1912 prohibits the importation of pirated literary, dramatic, musical, and artistic works on conditions similar to those prescribed by the repealed Law of 1905.

The owner of any original literary, dramatic, musical, or artistic copyright under the Commonwealth Law, or of the sole right to perform, or authorize the performance, of any musical or dramatic work in the Commonwealth or any part thereof, may obtain registration of his right, on filing an application in the prescribed form at the Copyright Offices, Commonwealth Offices, Melbourne.

**3. Applications for Copyright.**—The following table gives particulars of copyright applications received and registered under the Commonwealth Acts from 1909 to 1913 inclusive:—

**COPYRIGHT APPLICATIONS RECEIVED AND REGISTERED UNDER COMMONWEALTH ACTS, 1909 to 1913.**

| Year.                           | Copyrights. |           |                          |        |
|---------------------------------|-------------|-----------|--------------------------|--------|
|                                 | Literary.   | Artistic. | International and State. | Total. |
| <b>APPLICATIONS RECEIVED.</b>   |             |           |                          |        |
| 1909                            | 474         | 518       | 14                       | 1,006  |
| 1910                            | 464         | 569       | 6                        | 1,039  |
| 1911                            | 440         | 466       | 15                       | 921    |
| 1912                            | 463         | 415       | 8                        | 886    |
| 1913                            | 505         | 340       | ...                      | 845    |
| <b>APPLICATIONS REGISTERED.</b> |             |           |                          |        |
| 1909                            | 412         | 527       | 4                        | 943    |
| 1910                            | 361         | 495       | 12                       | 868    |
| 1911                            | 379         | 412       | 11                       | 802    |

The revenue from copyright for the years 1911, 1912 and 1913 was £143, £145 and £169 respectively.

In addition to the applications for copyright received and registered under the Commonwealth Act, certain applications for registration under State Acts were received and registered. The following table gives particulars of such applications for the years 1909 to 1913:—

#### § 4. Old-age and Invalid Pensions.

1. **General.**—A system for providing for the relief of the aged poor by some means which did not involve the stigma associated in so many minds with the idea of charitable aid, and which, while protecting the recipients from actual want, still left to them as large a degree of freedom as possible, has long been sought for by economists, statesmen, and social reformers. The difficulties surrounding a satisfactory solution of the question are numerous and great, and various schemes have been propounded with the object of overcoming them. Two of the principal objections which have been urged against the introduction of a general system of old-age pensions are—

- (i.) its costliness;
- (ii.) its tendency to induce thriftlessness.

The former is undoubtedly a serious difficulty, since in any normally constituted population the number of persons aged say sixty-five years and upwards will represent about 5 per cent. of the total population, and the provision of the funds required to pay to these a sum which would provide them with even the barest necessities of life would be a very considerable burden upon the State Treasury. To reduce this burden various suggestions have been made, of which probably the most effective have been those which provide, the one for a contribution to the pension fund by the pensioner during his earlier years, and the other for a reduction of the amount of pension payable to those in receipt of income from other sources. The former of these is the principle which has been acted upon in the scheme in operation in Germany, while the latter is that which underlies the schemes in vogue in the Commonwealth, New Zealand, and the United Kingdom.

The objection which has sometimes been raised to the payment of old-age pensions on the score of the tendency to thriftlessness thereby induced is one which, in Australia, at all events, is not accorded much weight, the general feeling being that the number of cases in which the prospect of a pension of, say, 10s. per week from sixty-five onwards would lead to thriftlessness in earlier years, is so small as to be practically negligible.

**2. Introduction of Old-age Pensions into Australia.**—The credit of introducing old-age pensions into the Southern Hemisphere belongs, not to the Commonwealth, but to her sister dependency, the Dominion of New Zealand, where pensions have been payable since 1st April, 1898. The first State of the Commonwealth to make provision for the payment of old-age pensions was Victoria, whose legislation on the subject came into operation on 18th January, 1901. Later in the same year, viz., on 1st August, 1901, the pension system of New South Wales came into force, while in the case of Queensland old-age pensions became payable from 1st July, 1908. Finally, an Act providing for the payment of old-age pensions throughout Australia was passed by the Commonwealth Parliament in 1908, pension payments thereunder commencing on 1st July, 1909. This Act superseded the State Acts in so far as provision for old age is concerned.

**3. Commencement of Commonwealth Act.**—The Commonwealth Invalid and Old-age Pensions Act was assented to on the 10th June, 1908, and payment of old-age pensions commenced as from 1st July, 1909. Provision is also made in the Act for the payment of invalid pensions. The part of the Act relating thereto, however, did not come into operation on the commencement of the Act, but it was provided that it should commence on some subsequent date to be fixed by proclamation. This proclamation was made on the 19th November, 1910, the first payments thereunder being made on the 15th December, 1910.

**4. Administration of Commonwealth Act.**—The general administration of the Act is, subject to the control of the Minister, placed in the hands of the Commissioner of Pensions, who is assisted by a Deputy Commissioner appointed in each State. Power is given to the Commissioner and the Deputy Commissioners to summon witnesses, receive evidence on oath, and require the production of documents for the purposes of the Act.

Each State is divided into districts, each of which is placed in charge of a Registrar, whose duties consist in receiving and investigating pension claims and in keeping such books and registers as are required for carrying out the provisions of the Act.

**5. Pension Age.**—For an old-age pension the age qualification is similar to that previously in force in New South Wales under the State Act, viz., attainment of the age of sixty-five years, or, in the event of permanent incapacitation for work, attainment of the age of sixty years. The Act also provides that the age qualification for women may be fixed by proclamation at sixty years instead of sixty-five. This proclamation was made on the 19th November, 1910, the first payments thereunder being made on the 15th December, 1910. For an invalid pension the age qualification is attainment of the age of sixteen years if accompanied by permanent incapacitation for work.

**6. Length of Residence.**—In the original Act of 1908 the residential qualification for an old-age pension was the same as that of the New South Wales Act, viz., continuous residence for twenty-five years. Owing, however, to the fact that in the other two States in which pensions were payable under the State régime the residential qualification was only twenty years, an amendment of the Act was passed by the Federal Parliament in August, 1909, reducing the Commonwealth term to twenty years also, thus rendering impossible the chance of lapse of pension through transfer from State to Commonwealth. For an invalid pension continuous residence for at least five years is required. In neither case, however, is continuous residence in Australia deemed to have been interrupted by occasional absences not exceeding in the aggregate one-tenth of the total period of residence. The applicant for any pension must be residing in Australia on the date when he makes his claim, and in the case of an invalid pension must have been incapacitated while in Australia.

**7. Rates of Pension.**—The rate of pension payable, whether for old age or invalidity, is required by the Act to be determined by the Commissioner or one of the Deputy Commissioners, and is to be fixed at such amount as he deems reasonable and sufficient, having regard to all the circumstances of the case, but must not exceed £26 per annum in any event, nor be at such a rate as will make the pensioner's income, together with pension, exceed £52 per annum.

**8. Limitations in respect of Income and Property.**—With a view to restricting the pensions to persons *actually needing assistance*, provision was made in all the State Acts reducing the payment when the applicant already possessed income or property above a given amount. This principle is also embodied in the Commonwealth Act. In the case of independent income it has already been mentioned that the pension payment must be so modified that the aggregate income, inclusive of pension, does not exceed £52 per annum. Payments received by way of benefit from any registered friendly society, or during illness, infirmity, or old age from any trade union, provident society, or other society or association, are not, for the purposes of the Commonwealth Act, treated as income. As regards accumulated property, the pension is subject to a deduction of £1 per annum for every complete £10 by which the net capital value of the property exceeds £50. Also, if both husband and wife are pensioners (except when they are living apart pursuant to any decree, judgment, order, or deed of separation), the deduction in the case of each of them shall be £1 for every complete £10 by which the net capital value of the accumulated property exceeds £25. From the capital value of accumulated property is deducted the capital value of a home in which the pensioner permanently resides, and all charges and encumbrances existing on the property, other than the home. Accumulated property whether in or out of Australia, to the value of £310 or upwards will disqualify for a pension, as will also an applicant's direct or indirect deprivation of himself of such property with the object of obtaining a pension. In the case of husband and wife, except where they are living apart pursuant to any decree, judgment, order or deed of separation, the net capital value of the accumulated property of each is deemed to be half the total net capital value of the accumulated property of both, and the amount of property in such case allowed prior to deduction is £50 if including, and £25 if not including a home.

**9. Character of Applicant for Pension.**—In all the State Acts provision was made that the recipients of old-age pensions should be persons of good moral character, and, in New South Wales and Victoria, imprisonment for extended periods would act as a disqualification. In the Commonwealth Act it is also provided that "no person shall receive an old-age pension unless he is of good character," but a similar provision is not made in the case of invalidity.

**10. Number of Commonwealth Claims and Old-age Pensions.**—During the first year of practical working of the Commonwealth Act, viz., that ended 30th June, 1910, the number of cases considered was 76,168. Of these 39,875 were cases in which a State old-age pension was exchanged for one payable by the Commonwealth. The remaining 36,293 were new applications received during the year, of which 30,526 were granted, 3921 were rejected, and 1846 were still in course of consideration on 30th June, 1910. During the year ending 30th June, 1911, a further number of 20,260 were considered.

Details of the several States as at 30th June, 1913, are as follows :—

COMMONWEALTH OLD-AGE PENSIONS, YEAR ENDED 30th JUNE, 1913.

**16. Cost of Administration.**—Under the State régime the cost of administration differed considerably in the several States, and for 1908-9 represented in New South Wales 4.17 per cent. of the amount actually paid in pensions. In Victoria for the same year the corresponding percentage was 0.70. During the year 1912-13 the total cost to the Commonwealth of administering the Old-age and Invalid Pensions Department was £44,523, or nearly 2 per cent. of the amount actually paid in pensions. Details concerning the cost of administration for 1912-13 are as follows:—

|   | £             |
|---|---------------|
| Salaries ... ..   | 13,715        |
| Temporary assistance ... ..   | 1,837         |
| Services of magistrates, registrars, clerks of courts, and police ... | 5,044         |
| Commission to Postmaster-General's Dept., at 12s. 6d. per £100 paid   | 13,775        |
| Postage and telegrams ... ..  | 2,843         |
| Other expenses ... ..   | 7,309         |
|   | <u>44,523</u> |

The actual sum disbursed in Old-age and Invalid Pensions in the financial year 1912-13, apart from the cost of administration, was approximately £2,289,048.

**17. Liability Undertaken in Granting Old-age Pensions.**—As an indication of the extent of the responsibility which an old-age pension scheme involves, it may be mentioned that in connection with the evidence tendered to the Commonwealth Commission on Old-age Pensions a computation was made of the total liability in respect of accrued pensions which the Commonwealth would have incurred if, at 31st March, 1901, the date of the Census, 39 per cent. of the persons aged sixty-five and upwards were entitled to pensions of ten shillings per week. The present value at that date of the liability so computed was £10,415,820. (See Minutes of Evidence of Royal Commission on Old-age Pensions, p. 80.)

The following table gives detailed statistical information concerning the working of the Act since 1st July, 1910:—

## INVALID AND OLD-AGE PENSIONS SUMMARY.

| Financial Year ended 30th June. | Number of Pensioners. |          |        | Amount Paid in Pensions. | Amount Paid to Asylums for Maintenance of Pensioners. | Total Payment to Pensioners and Asylums. | Cost of Administration. | Cost of Administration per £100 paid to Pensioners and Asylums. | Average Fortnightly Pension on last day of Financial Year |
|---------------------------------|-----------------------|----------|--------|--------------------------|---|--|-------------------------|---|---|

| 1912                            | 79,071                | 10,763   | 89,834 | 2,148,034                | 7,447   | 2,155,481                                | 41,794                  | 1 18 9 %  | 19 0  |
| 1913                            | 82,943                | 13,739   | 96,682 | 2,289,048                | 13,287  | 2,302,335                                | 44,523                  | 1 18 8 %  | 19 6  |

## § 5. Maternity Allowance.

The Federal Parliament, during the session of 1912, passed an Act (assented to on 10th October, 1912) providing under certain circumstances for the payment of maternity allowances. The scope and main provisions of the Act will be gathered from the following sections and sub-sections, given in full:—

4. "Subject to this Act, there shall be payable out of the Consolidated Revenue Fund, which is hereby appropriated accordingly, a maternity allowance of Five pounds to every woman who, after the commencement of this Act, gives birth to a child, either in Australia or on board a ship proceeding from one port in the Commonwealth or a Territory of the Commonwealth to another port in the Commonwealth or a Territory of the Commonwealth."
5. (1) "A maternity allowance shall be payable in respect of each occasion on which a birth occurs, and the child is born alive, or is a viable child, but only one allowance shall be payable in cases where more than one child is born at one birth."
6. (1) "The maternity allowance shall be payable only to women who are inhabitants of the Commonwealth or who intend to settle therein."
- (2) "Women who are Asiatics or are aboriginal natives of Australia, Papua, or the islands of the Pacific, shall not be paid a maternity allowance."

The following table gives particulars of the working of the Act from 10th October, 1912, when it came into operation, up to 30th June, 1913:—

STATEMENT SHEWING PARTICULARS OF CLAIMS WITH REGARD TO THE  
MATERNITY ALLOWANCE OF £5, FROM 10th OCTOBER, 1912,  
to 30th JUNE, 1913.

| State.                   | Granted. | Rejected. | Under Consideration. | Total. |
|--------------------------|----------|-----------|----------------------|--------|
|                          | No.      | No.       | No.                  | No.    |
| New South Wales ... ..   | 31,045   | 291       | 558                  | 31,894 |
| Victoria ... ..          | 22,796   | 114       | 483                  | 23,393 |
| Queensland ... ..        | 12,130   | 74        | 188                  | 12,392 |
| South Australia ... ..   | 7,589    | 52        | 118                  | 7,759  |
| Western Australia ... .. | 5,385    | 59        | 236                  | 5,680  |
| Tasmania ... ..          | 3,611    | 29        | 46                   | 3,686  |
| Commonwealth ... ..      | 82,556   | 619       | 1,629                | 84,804 |

The cost of administration for the period under review was £6368 and the amount disbursed in claims was £412,780.

## . Local Option.

1. **General.**—The principles of local option as to the sale of fermented and spirituous liquors have been applied in all the States of the Commonwealth. The last State to adopt these principles was Western Australia, where provision was made for a system of local option by the Licensing Act 1911.

2. **New South Wales.**—The Act in force relating to local option in this State is the Liquor Act 1912, which consolidates the laws relating to publicans, brewers and other persons engaged in the brewing, manufacture or sale of liquor. The local option vote is taken in every electorate on the day fixed for the poll therein at each general election. The option with regard to licenses extends to publichouses, wineshops, and clubs, and the persons entitled to vote are those entered on the Parliamentary electoral rolls. The resolutions to be submitted, and the effects of such resolutions, if carried, are given *in extenso* in previous issues. The first local option vote under the Liquor (Amendment) Act of 1905 was taken at the general election in 1907, and the second at the election in 1910, while the vote in 1913 was taken under the Liquor Act 1912. The following statement shews the number of electorates in which each of the resolutions was carried:—

## NEW SOUTH WALES.—EFFECTS OF LOCAL OPTION VOTES, 1907, 1910 and 1913.

| Particulars.                 | General Election, 1907. |         | General Election, 1910. |         | General Election, 1913. |         |
|------------------------------|-------------------------|---------|-------------------------|---------|-------------------------|---------|
|                              | Elector-ates.           | Votes   | Elector-ates.           | Votes.  | Elector-ates.           | Votes.  |
| <i>Results in favour of—</i> |                         |         |                         |         |                         |         |
| (a) Continuance ...          | 25                      | 209,384 | 76                      | 324,973 | 74                      | 376,793 |
| (b) Reduction ...            | 65                      | 75,706  | 14                      | 38,856  | 15                      | 44,368  |
| (c) No license ...           | Nil                     | 178,580 | Nil                     | 212,889 | Nil                     | 241,402 |

\* One Electorate not available.

3. **Victoria.**—The Acts dealing with the subject of local option as to the sale of fermented and spirituous liquors, and with the compulsory closing of hotels in this State are the Licensing Acts 1890, 1906, and 1907. Other Acts, now repealed, which dealt with the subject, are the Licensing Acts 1876, 1885, and 1888.

The last division of the Act of 1906 relates to the subject of local option; this division, however, does not come into force until the 1st January, 1917. In the meantime, in order to reduce the number of victuallers' licenses in Victoria, a Licenses Reduction Board has been constituted.

(i.) *The Licenses Reduction Board.* Although the operations of this Board are not conducted in accordance with the principles of local option, the duties of the Board are, until the 31st December, 1916, after which date a system of local option comes into force under the Act of 1906, to reduce the number of licenses in excess of the statutory number, and to award compensation according to the scheme provided for by that Act. The Board consists of three members at a salary of £800 per annum each, who may not engage in any business or employment other than the duties of their office as members of the Board. The Board was first appointed on the 21st May, 1907. A Compensation Fund has also been established under the Act, and is raised by means of a compensation fee at the rate of 3 per cent. on the value of liquor purchased by every licensed victualler. The owner of the premises is chargeable with

two-thirds, and the tenant with one-third of the compensation fee. The total amount paid into the Compensation Fund was £48,233 for the year 1907, £48,543 for 1908, £49,300 for 1909, £48,875 for 1910, £51,716 for 1911, £55,275 for 1912, and £58,947 for 1913. When any reduction of licensed premises has been made, the remaining hotels, which will be benefited, are to bear a *pro rata* assessment to make up the amount of license fees lost. The amount so lost up to the end of the year 1913 was £11,680, of which sum £2646 was remitted, and £9034 apportioned among 1852 hotels in proportion to the benefit which, in the opinion of the Board, they will derive from the closing. By an amendment to the Act in 1912, the Board has been given discretion in certain circumstances to allot less than the amount lost. The maximum compensation, which is payable out of the Compensation Fund referred to above, is to be based on the results of the three years preceding the 31st December, 1906, in the case of owners, and of the three years preceding the 31st December, 1905, in the case of licensees. Up to the 31st December, 1913, 710 hotels had been closed by the Board, 198 of this number having surrendered their licenses. In all cases compensation, where claimed, was awarded, the total paid amounting to £344,952, or an average of £486 each. 193 of these hotels were situated in the metropolitan district, while the remaining 517 were in country districts. In one owner's case and 149 licensees' cases no claims for compensation were made. The following table shews particulars of the operations of the Board up to the 31st December, 1913.

**VICTORIA.—OPERATIONS OF LICENSES REDUCTION BOARD, 31st DECEMBER, 1913.**

| Particulars.            | Licenses in December, 1906. |                   |                     | Hotels Deprived of Licenses | Compensation Awarded. |           | Hotels Surrendered. | Compensation Awarded. |           |
|-------------------------|-----------------------------|-------------------|---------------------|-----------------------------|-----------------------|-----------|---------------------|-----------------------|-----------|
|                         | Number in Existence.        | Statutory Number. | * Number in Excess. |                             | Owner.                | Licensee. |                     | Owner.                | Licensee. |
| Metropolitan & Suburban | 1,020                       | 877               | 401                 | 183                         | £ 136,999             | £ 25,303  | 10                  | £ 5,253               | £ 1,124   |
| Country                 | 2,440                       | 1,622             | 976                 | 329                         | 116,661               | 18,008    | 188                 | 37,628                | 3,976     |
| Total ...               | 3,460                       | 2,499             | 1,377               | 512                         | 253,660               | 43,311    | 198                 | 42,881                | 5,100     |

\* In some districts the number of hotels was below the statutory number; in these districts the total number of hotels less than the statutory number was 418.

No reduction of any licensed premises is allowed in any licensing district in which the number of licensed premises is below the statutory number, but new licenses may, until 1917, be granted in such districts provided that a majority of the electors vote in favour of the increase, and that at least one-third of the number of electors on the roll record their votes. The statutory number varies yearly with the change of the population. The number of hotels below the statutory number in the districts referred to for the year 1913 was 737.

Where a deprivation sitting is held before 30th June the Acts specify that a deprived license expiring on or before the 31st December following shall not be renewed. Where the sitting takes place after 30th June the license may be renewed for a period making in all six months from the first day of such sitting. To avoid difficulties on this score the Board holds its deprivation sittings in the first half of the year and its compensation and re-allotment sittings in the second half. Surrenders take effect on the date fixed by the Board at the time of acceptance.

In addition to those scheduled above, the Board, up to the 25th May, 1914, had deprived 62 hotels of their licenses, of which 2 were surrendered, making a grand total of 772.

In previous issues reference has been made to the methods of procedure to be followed on the coming into force of the system of local option on January 1st, 1917.

4. **Queensland.**—The local option clauses of "The Liquor Act of 1912" provide for the following:—

- (i.) The conditions under which new licenses may be granted until the completion of the business of the Licensing Court in April, 1915.
- (ii.) The continuance of the local option clauses of "The Licensing Act of 1885" until the 31st December, 1915.
- (iii.) The institution of a new scheme, under which electors from and after the year 1916 will have the opportunity of voting every three years on the question of reduction of licenses.

(i.) *New Licenses.* With regard to the granting of "new licenses" from the 1st April, 1913, and until the completion of the business of the Licensing Court in April, 1915, it is provided that no new licensed victualler's or wine seller's or provisional licenses shall be granted, unless at a local option vote of the electors of the local option area in which the premises or proposed premises are situated, a resolution "that new licenses shall be granted in this local option area" has been carried.

If the resolution is carried, the Court may, but need not, grant applications; but if the resolution is not carried, the Court shall not grant any application during the said years in the said local option areas.

The Act of 1912 provided that a local option vote following on an application for a license might be taken in any of the years 1913, 1914, and 1915 in a local option area, but having been taken once should not be taken again during those years in the same local option area. During 1913 a vote was taken in 10 districts on the resolution "that new licenses be granted." In five of these, the resolution was carried, the other five districts declaring against any increase in the number of licenses.

(ii.) *Continuance of Present System until 1916.* With the exception of the third resolution, viz., "that no new licenses be granted," the local option provisions of "The Licensing Act of 1885" remain in full force and effect until the 31st December, 1915, with certain modifications and additions. These will be found fully described in previous issues of the Year Book (see No. 6, p. 1177).

(iii.) *General Local Option.* The first vote may be taken in the year 1916, on the same day as the election of senators takes place, and the vote will be by ballot.

The vote will be taken on the request of one-tenth of the number of electors in an area, which is defined in the request, and such area may be:—(a) an electoral district, (b) an electoral division of an electoral district, or, (c) a group of two or more divisions of an electoral district, provided that the whole of such local option area is wholly comprised within one and the same electoral district.

There must be a separate request for each resolution on which a vote is required to be taken.

The resolutions on which a vote may be taken are:—(a) reduction by one-fourth of the existing number, (b) further reduction by one-fourth of the existing number, (c) further reduction by one-fourth of the existing number, (d) prohibition, and (e) new licenses.

In previous issues of the Year Book (see No. 6, p. 1178) will be found fuller reference to the effect of the carrying of any of these resolutions.

5. **South Australia.**—In this State the subject of local option is now regulated by Part V. of the Licensing Act 1908.

Under this Act, each electoral district for the House of Assembly is constituted a local option district, and each electoral district may be divided into local option districts by proclamation of the Governor. A quorum consisting of 500 electors, or one-tenth of the total number of electors, whichever be the smaller number, in any district may petition the Governor for a local option poll. The persons entitled to vote at the poll are those whose names appear on the electoral roll and who reside in the local option district.

The resolutions to be submitted under the Act, together with the effects such resolutions would have, are set out in detail in previous issues of the Year Book (see No. 6, p. 1179).

*Local Option Polls.* On the 2nd April, 1910, local option polls were taken under the Act of 1908 in twenty-four districts; the electors in the remaining nine local option districts did not petition for polls. A resolution that the number of licenses be reduced, was carried in only one district, Wallaroo; in the remaining 23 districts a resolution that the number of licenses be not increased or reduced, was carried. At the General Election of the House of Assembly held on the 10th February, 1912, no local option polls were held in any local option district.

**6. Western Australia.**—The law relating to local option in Western Australia is contained in Part V. (sections 75 to 86) of the Licensing Act 1911, which was assented to on 16th February, 1911, and came into force on the 7th April following. Prior to the passing of this Act there was no provision for any system of local option in Western Australia.

The resolutions to be submitted under the above-mentioned Act and the effect such resolutions would have, are given in detail in previous issues of the Year Book (see No. 6, p. 1180).

The first vote under the Act of 1911 was taken on 26th April, 1911, the main question being confined (as prescribed by the Act when the vote is taken prior to 1920) to a resolution "that the number of licenses be increased," the only other questions submitted being those of State control of new publicans' general licenses and State management throughout all licensing districts.

The following table shows the result of this local option poll:—

**WESTERN AUSTRALIA.—RETURN SHEWING THE RESULT OF LOCAL OPTION  
POLL OF 26th APRIL, 1911.**

| Result of Local Option Poll.   |  | Do you vote that all new Publicans' General Licenses be held by the State. |        | Are you in favor of State Management throughout all Licensing Districts. |        |
|--|--|--|--------|--|--------|
| Votes given in favor of the number of Licenses in the various districts being increased. | Votes given in favor of the number of Licenses in the various districts not being increased. |  |        |  |        |
|  |  | Yes  | No.    | Yes.   | No     |
| 4,554  | 17,623   | 27,007   | 14,887 | 26,631   | 14,944 |

Under the 1911 Act a second poll was due on 26th April, 1914, but an amending Act was passed in December 1913, continuing the present conditions until April 1915.

**7. Tasmania.**—In this State the subject of local option is dealt with in Part VI. (sections 72 to 84) of the Licensing Act 1902, as subsequently amended by section 8 of the Licensing Act 1908, which later Act, however, does not come into full operation until the first of January, 1917. Other Acts which formerly dealt with the subject, but now repealed, are the Licensing Acts 1889 and 1890, the Inn Keepers Relief Act 1894, and the Licensing Act Amendment Act 1898. Under the Act of 1902, opposition to the grant of a license may be made (i.) by any resident ratepayer, (ii.) by petition of rate-payers resident in the neighbourhood, or (iii.) by local option poll.

The conditions under which applications may be made to the Licensing Bench opposing the granting of licenses, are set out in detail in previous issues of the Year Book. (See No. 6, p. 1181.)

*Local Option Poll.* Any number of ratepayers, not less than seven, resident in the neighbourhood of the house in respect of which a provisional certificate or an hotel license has been applied for, may require, by petition lodged with the Clerk of Petty Sessions, that a poll of the ratepayers resident in the neighbourhood be taken upon the question whether such provisional certificate be granted or not. If a majority of the votes taken be against the granting of the certificate the Licensing Bench must refuse to grant it.

Particulars as to operations under Part VI. of the Act are not available.

## § 7. Preferential Voting.

In previous issues of the Year Book, a description in detail has been given of the systems of preferential voting now in force in the States of Victoria, Queensland, Western Australia and Tasmania. It is not intended to repeat the description in the present issue.

## § 8. Valuation of Commonwealth Production.

The want of uniformity in methods of compilation and presentation of Australian statistics renders it an extremely difficult task to make anything like a satisfactory valuation of the various elements of production. At present there is so little accurate statistical knowledge regarding such industries as forestry, fisheries, poultry, and bee-farming, that any valuation of the production therefrom can only be regarded as the roughest approximation. As a matter of fact complete information as to value of production in all States is available in regard to the mining industry alone, and even in this case adjustments have to be made before the returns are strictly comparable. Careful estimates have been made in connection with the value of production from the agricultural and pastoral industries, which, it is believed, in the main give fairly accurate results. In the case of manufactories, prior to 1909, five of the States collected statistics of the value of production, while for the sixth State, Tasmania, an estimate has been prepared which it is believed gives a fair approximation. The returns given in the following table are fuller and more approximate than those which have been given previously, and the returns collected in 1909 and subsequent years, however, may be taken as substantially correct. The table hereunder shews the approximate value of the production from all industries during the years 1906 to 1912 :—

ESTIMATED VALUE OF PRODUCTION FROM INDUSTRIES, 1906 to 1912.

| Year     | Agriculture | Pastoral. | Dairy, Poultry, & Bee-farming. | Forestry and Fisheries. | Mining. | Manufacturing.* | Total.  |
|----------|-------------|-----------|--------------------------------|-------------------------|---------|-----------------|---------|
|          | £1000       | £1000.    | £1000.                         | £1000.                  | £1000.  | £1000.          | £1000.  |
| 1906 ... | 25,349      | 45,389    | 13,611                         | 4,879                   | 26,622  | 33,205          | 149,055 |
| 1907 ... | 30,500      | 50,660    | 15,584                         | 4,826                   | 28,301  | 36,155          | 166,026 |
| 1908 ... | 37,150      | 47,259    | 15,045                         | 4,286                   | 24,580  | 36,637          | 164,957 |
| 1909 ... | 41,056      | 50,864    | 15,064                         | 4,462                   | 23,039  | 39,713          | 174,198 |
| 1910 ... | 39,752      | 56,993    | 17,387                         | 4,789                   | 23,215  | 45,598          | 187,734 |
| 1911 ... | 38,774      | 50,725    | 19,107                         | 5,728                   | 23,480  | 50,767          | 188,581 |
| 1912 ... | 45,754      | 51,615    | 20,280                         | 6,432                   | 25,629  | 57,022          | 206,732 |

\* These amounts differ from those given in Section XIII., Manufacturing Industries, owing to certain products which are there included having been included in Dairy Farming and Forestry in this table.

The total production from all industries during 1912 was £206,732,000, equal to an average of £44 10s. 2d. per inhabitant.

In Year Books Nos. 1 to 5 will be found the value of production in each State at decennial intervals since 1871, and for the year 1909. Details for individual States are not available for subsequent years owing to discontinuance by Customs Department of collection of statistics of interstate trade.

## § 9. Norfolk Island.

**1. Area, Location, etc.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude  $29^{\circ} 3' 45''$  south, longitude  $167^{\circ} 58' 6''$  east. Its total area is 8528 acres, the island being about 5 miles long and 3 miles wide. From Sydney it is distant 930 miles, and from New Zealand 400 miles. The coast line is 20 miles, and its form that of an irregular ellipse. Except on the south-west, inaccessible cliffs rise from the water's edge. The climate is equable, and the average annual rainfall 43 inches.

**2. Settlement.**—The first colonisation, in 1788, was by Lieutenant King, who in H.M.S. *Sirius* established a small penal station as a branch settlement of that at Port Jackson. The settlement was abandoned in 1806, and thence for 20 years its chief use was as a whaling station and place of call for British warships.

From 1826 to 1855 it was again made a penal station. In 1844 it was annexed to Van Diemen's Land (Tasmania).

The descendants of the *Bounty* mutineers having become too numerous to subsist on Pitcairn Island were removed thence to Norfolk Island in 1856. The new community numbered 193, 94 males and 99 females, and were the descendants of British sailors and Tahitian women.

In 1856 the island was severed from Tasmania, and created a distinct and separate settlement under the jurisdiction of New South Wales. In 1897 it was made a dependency under the Governor of that Colony, and is now administered by the Chief Secretary's Department through a resident Chief Magistrate, in whom is vested the executive government of the settlement, and the penal supervision of its affairs. In 1913, however, a Bill was passed by the Federal Parliament providing for the taking over of the Island as a territory of the Commonwealth. The Act will come into force on July 1st, 1914. The Island will then be administered by the Department of External Affairs, through an Administrator and Chief Magistrate.

**3. Population.**—The census population (3rd April, 1911) was 568 males, 417 females, total 985.

**4. Production, Trade, etc.**—In 1913 the imports from the Commonwealth were valued at £7612, the exports at £1127. The chief articles sent to the Commonwealth were skins, £338; oils £277; raw coffee, £147. There is little other production. A monthly steam service is maintained with Sydney; other communication is irregular. The "all red" cable from Great Britain *via* Vancouver, Fanning Island and Fiji, bifurcates at Norfolk Island, one line connecting with New Zealand, the other with Brisbane.

**5. Social Condition.**—Education is free and compulsory, and there is a public school under the State Department of Public Instruction, and with standards corresponding to the State public schools.

The magistrate's court has criminal jurisdiction in all crimes except capital offences, civil jurisdiction in all matters, and authority to grant probate and letters of administration.

Dealings with Crown lands are in the hands of the Governor alone.

## § 10. Lord Howe Island.

1. **Area, Location, etc.**—Between Norfolk Island and the Australian coast is Lord Howe Island in latitude  $31^{\circ} 30'$  south; longitude  $159^{\circ} 5'$  east. It was discovered in 1788. The total area is 3220 acres, the island being seven miles in length and from one half to one and three-quarter miles in width. It is distant 436 miles from Sydney. The flora is varied and the vegetation luxuriant, with shady forests, principally of palms and banyans. The highest point is Mount Gower, 2840 feet. The climate is mild and the rainfall abundant.

2. **Settlement.**—The first settlement was by a small Maori party in 1853; afterwards a colony was settled from Sydney. Constitutionally it is a dependency of New South Wales, and is supervised by a visiting magistrate.

3. **Population.**—The population at the Census of 3rd April, 1911, was 56 males, 49 females, total 105.

4. **Production, Trade, etc.**—The principal product is the seed of the native or *Kentia* palms. A monthly steamship service is maintained with Sydney. The lands belong to the Crown. The occupants pay no rent, and are tenants on sufferance.

## § 11. Some Native Australian Fodder Plants.

In Year Book No. 6, p. 1190, will be found an article on "Some Native Australian Fodder Plants," by J. H. Maiden, Esq., F.L.S., Director of the Botanic Gardens, Sydney. It is not intended to reproduce the article in the present issue of the Year Book.

## § 12. Interstate Conferences.

1. **Premiers' Conference, 1914.**—In March, 1914, a conference of State Premiers was held in Melbourne, at which a number of matters of interstate interest were discussed. On the subjects of Uniform Railway Gauge, Electoral Uniformity, and other questions affecting both Commonwealth and States, the Commonwealth was represented at the Conference by the Prime Minister and other Members of the Commonwealth Cabinet. The following is a summary of the resolutions agreed to:—

*Dominions Housing.* Resolved: That this Conference approves of the proposal to provide accommodation for the housing of the Oversea Dominions upon the Aldwych site in London.

*British Science Association (Railway Passes and Hospitality generally).* Resolved: That, in the opinion of this Conference, the amended proposals of the Commonwealth relating to the British Science Association should be concurred in by the States.

*Uniform Standards for Foods and Drugs.* Resolved: That, in the opinion of this Conference, uniform legislation or regulation in pursuance of the decision of the Conference of June, 1913, on Uniform Standards for Foods and Drugs, should be approved by each State as early as practicable.

*Panama Exposition—Representation at.* Resolved: That this Conference approves the representation of Australia at the Panama Exposition, and urges the co-operating States to forthwith appoint their Commissioners.

*Uniform Railway Gauge.* Resolved: That the States agree to refer to the Interstate Commission the question of a uniform railway gauge for Australia for report whether it is desirable to adopt a uniform railway gauge; and, if so, when and what gauge should be adopted.

And, further, that the Commonwealth and the States agree to refer to the said Commission the following questions:—

1. What benefits will result—(a) to the Commonwealth; (b) to each of the States?
2. What will be the cost of the conversion?
3. In what manner and to whom shall such cost be apportioned?

*Transferred Properties Questions—(A) Payment by Commonwealth for Services rendered by States.* Resolved: That this Conference affirms the principle that services rendered to the Commonwealth by the States, and *vice versa*, should be paid for.

*Transferred Properties Questions—Payment of Interest on Transferred Properties from the Date of such Transfer to the Commonwealth.* Resolved: That this question be referred to a Committee of the legal members of the Conference for consideration and subsequent report to the Conference.

Resolved: That, whilst the Conference considers that on a strict interpretation of section 89 of the Constitution Act, under which the Commonwealth is apparently acting, the Queensland Government is unable to effectively assert a claim for interest for the period prior to the commencement of the present financial arrangements, it feels that the claim is worthy of favorable consideration.

*Transferred Properties Questions—Payment of Capital Money for Transferred Properties.* Resolved: That arrangements for the settlement of the capital debt on transferred properties should be made without delay by the Commonwealth to the States.

*Transferred Properties Questions—Re-transfer of Properties from the Commonwealth.* Resolved: That, in the opinion of this Conference, the re-transfer of properties transferred under section 85 of the Constitution should not be accepted by the States, except by mutual agreement between the States and the Commonwealth.

*States Savings Banks in relation to the Commonwealth Savings Bank.* Resolved: That, in order to terminate the disadvantages arising from the competition between the States Savings Banks and the Commonwealth Savings Bank, and secure the advantages which will follow upon an increased recognition of the national character of the Commonwealth Bank, it is resolved that in consideration of the Commonwealth Bank withdrawing from the Savings Bank business the States are willing to allow the Savings Bank deposits now held by the Commonwealth Bank to remain on fixed deposit with the Commonwealth Bank, and to become responsible, through their Savings Banks or otherwise, for the repayment of such deposits, and will further undertake at their earliest convenience and as far as practicable to transact their State banking business with the Commonwealth Bank.

Resolved: That, with a view to the early completion of such an agreement, the State Treasurers should confer with the Commonwealth Treasurer as early as possible.

*Relation of Commonwealth to Immigration; and Assistance that may be arranged with the States.* Resolved: That the various immigration questions on the agenda paper be referred to the available immigration experts of the States for consideration and subsequent report to the Conference.

*Electoral Uniformity between the Commonwealth and States.* Resolved: That the proposals of the Commonwealth Government relating to electoral uniformity be referred to the Governments of the States for early consideration and decision.

*State Debts—Transfer of.* Motion: That this Conference declares its readiness to co-operate with the Government of the Commonwealth in effecting an early transfer of the debts of the States, upon the conditions suggested by the Federal Treasurer, with the following amendments, viz.:—

1. That the entire control and management of future conversion and new loan transactions of the Commonwealth and the States be placed in the hands of a National Debts Commission of five members, two appointed by the Commonwealth, and three by the States; and
2. That existing sinking or redemption funds be not transferred to the Commonwealth.

Resolved: That the debate on this motion be adjourned, and that the proposals referred to therein be referred to a Treasurers' Conference.

*Ocean Lights and Marine Marks in Australia.* Resolved: That the proposals of the Commonwealth Government relating to ocean lights and light dues be referred for the early and serious consideration of the respective Governments of the States.

*Gold Coinage—Assumption of Control by Commonwealth.* Resolved: That this Conference approves of taking over the Mint and of gold coinage by the Commonwealth—the States of New South Wales and Victoria to compensate, on an equitable basis, the State of Western Australia.

*Opening up another English Port.* Resolved: That the States as a whole cannot agree at this stage. It is suggested that the matter be further considered by New South Wales, Victoria, and South Australia.

Resolved: That the States co-operate in the endeavour to establish new services with the Eastern ports of the United States of America, and that all necessary inquiries be made to this end.

*Issue of Passes to Officers accompanying Ministers.* Resolved: That Ministers visiting other States on public business at other than Conference times to be entitled to pass one public officer over the railways free of charge, and during Conference times officers accompanying Ministers to receive passes.

*Railway Passes to Delegates to Conferences of the Blind.* Resolved: That the States approve of the issue of passes for four (4) representatives of each State for annual conferences.

*Bulk Handling of Grain.* Decided that the question of bulk handling of grain cannot be the subject of a resolution.

*Representation of the Commonwealth at the Royal Scottish Arboricultural Society's Diamond Jubilee.* Resolved: That the States do not desire to be represented at the Scottish Arboricultural Diamond Jubilee, to be held in June, 1914.

*International Exhibitions.* Resolved: That the Convention recommendations be approved.

*Uniform Valuations for State, Municipal, and Commonwealth purposes.* Resolved: That the Conference affirms the desirability of uniform valuations for Commonwealth and State purposes being adopted as early as practicable, and that the necessary legislative or administrative steps in that direction be taken by the States.

*Border Migration.* Resolved: That, in the opinion of this Conference, the New South Wales and Victorian Governments should be urged to continue existing arrangements for the checking of border migration at Albury.

*Imperial Timber Bureau in London—Establishment of.* Resolved: That, in the opinion of this Conference, the time is not ripe for concerted action in connexion with the proposed Imperial Timber Bureau in London.

*Quinquennial Census.* Resolved: (1) That, in the opinion of this Conference, the Government of the Commonwealth should be urged to take, in the year 1916, an interim census limited to name, locality, and sex, as recommended by the conference of State Statisticians.

(2) That the attention of the Prime Minister be drawn to the estimate furnished by the New South Wales Statistician of the cost of such a census, viz., £65,000 approximately.

*Interstate Trade Statistics.* Resolved: That, in the opinion of this Conference, the Commonwealth Government should be urged to resume the collection of statistics of interstate trade.

*Railway Passes to ex-Ministers of Commonwealth.* Resolved: That, in the opinion of this Conference, the granting of passes to ex-Ministers of the Commonwealth should be made the subject of arrangement between the Commonwealth Government and the States in each individual case as it arises.

*Present System of Issuing Railway Passes to Wives of Members of Parliament.* Resolved: That, in the opinion of this Conference, the issue of free passes in favour of the wives of members of other State Parliaments should cover sleeping-berth accommodation.

*Recommendations of Conference of State Commissioners of Taxation.* Resolved: That the Conference cannot see its way to finally deal with the recommendations of the Interstate Commissioners of Taxation in respect of double payment of income tax, but recommends the matter to a conference of State Treasurers to be held before the assembling of the next Premiers' Conference.

*Precedence of British Naval Officers (case of Admiral Patey).* Resolved: That, in the opinion of this Conference, the matter of precedence to be granted to British naval officers commanding on the Australian station is one to be determined by His Majesty's representatives in each individual State.

*Uniform Company Law.* Resolved: That, in the opinion of this Conference, it is desirable there should be a uniform Company Law throughout the Commonwealth, and that this law should follow the English Companies Act as far as practicable.

The Attorney-General of New South Wales to forthwith prepare a Bill for submission to the Attorneys-General of each State, with a view to its early enactment in each of the States.

*American Meat Trust.* Resolved: That the States respectively continue inquiries into the alleged existence and effects of a Meat Combine in Australia, and also continue to consult together and interchange information thereon, and, if necessary, take combined legislative action to regulate the operations of the alleged and similar trusts.

*Jewellery—Hall Marking of.* Resolved: That, in the opinion of this Conference, it is desirable that the States should make proper provision for the hall-marking of gold and silver jewellery by uniform legislation in each of the States.

The Attorney-General of South Australia to forthwith prepare a Bill for submission to the Attorney-General of each State, with a view to its early enactment in each of the States.

*Gold Buyers—Uniform Legislation re.* Resolved: That it is desirable there should be uniform legislation with regard to the purchase and sale of gold, silver, and precious stones throughout the Commonwealth, and that such legislation should follow the Acts of Western Australia and Victoria.

The Attorney-General of Victoria to forthwith prepare a Bill for submission to the Attorneys-General of each State with a view to its early enactment by each of the States.

*Compulsory Acquisition of Crown Lands by Commonwealth.* Resolved: That the States object to the exercise of compulsory powers for the acquisition by the Commonwealth from the States of Crown lands.

*Footwear Regulation.* Resolved: That it is desirable there should be uniform legislation with regard to the manufacture and sale of footwear throughout the Commonwealth, and that the Law Officers of New South Wales and Victoria consult together and prepare a Bill to regulate such manufacture and sale for submission to the Parliaments of all the States. The conduct of such matter to be with New South Wales.

*Double Probate Duties.* Resolved: That this Conference is of opinion that double probate or succession duties should not be charged upon the estates of the deceased persons, and that the Commissioners of Taxes be requested to complete their inquiries with regard to the principles on which personal property is assessable to death duty. On completion of such inquiries it be left to the Attorney-General of Queensland to prepare and circulate suggested legislation for introduction in the various State Parliaments.

*Interchange of Powers and Reciprocal Assistance by Masters-in-Lunacy of the several States.* Resolved: That the several States pass legislation whereby the Lunacy Authority in the State in which a lunatic has property be empowered, at the request of the Lunacy Authority of a State in which the lunatic is confined, to deal with such property.

*Consular Appointments.* Resolved: That the practice in regard to the Consular appointments in the States which obtained, prior to 1911, under which the State Ministry took full responsibility in connexion with these appointments, be adhered to.

*Relation of Commonwealth to Immigration; and Assistance that may be arranged with the States.* Resolved: That this Conference has received with gratification the intimation made by the Commonwealth Government of its readiness to contribute a sum of £150,000 per annum to further the interests of immigration. Having regard to the various matters of policy, which will require to be considered in detail, the Conference agrees that the matter should form the subject of correspondence between the States, initiated by the Premier of New South Wales, as to the lines which should be adopted to allocate a definite function to the Commonwealth, as desired by the Prime Minister.

*Medical Inspection of Immigrants.* Resolved: That this Conference is of opinion that the regulations relating to the medical inspection under the Immigration Acts 1901-12, as proposed by the Commonwealth Government, will operate to impede the work of recruiting immigrants in Great Britain and elsewhere, and strongly urges that they should be modified in the directions which have been recommended by the Agents-General in consultation with States' emigration representatives in England; with the additional safeguard of a more rigorous examination of passengers at the port of embarkation by medical referees, to be appointed by the Commonwealth Health Bureau in Great Britain.

*Duty on Imported Superphosphates.* Resolved: That, whilst sympathising with the views of the South Australian representatives, this Conference feels that the question raised is one purely for the consideration of the Federal Parliament.

*Treasurers' Conference—Date of Meeting.* Resolved: That the convening of a conference of State Treasurers as early as possible be entrusted to the Premier of New South Wales.

**2. Murray River Waters Conference.**—On the occasion of the Premiers' Conference referred to above, the Premiers of New South Wales, Victoria, and South Australia, together with the Prime Minister of the Commonwealth, entered into the following agreement relative to the Murray River Waters. (See also p. 510.)

*Resolutions agreed to by the Prime Minister of the Commonwealth of Australia and the Premiers of the States of New South Wales, Victoria, and South Australia:—* With a view to the economical use of waters of the River Murray and its tributaries, for irrigation and navigation, and to the reconciling of the interest of the Commonwealth and the riparian States, it is resolved that an agreement between the Commonwealth and States of New South Wales, Victoria, and South Australia (herein called "this Agreement") be entered into, providing:—

(i.) That a system of storages be provided at Cumberoona or some other suitable site on the Upper Murray and at Lake Victoria, and that weirs and locks be constructed in the course of the River Murray from its mouth to Echuca; in the River Murrumbidgee from its junction with the River Murray to Hay, or alternatively to works in the River Murrumbidgee, an equivalent extent of weirs and locks in the River Darling, extending upstream from its junction with the River Murray.

(ii.) That the cost of the undermentioned works required to give effect to Resolution (i.), and estimated as follows:—

|  |        |            |
|--|--------|------------|
| Nine weirs and locks from Blanchetown to Wentworth   | ...    | £865,000   |
| Seventeen weirs and locks from Wentworth to Echuca   | ...    | 1,700,000  |
| Nine weirs and locks from the junction of the Rivers Murray and Murrumbidgee to Hay, or alternately an equivalent amount (£540,000) in locks and weirs from the junction of the River Darling with the River Murray upstream | ...    | 540,000    |
| Upper Murray storage   | ... .. | 1,353,000  |
| Lake Victoria storage  | ... .. | 205,000    |
|  |        | <hr/>      |
|  |        | £4,663,000 |
|  |        | <hr/>      |

be borne to the extent of £1,000,000 by the Commonwealth, and as to the remainder in equal shares by the States of New South Wales, Victoria, and South Australia.

(iii.) That, if so desired by the State of New South Wales, there shall be substituted for the proposed weirs and locks in the River Murrumbidgee locks and weirs to the same estimated cost in the River Darling upstream from its junction with the River Murray.

(iv.) That the flow of the River Murray at Albury, including the natural or regulated flow of the Rivers Mitta and Kiewa, and as regulated by the Cumberoona storage, be shared equally by New South Wales and Victoria, subject to any quantity hereby agreed to be sent down the river for riparian use and for supply to South Australia.

(v.) That New South Wales and Victoria each have full use of her own tributaries below Albury, and have the right to store and divert the flows thereof, or alternatively, equivalent volumes from the River Murray below their affluences subject to provision from such tributaries, or her share of the flow at Albury, or both, of contributions towards the share hereby allotted to South Australia, and the allowance for riparian use on the main stream from the affluence of such tributary, or from Albury to Lake Victoria.

(vi.) That the proportion of the contribution by New South Wales and Victoria to the share hereby allotted to South Australia, and for riparian use in the main stream, be that which the mean natural flow of the tributaries of each State below Albury measured at the points of affluence with the River Murray, with half the actual mean flow at Albury added in each case bear to each other. In calculating the mean flow of the River Darling for this purpose a deduction shall be made to the extent of any water diverted by the State of Queensland.

(vii.) That the minimum quantity to be allowed to pass to South Australia in each year be sufficient to fill Lake Victoria storage once, and in addition to maintain, with the aid of the water returned from Lake Victoria, a regulated supply at Lake Victoria outlet of 134,000 acre feet per month during the months of January, February, November, and December; 114,000 acre feet per month for the months of March, September, and October; 94,000 acre feet per month for the months of April, May, and August, and 47,000 acre feet per month for the months of June and July, these being the provisions for irrigation equivalent to a regulated supply of 67,000 acre feet per month for nine months, and for domestic and stock supply, losses by evaporation and percolation in Lake Victoria, like losses and lockage in the river from Lake Victoria to the river mouth (but not including Lakes Alexandrina and Albert). Provided that these allowances and the allowance to the upstream States be reduced *pro rata* in such abnormal seasons as those of 1902 and 1903.

(viii.) That after the utilization by South Australia for irrigation of the volumes set forth in Resolution (vii.), or after the utilization by New South Wales and Victoria of 1,957,000 and 2,219,000 acre feet per annum respectively, whichever may first happen, a further volume may be allotted out of any surplus over the above specified allotments to the State of New South Wales, Victoria or South Australia, as the case may be, such further volumes to be determined by the Commission provided for herein.

(ix.) That the agreement entered into between the Premiers of New South Wales, Victoria, and South Australia, dated the 12th day of January, 1912, respecting storage works at Lake Victoria and certain works in, on, and near the River Murray, be confirmed, subject, however, to the modifications arising out of this agreement.

(x.) That the cost of any works jointly constructed by the States of New South Wales and Victoria in the River Murray above Echuca, for the purpose of diversion of water allotted to them under this agreement, shall be borne by the States of New South Wales and Victoria in proportion to the volume of water proposed to be diverted into each of said States by such works.

(xi.) That a Commission of four members to be called the River Murray Commission be appointed immediately after the ratifying of this agreement by the Commonwealth and States Parliaments concerned, one commissioner to be appointed by the Governor-General of Australia, one by the Governor of New South Wales, one by the Governor of Victoria, and one by the Governor of South Australia. The Commission shall carry into effect the provisions of this Agreement.

(xii.) That the works provided for in Resolution (ii.) be constructed by the State of South Australia from Blanchetown to Wentworth, by the State of New South Wales on the Murrumbidgee or Darling, as the case may be, and by the States of New South Wales and Victoria on the River Murray, under the direction of the Commission provided for herein and subject to the approval of all designs by the said Commission.

(xiii.) That the construction of the works mentioned in Resolution (ii.) of this agreement shall be commenced by each of the States, as provided in Resolution (xii.), as soon as may be after the ratification of this agreement by the Parliaments of the Commonwealth and the States respectively, and vigorously proceeded with until completion.

(xiv.) And that this agreement be submitted for ratification to the Parliaments of the Commonwealth and the States respectively during the next sessions of the said respective Parliaments, and is subject to such ratification.

**3. Treasurers' Conference.**—In accordance with the resolution passed by the Premiers' Conference previously referred to, a meeting of State Treasurers was held in Melbourne in May 1914. With reference to the question of the Commonwealth Bank in relation to the States Savings Banks, the following resolution was carried, and subsequently accepted by the Prime Minister on behalf of the Commonwealth :—

Resolved : That with a view to the termination of the present competition of the Savings Banks of the Commonwealth and of the States of New South Wales, Victoria, Queensland and South Australia, on a date to be determined as hereinafter proposed, the following proposals be submitted to the Commonwealth Government :—

- (1) With respect to the States of New South Wales, Victoria, and South Australia, there be transferred to the Commonwealth Bank a share equal to at least 60 per cent. of the current banking accounts of such States at the expiration of the period necessary for the termination of present agreements, this share of the banking business to include a proportionate part of the exchange business, both interstate and London. The remaining 40 per cent. of such business to be transferred upon the Commonwealth Bank undertaking 10 per cent. of the underwriting of new loan flotations if required to do so, and making satisfactory provision for the discharge of the business of the States, in all parts of the States, on terms and conditions as favourable as those existing at present.
- (2) With respect to the four States before named, there be continued with the Commonwealth Bank as fixed deposits, for a period of ten years or a shorter period at the option of the Commonwealth, from the date of the withdrawal of the Commonwealth from Savings Bank business, and thereafter, as mutually agreed upon between the Commonwealth and the individual States, a sum equivalent to the sum held by the Commonwealth Bank as Savings Bank deposits at such date. The interest payable on such deposits by the Commonwealth Bank to each of the respective States to be the interest paid by each State, plus the average working expenses of the Savings Bank of such State.

- (3) With respect to the State of Queensland, which is at present bound by agreement to continue its current account business with the Queensland National Bank until 30th June, 1921, the State to deposit at current rates of interest within 12 months from a date to be fixed, the sum of £250,000 as a further fixed deposit with the Commonwealth Bank, and to increase that sum to a total of £500,000 within three years from such date. In the event of the agreement with the Queensland National Bank being terminated by mutual consent at a date earlier than 30th June, 1921, Queensland to transfer her current account business to the Commonwealth Bank at such earlier date, but, otherwise, on 30th June, 1921. Such transfer to be either 60 per cent., or the total of her current account, in accordance with the arrangements existing between the Commonwealth Bank and the States of New South Wales, Victoria, and South Australia at the time of such transfer, and on completion of such transfer of current accounts such further fixed deposit to be released.

That the foregoing arrangements shall be effectuated by (1) preliminary legislation by the Commonwealth to be brought into operation by proclamation; (2) the necessary steps, administrative and legislative, being thereupon taken by the co-operating States; (3) the competition between the Savings Banks of the Commonwealth and the States ceasing by such proclamation in the four co-operating States concurrently with the transfer of current account business by the three States of Victoria, New South Wales, and South Australia.

#### ADDENDA.

- (1) The representative of Western Australia did not join in the foregoing resolutions, preferring for the present to seek full partnership between the Commonwealth and the States in all activities of the Commonwealth Bank.
- (2) The representative of Tasmania did not participate, as competition between Commonwealth and State Banks does not exist in that State, but expressed himself on behalf of his Government as willing to consider the resumption of Savings Bank business in the event of the Commonwealth withdrawing therefrom throughout the States.

In conjunction with the Commonwealth Treasurer, the State Treasurers also discussed the question of the Transfer of State Debts, and the following resolution was passed:—

Resolved: (1) That in the opinion of this Conference, the operations connected with the redemption of existing loans and of new flotations are so intimately connected that no scheme of debt transfer would be satisfactory which did not cover both.

(2) That at present no definite conclusion as to the best method of dealing with the transfer of control over future flotations can be formulated, the divergent views of the States being incapable of immediate reconciliation.

(3) That the Conference therefore recommends the matter to the careful consideration of the Federal and State Governments, with a view to further conference.

# APPENDIX.

Recent information and returns which have come to hand since the various sections of this book were sent to press, are given hereunder.

## SECTION XIV. WATER CONSERVATION AND IRRIGATION.

### § 3. Irrigation Plants.

3. **The Murrumbidgee Irrigation Scheme, p. 504.**—It has been decided to concentrate the waterworks on the northern and more compact area of the irrigable land. This will utilise all the water from the reservoir, and enable 250,000 acres to be irrigated as a consolidated area. In addition, the New South Wales Government is acquiring about 1,000,000. acres of non-irrigable land, to be allotted to settlers in conjunction with irrigated farms. It is estimated that the total cost of works and land will be about £5,500,000. When fully settled, the district will comprise about 7000 farms.

The designs for subdivision provide generally for centrally-situated towns, where the commerce of the settlement will be centralised. These townships are surrounded by approximate concentric rings of farms of two, five and ten acres. Outside these are the maximum irrigation farms of from 25 to 50 acres.

The two-acre farms, intended for the most intensive cultivation, have water rights double those of the larger areas. These small farms have a maximum capital value of £75 per acre. This at  $2\frac{1}{2}$  per cent. makes an annual rental of £3 15s. for a two-acre farm. The double water right of 24 in. over two acres brings the payment, all told, up to £4 15s. yearly.

In regard to the larger holdings, two of the highest class farms of 50 acres on the Leeton area are valued at £25 at  $2\frac{1}{2}$  per cent., but at 5 per cent. the value would be, of course, equivalent to £12 10s. per acre. Some of the land of a more adhesive nature, requiring more cultivation but withal excellent for varied crop production, is put down as low as £12 per acre at  $2\frac{1}{2}$  per cent., or £6 at 5 per cent. The Mirrool lands, where the soil is of the very best quality for producing crops under irrigation, the value goes up to £37 at  $2\frac{1}{2}$  per cent., or £18 10s. at 5 per cent. A butter factory has already been provided by the Commissioner at Leeton, the township for the Yanco lands. A bacon factory is being designed, the cost for the construction of which has been included on the estimates of Parliament for 1913-14. A demonstration fruit-canning and pulping plant has been established by the Commissioner, and further similar plants are proposed to be installed. A State Demonstration Farm is established on the areas, where various commercial plants are tested as to their suitability for cultivation, while from the State Nursery may be obtained horticultural stocks guaranteed true to name and free from disease.

The following figures shew the progress made up to April, 1914 :—

|   |     |     |     |             |
|---|-----|-----|-----|-------------|
| First farms granted                     | ... | ... | ... | July, 1912. |
| Farms granted to date                   | ... | ... | ... | 705         |
| Farms occupied to date                  | ... | ... | ... | 622         |

## SECTION XXV.

### GENERAL GOVERNMENT.

#### § 2. Parliaments and Elections.

1. **The Federal Parliament.**—On 5th June, 1914, the Prime Minister announced that a dissolution of both Houses of the Federal Parliament had been granted by the Governor-General under section 57 of the Commonwealth Constitution Act. This was the first instance of a double dissolution occurring since the Federation of the States on 1st January, 1901. At time of going to press, Parliament was engaged in discussing the question of supply, and the Prime Minister was, consequently, unable to announce the date of the general elections.

## SECTION XXVIII.

### DEFENCE.

#### § 1. Military Defence (p. 946).

3. **Visit and Report by Inspector-General of Oversea Forces.**—In 1914, General Sir Ian Hamilton, Inspector-General of Oversea Forces, visited Australia, and at the request of the Federal Government inspected the military forces and institutions of the Commonwealth. The chief matters noted by the inspecting officer were embodied by him in a report which he furnished to the Government at the end of his tour. Certain suggestions were made regarding phases of the training. Although some saving on present methods is deemed possible in respect of the present situation, the ultimate cost of the Australian army will be double what was originally anticipated. A new business department controlling finance, audit, supply, equipment, transport, remounts, barracks and works, and decentralisation and independence in district commands were advocated in order to simplify correspondence and returns. For maintaining the army in the field, depot cadres with experienced officers and non-commissioned officers were recommended to be established on mobilisation, as well as a reserve of technical and other experts. Emphasis is laid upon the necessity of undertaking the organisation of the nation for war—a matter regarded as quite distinct from the military training of its youth.
